- ▶ Recording sheets

SUBJECT POLICY

subject policy Guidelines governing specific academic subjects.

Components:

1. Curriculum & Syllabus: Defines content and learning objectives.
2. Teaching Methods: Preferred instructional strategies.
3. Assessment: Criteria for evaluation and feedback.
4. Resources: Materials and tools to support learning.
5. Differentiation: Approaches for diverse learner needs.

Importance: Ensures consistency, quality, and ethical conduct.

Implementation: Professional development and periodic review.

D CAPS DOCUMENT

MATHEMATICS POLICY

1. PREAMBLE

Mathematics is a very important subject that uses symbols and notation to describe numbers. Teaching and learning of mathematics is in accordance with the SID D-CAPS curriculum. It helps to develop mental processes that enhance logical and critical thinking, accuracy and problem-solving techniques that will contribute in decision making.

2. PURPOSE

- Promotes enjoyment of learning through practical activity and exploring.
- Develops confidence and competence with numbers and number system / concepts
- To explore features of shapes, colours, patterns and developing measuring skills
- Help children understand the importance of Mathematics in everyday life.
- To develop conceptual understanding and ability to recall and apply knowledge accurately.
- To teach learners to apply their Mathematics to both routine and non-routine problems, including breaking down complex problems into simpler steps.
- To equip learners with strategies to enable them to apply mathematics to real and unfamiliar situations within and beyond the classroom.
- To master the basic 4 operation number sentences.
- To develop the skills, knowledge and understanding needed in daily life.

3. RATIONALE

The policy outlines the framework within which educators are given guidance on planning, teaching and assess learners. It is designed to describe how the school intends to meet the needs of mathematics learners of all ages. At Nokuthula special school we understand that Maths is both subjects in its own right and a medium for teaching a wider curriculum. Knowledge in Mathematics is essential in equipping all learners irrespective of their socio-economics back group race and gender. Learners to be able to use maths in real life situations In human activity that involves observing relationships, in physical and social phenomena and between Mathematical objects themselves. Mathematics is a broad structured that provides a way of viewing and understanding of numbers through the use of Mathematics, information can be: -

MATHEMATICS DCAPS POLICY DOCUMENT

- ▶ The Mathematics DCAPS policy document outlines guidelines and standards for teaching and learning mathematics in our school.
- ▶ The Purpose is to Ensures consistency, quality, and alignment with educational standards in mathematics education

[D CAPS DOCUMENT\CAPS SID Mathematics.pdf](#)

CONTENT AREAS AND WEIGHTINGS

Numbers, Operations and Relationships	55%
Patterns, Functions and Algebra	10%
Space and Shape (Geometry)	10%
Measurement	15%
Data handling	10%

LESSON PLANS

Objective

- State the main objective of the lesson

Learning Outcomes:

- List what students will achieve by the end
- Use bullet points for clarity

Lesson Structure:

Introduction: Brief intro and engagement hook

Activities: Describe main activities and methods

Assessment: Outline how learning will be assessed

Key Concepts: Highlight main topics covered

Resources: List materials and resources used

Contact Information: Optional: Your contact details

THE THREE LEVELS OF LEARNERS IN A CLASSROOM

1. High-Functioning Learners:

- Quick grasp of concepts, strong critical thinking skills.
- Require enrichment and advanced challenges.
- Benefit from independent and complex tasks.

2. Average Learners:

- Learn at a moderate pace with consistent effort.
- Need clear instructions and structured tasks.
- Benefit from varied learning approaches and practice opportunities.

3. Low-Functioning Learners:

- Require significant support and adaptations.
- Learn at a slower pace and may struggle with basic skills.
- Need simplified instructions, personalized attention, and patience.

Understanding these levels helps educators tailor their teaching strategies to meet the diverse needs of all students, fostering an inclusive and supportive learning environment.

LESSON ACTIVITIES

TERM 1

HIGH FUNCTION

Fill in the missing numbers.

AVERAGE FUNCTION

Fill in the missing numbers inside the caterpillars by counting forwards and backwards.

LOW FUNCTION

Trace the following numbers

LESSON ACTIVITIES

TERM 2

HIGH FUNCTION

Coloring Pattern

1) Color the pictures to show the pattern 'AAB':

2) Color the pictures to show the pattern 'AABB':

3) Color the pictures to show the pattern 'AB':

4) Color the pictures to show the pattern 'ABB':

5) Color the pictures to show the pattern 'ABC':

AVERAGE LEARNER

Fill in the missing numbers

LOW-FUNCTIONING LEARNERS

Complete the pattern by colouring the circle in the correct colour.

LESSON ACTIVITIES

TERM 3

HIGH FUNCTION

Count the number of objects in each set and circle the correct numeral.

9 2 1

8 4 3

7 5 6

2 3 1

4 7 8

AVERAGE LEARNER

Count the items and write the number in the box.

LOW FUNCTION

Fill in the missing numbers.

LESSON ACTIVITIES

TERM 4

HIGH FUNCTION

Fill in the missing numbers.

AVERAGE LEARNER

Write the missing numbers. 

1			4
	6		
9		11	12
13			16
		19	20

HIGH FUNCTION

Write the missing number for each set of ducks.

ASSESSMENT TASKS

LOW FUNCTION

Mathematics

Grade 1

Term 2 Low Support Group

Learners Name:

Educator: Innocent Mudzunga

Quality Assurer: P Manthata

Topic: 1 Numbers operations and relationship

Activity 1

Fill in the missing numbers.

Assessment tasks

HIGH FUNCTION

Mathematics Grade 1 Term 2 High Support Group

Learners Name:

Educator: Innocent Mudzunga

Quality Assurer: P Manthata

Topic: No 1 Numbers operations and relationship

Activity 1 Trace the following numbers

Assessment tasks

AVERAGE

Mathematics Grade 1 Term 2 Moderate Support Group

Learners Name:

Educator: Innocent Mudzunga

Quality Assurer: P Manthata

Topic: No 1 Numbers operations and relationship

Activity 1

Fill in the missing numbers inside the caterpillars by counting forwards and backwards.

Topic No 2 Patterns, Functions and Algebra

ASSESSMENT TOOLS

FOUNDATION PHASE GRADE 1

Mathematics Rubric - Formal

LEARNERS 'S NAME: _____

DATE: _____

EDUCATOR: Nomvula Mbatha

CLASS AND YEAR: _____

Group 1	1	2	3	4	5	6	7
	Encounter: The learner was in the room when it happened; they show no awareness or acknowledgement of the task going on. This could be for many reasons	Awareness: The learner is aware that there is something going on, depending on the level of the pupil, it could be a brief change in facial expression or a glance over while they are involved in their own activity	Attention: The learner is now listening or aware of what is going on and may want to react to events	Response: Depends on the level of the learner, there is some form of reaction. This could be a smile as something happens or a vocalization or even gestures	Engagement: The learner is now involved ready to join in, again depending on the level of the learner. Assistance is still needed – it could be use as full physical support, or it could be full verbal prompting, imitating etc.	Participation: There is not a large change from engagement, but it could be being more cooperative, even leading the activity with slightly physical support. If using verbal prompting, the amount of prompting is reduced	Involvement: The learner is more involved they may need no physical support perhaps a nudge or point to start them. With prompting, they again may only need a few words to help them achieve
Week 3 Count in one's forwards and backwards from any given number up to 5	The learner has no understanding on the subject	The learner is willing to try to count with help (repeat after the educator)	The learner can count to 2 and repeat the rest after the educator	The learner can count to 5 and backwards from struggles counting backwards	The learner can count to 5 and a fair attempt backwards	The learner can count to 10 and backward from 5	The learner can count to 10 and backward from 5 the learner exceeds requirements.
Week 4 Compare and recognise a collection of objects in terms of more and less	The learner has no understanding on the subject	The learner can order the objects with physical help	The learner can recognise the objects with clues and cues	The learner understands one of the attributes	The learner can recognise the objects mostly on own with little help	The learner can recognise the objects on own	The learner can recognise the objects on own and orally describes why it is less or more
Week 5 Collect and sort everyday concrete objects	The learner has no understanding on the subject	Learner tries to match the objects with help	Learner tries to sort at least 1 attribute with help	Learner tries to sort 2 attributes with help	Learner tries to sort all 3 attributes with little help	Learner sort objects to all 3 attributes on own but are still unsure at times	Learner can sort objects according to the 3 attributes on own initiative
Week 6 Recognise, identify and read number symbols 1- 5	The learner has no understanding on the subject	Learner can identify the number symbols with help	Learner can match the number symbols without help	Learner recognises the number symbols 1	Learner recognises number symbols 1 and 2	Learner recognises number symbols 1, 2, and 5	Learner recognises the number symbols and show is able to show quantity in fingers
Week 7 Compare the masses of different objects (heavy: light)	The learner has no understanding on the subject	The learner can order the objects with physical help	The learner can order the objects with clues and cues	The learner understands one of the attributes	The learner can order the objects mostly on own with little help	The learner can order the objects on own	The learner can order the objects on own-and orally describes why
Week 8 Recognise, identify and name 2D-shapes in the classroom and in pictures	The learner has no understanding on the subject	Learner tries to identify objects with help	Learner tries to identify at least 1 shape with help	Learner tries to identify 2 shapes with help	Learner tries to identify 3 shapes with little help	Learner sort identifies all 4 shapes on their own but are still unsure at times	Learner can identify all 4 shapes on own initiative.

CHECKLIST

Nokuthula Centre and Special School

NPO No: 001041

MATHEMATICS CHECKLIST

LEARNERS 'S NAME: _____ DATE: _____

EDUCATOR: **Nomvula Mbatha** CLASS AND YEAR: _____

Numbers, Operations and Relationships. Patterns, functions and algebra. Space and shape. Measurement. Data handling.	Level of performance					
	Excellent	Good	Fair attempt	Poor	None	N/A
Week 2						
Count in ones up to 10						
Understand the position of one object in relation to another e.g. on top of, in front of, behind, up, down, next to						
Week 3						
Count in ones forwards and backwards from any given number up to 5						
Identify patterns in clothes, objects and the environment						
Knows their age						
Week 4						
Compare and recognise a collection of objects in terms of more and less						
Collect and sort everyday concrete objects						
Week 5						
Recognise, identify and read number symbols 1- 5						
Recognise and identify 3D objects in the classroom e.g. box and ball shapes						
Week 6						
Solve problems with concrete objects equally amongst the 4 learners						
Compare the masses of different objects (heavy; light)						
Week 7						
Solve addition problems with answers up to 5						
Recognise, identify and name 2D- shapes in the classroom and in pictures						
Week 8						
Add the same number repeatedly up to 4						
Week 9						
Use vocabulary: full, empty (sand and water play)						
Understand empty and full						
Week 10						
Recognise symmetry in own body
