Subject: Mathematics		Grade: 1		Term: 1		Week: 6-7			
TOPIC: Describe, compare, and order numbers. Sharing leading to fractions.		Content:		Time allocation:		Date started:		Date completed:	
Prior content knowledge: Learners should have the prior knowledge of counting numbers.		Lesson objectives: The learners must be able to: - Order numbers from 1 to 5 - Share equally - Understand the meaning of half			Vocabulary/ important words: small big Sharing			Teaching strategies: - Learner centered method - Question and answer session - Demonstrating - Collaboration	

Resources: • Chalkboard • Classwork books • Worksheets • Videos • Objects in the classroom	Teacher Activity • Teacher will introduce the lesson by playing a video showing a family with 4 siblings playing together • Teacher will ask the learners that who is older in these siblings, and why? • Teacher will explain that these siblings are not the same age, but there is an older followed by another, until the youngest one • Teacher will explain that numbers are also not equal , number 1 is the smallest followed by 2, as the numbers go higher the bigger they are • Teacher will have a container with counters inside. The teacher will write down a number and take out the same quantity of counters from the container • Teacher will continue doing this. Showing learners the quantity of different numbers from 1 to 4 • Teacher will write the number symbol on the board and ask learners to take out the counters that match or represent the number. • Teacher and the learners will continue doing this activity until the learners get it right Sharing • Teacher will bring 1 apple and ask learners whether they also want the apple. • Teacher then tell learners that there is only 1 apple. What must be done in order for everyone to get it? • Teacher will then cut the apple into 2 pieces, and tell learners that now she can share with 1 learner, cut the other piece	Learner Activity • Learners will watch the video of 4 siblings playing together • Learners will tell the teacher who they think is the older one. • Learners will say their reasons why they think such a sibling is older than others. • Learners discuss together with the teacher about these siblings • Learners will listen as the teacher teaches about small and bigger numbers • Learners will watch the teacher as she writes the number symbol on the board and take out the number of counters that represent that number. Sharing • Learners will listen to the teacher and respond • Learners will think and tell the teacher what can be done in order for everyone to get an apple	Assessment goal: • Learners will know how to count and write number symbols from 1-5. • Learners will know which number is smaller than the other Assessment strategy: Informal X Formal Assessment tool: • Rubric
