

GENERAL CERTIFICATE IN EDUCATION: TECHNICAL OCCUPATIONAL

PERSONAL AND SOCIAL WELLBEING LEARNER WORKBOOK

Year 1

NAME OF LEARNER: _____

CLASS: _____

TERM 1

Unit 1: Development of self

Positive Self Esteem.

Who are you?

Self-image is the idea you have about yourself. It includes your appearance and your personality. Your personal qualities, abilities and potential add to the picture you create about yourself.

You learn about your positive personal qualities, interests, abilities and potential from information provided by your friends and family. This includes:

- Your actions and behavior
- Your interests
- Your abilities
- Your achievements
- Other people's comments about you
- People you admire.

Your first relationship is usually with your family and you develop your views and beliefs through them. You also base your self-esteem on the events that happen to you. This explains why you believe certain things and why you react to things in certain ways.

- Having a positive self-image gives you confidence to meet other people, enjoy different experiences and develop new skills and talent.
- In this way you can fulfill your potential.
- Your self-image changes as you become more aware of your interests, abilities and potential.

Understand and respect physical body changes.

A dramatic change to your self-image will happen during puberty. The physical and emotional changes contribute to your picture of yourself, and the changes will be different for boys and girls. All these changes will have an impact on your relationships with your family and friends.

Many teenagers change as they grow older. Puberty is the stage when a child's body develops into an adult's body. It takes place over period of time between the ages of about 10 and 17. Sex refers to the biological characteristics of people that make them male or female. Gender refers to the characteristics that society expects people to have, depending on whether they are male or female. This is known as gender constructs.

The pituitary gland in the brain produces hormones, which are chemical substances. These hormones are responsible for the physical changes and moods experienced during puberty.

Most teenagers change their way of relating to their family and friends. This is partly due to the fact that they are becoming independent and are developing their own identity as a way of learning to become adults. They are busy working out who they are and where they fit in.

Understanding the changes.

Moodiness during puberty may cause conflict in the family. This is because teenagers can suddenly change from feeling happy to feeling sad or angry without warning.

Some teenagers tend to argue more with family members. The reason is not that they want to annoy them, but rather that they are starting to think differently. Just as their bodies are maturing, so are their minds.

It is natural for teenagers to become more interested in their friends. Many are influenced by their friends and want to be like them. Remember the changes you experience have an impact on your family and other people around you!

Understand other influences on body image: media and society and accepting yourself

Respect refers to a feeling of admiration for someone because of certain qualities or achievements.

Your idea of your body during puberty affects your self-image. You may compare yourself to your friends or to an idea of what you would like to look like. Society expects you to behave more responsibly towards yourself and towards others

because you are becoming an adult. You are expected to understand that you are responsible for your actions and decisions. This means you should respect the bodies of other teenagers as well as your own.

You might be tempted to experiment with things such as smoking, drinking alcohol and having sex. These activities create physical and emotional problems, as they carry serious consequences.

Puberty is a life-changing stage of development. Everyone goes through puberty. Talk to others. Ask someone older for advice. Speak to a friend who will understand how you feel. Share your experiences. In this way you learn to appreciate and accept yourself and appreciate others

Activity 1: Positive Self Esteem

1. Look at the following identity document. This document will help you to reflect on your self-esteem and the relationship you have with yourself. Fill in the blank spaces. (5)

Name and Surname	
Date of birth:	
Age:	
Nationality:	
Home language:	
Residential address:	
Family members:	
School:	
Friends:	
Physical description	

2. Paste a picture of yourself in one the space provided. In the other space give a sample of your fingerprint.

Your photo

Your fingerprint

3. Complete the following by writing about yourself: (3)

a. Things I enjoy doing:

b. The times I was most proud of myself:

c. Good things that have been said about me:

Total: 10

Unit 2: Health, social and environmental responsibilities: Food Hygiene

Importance of food hygiene

What is food hygiene?

Hygiene refers to conditions or practices conducive to maintaining health and preventing disease, especially through cleanliness.

Food hygiene are the conditions and measures necessary to ensure the safety of food from production to consumption.

Why is food hygiene important?

Without washing hands and kitchen tools, diseases may easily spread. Every day people get sick from the food they eat. Micro-organisms including bacteria, viruses and moulds found in food can cause food poisoning, leading to a whole host of unpleasant symptoms such as stomach pains, diarrhoea and vomiting.

The overall purpose of food hygiene is to prepare and provide safe food and consequently contribute to a healthy and productive society.

Within this overall aim, the specific objective for food hygiene is to:

- Prevent food spoilage
- Inform and educate people about simple and practical methods of keeping food safe to protect themselves against foodborne diseases
- Protect food from intentional contamination

Activity 2: Food Hygiene

1. Give the **definition** for the term food hygiene.

2. List 5 basic hygiene rules that **you** think we must follow in the kitchen when we are preparing food.

2.1. _____

2.2. _____

2.3. _____

2.4. _____

2.5. _____

3. Safe or Not? Look at the following pictures as say if they are safe to prepare or not.

Mould on cheese: _____

Fresh strawberry: _____

4. Choose the correct answer: (Underline the correct answer)

4.1. Without washing hands and kitchen tools, diseases may easily _____

4.1.1. Contaminate

4.1.2. Spread

4.1.3. Die

4.2. Micro-organisms including bacteria, viruses and moulds found in food can cause _____ poisoning.

4.2.1. Alcohol

4.2.2. Bacterial

4.2.3. Food

5. Fill in the missing words:

Hygiene refers to _____ or _____ conducive to maintaining _____ and preventing _____, especially through _____.

Understand the importance of proper food storage and preparation.

In order for you to get the best nutrition out of your food you need to make sure to store and cook it correctly. Most pre-packed foods have a nutrition label on the back or side of the packaging. They can help you choose between products, and keep a check on the amount of foods high in fat, salt and sugars that you're eating.

Nutrition information is provided per 100g and sometimes per portion of the food. You can use nutrition labels to help you choose a more balanced diet.

Most pre-packed food products also have a list of ingredients, storage - as well as cooking instructions on the packaging or on an attached label. The storage and cooking instructions insure that the product is properly stored and prepared. The ingredients list can also help you work out how healthy the product is.

Understand and identify safe and harmful ingredients in food preparation.

Always ensure that you follow the following rules in the kitchen when you are preparing food. These rules will help you to prepare the food in a clean environment and will help you to avoid foodborne illnesses.

Wash your hands often

Proper hand washing may eliminate a large percentage of food poisoning cases and significantly reduce the spread of the common cold and flu.

- Wash hands before, during and after meal preparation, after using the bathroom and after handling pets.
- Wash hands in warm, soapy water for at least 20 seconds.
- Don't forget to keep surfaces clean, including shelves, counter tops, tables, refrigerators and freezers.

Keep Ready-to-Eat Foods Separate from Raw Meat Poultry, Seafood and Eggs

When juices from raw meats or germs from unclean objects accidentally touch cooked or ready-to-eat foods such as fruits or salads, **cross-contamination** occurs.

- Prevent cross-contamination by keeping raw meat, poultry, seafood and eggs separate from ready-to-eat foods.
- Use two cuttings boards: one strictly for raw meat, poultry and seafood; the other for ready-to-eat foods like breads and vegetables.
- Wash cutting boards thoroughly in hot soapy water after each use or place in dishwasher.

Cook to Proper Temperatures

Fish, seafood, meat, poultry and egg dishes should be cooked to the recommended safe minimum internal temperature to destroy any potentially harmful bacteria.

- Always use a food thermometer to check the doneness of meat, poultry, seafood and dishes containing eggs.
- If you are using a recipe, make sure to follow the cooking instructions thoroughly.
- Do not consume food that is not properly prepared and cooked, it may lead to serious illness.

Activity 3: Food labels

Make use of the space below and paste a food label of your choice.

My food label:

Unit 3: Constitutional rights and responsibilities

Nation-building and cultural heritage

South Africa is made up of many different cultural groups and it is important for us to learn more about these groups and respect them.

What makes up culture? Ideas, traditions and behaviours all make your culture. This includes the way you are brought up, the history you are taught, the religion you practice and the way you express yourself through language, dress, dance, music, games, art and food.

Cultural diversity is when there are many different cultures living together in the same place. South Africa is made up of various cultural groups because of hundreds of years, people have moved to South Africa from other parts of the world.

Understanding the national symbols: Our flag, Anthem and Coat of arms.

Our flag:

Each colour in our flag has a meaning:

- Red: symbolizes bloodshed and sacrifices made in South Africa's struggle for independence
- White: stands for Europeans & peace and harmony between natives and Europeans
- Green: represents fertility of South African land
- Yellow: stands for the mineral and other natural wealth of South Africa
- Black: represents native people of South Africa
- Blue: stands for blue sky and endless opportunities for South Africans

The Y stands for the convergence of diverse elements within South African society, taking the road ahead in unity.

Our anthem:

Original Song

kosi sikelel' iAfrika (*Xhosa*)
Maluphakanyisw' uphondo lwayo, (*Xhosa*)
Yizwa imithandazo yethu, (*Zulu*)
Nkosi sikelela, thina lusapho lwayo. (*Zulu*)
Morena boloka setjhaba sa heso,
O fedise dintwa le matshwenyeho,
O se boloke, O se boloke setjhaba sa
heso, Setjhaba sa, South Afrika.

(Entire verse is performed in Sesotho)

South Afrika!

Uit die blou van onse hemel,
Uit die diepte van ons see,
Oor ons ewige gebergtes,
Waar die kranse antwoord gee,

(Entire verse is performed in Afrikaans)

Sounds the call to come together,
And united we shall stand,
Let us live and strive for freedom,
In South Africa our land.

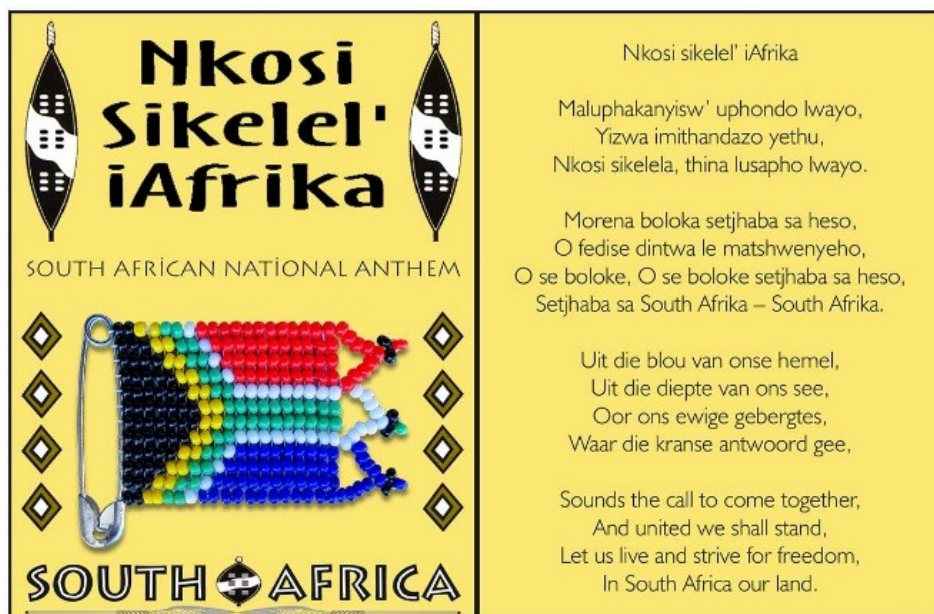

(Entire verse is performed in English)

Translated in English

God [Lord] bless Africa
May her glory be lifted high
Hear our petitions
God bless us, Your children
God we ask You to protect our nation
Intervene and end all conflicts
Protect us, protect our nation, our nation,
South Africa

South Africa!

Ring out from our blue heavens,
From our deep seas breaking round,
Over everlasting mountains,
Where the echoing crags resound,

Coat of arms:

The motto of the Coat of Arms is in the Khoisan language of the /Xam people, and means “diverse people unite”, or “people who are different joining together”. This call is for each of us to create a sense of belonging with all South Africans and a sense of pride in our nation. In addition, we should respect and uphold the differences of cultures from all over Africa and the world. We celebrate those things that make us South African - our national symbols, our sport teams and heroes, our environment, our leaders and each other – and respect those things that make us unique.

**National days**

National days are a way of nation building. Nation building takes place when everyone works together to create a feeling of belonging to a nation and to build a better country.

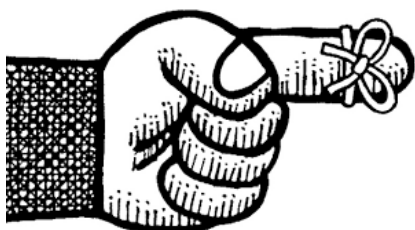

The table below shows some of the national days celebrated in South Africa.

National days	Date	What is celebrated?
Human rights day	21 March	Human Rights Day (21 March) was officially declared a public holiday in 1994 following the inauguration of former president Nelson Mandela. This national day-off is both a stark reminder of the tragic Sharpeville massacre and a celebration of South Africa's unique constitution, which gives equal rights to all.
Freedom Day	27 April	Freedom Day celebrates the first democratic elections held in South Africa on 27 April 1994
Workers Day	1 May	Workers' Day celebrates the role played by trade unions, the Communist Party and other labour movements in the struggle against apartheid.
Youth Day	16 June	June 16th is a public holiday in South Africa commemorating the start of the Soweto Riots of 1976, sparked off by a government edict that all instruction in black schools would be delivered in Afrikaans. Youth Day could be a conflict-ridden date, but instead it serves to remind South Africa of the importance of its youth and brings across the

		message that something like “the Soweto riots” should never happen again.
Heritage Day	24 September	The public holiday was declared in 1996. It is a day to celebrate our diverse cultural heritage and our unity as a nation.
Reconciliation Day	16 December	During the apartheid era 16 December was known as the Day of the Vow as the Voortrekkers had made a vow to God before the battle of Blood River against the Zulus in 1838. The Voortrekkers said that they would build a church and that their descendants would use the day as a day of thanksgiving should they be granted victory. On 16 December 1961, Umkhonto we Zizwe (MK), the military wing of the ANC was formed. On 16 December 1995, the Day of Reconciliation was celebrated as public holiday in South Africa for the first time.
Nelson Mandela Day	18 July	This day honours Nelson Mandela and is celebrated on his birthday. The day was officially declared by the United Nations in November 2009. The Nelson Mandela Day campaign message is: “Nelson Mandela fought for social justice for 67 years. We’re asking you to start with 67 minutes.” On this day, people are encouraged to work towards social development by doing something to uplift their communities.
Woman’s Day	9 August	Every year on 9 August we celebrate Women’s Day in South Africa, a public holiday that pays homage to the women of our nation; - the mothers, the wives, the sisters and the daughters who fought tirelessly against the tyranny of the Apartheid government.

Activity 4: Design and make a poster

Design and make a poster of any one of the national days listed above. You and a friend need to work together to complete the poster. Your teacher will provide you with paper to do your poster on. Remember to include the following on your poster:

- Date of the national day
- The national day’s name
- Why is it considered a national day?
- When was it declared a national day?
- Pictures

Submission date: _____

Your teacher will use the following rubric to assess you:

Criteria	Marks
Poster is about one of the national days listed	/2
All necessary information is given as mentioned above.	/5
Relevant pictures were used.	/2
Is the poster neat?	/2
Poster was done in a group	/2
Handed in on time	/2
Total	/15

Unit 4: World of work

History of money

Money, in some form, has been part of human history for at least the last 3,000 years. Before that time, it is assumed that a system of bartering was likely used. Barter is a system of exchange where goods or services are directly exchanged for other goods or services without using a medium of exchange, such as money.

Forms of money:

9000 - 6000 B.C.: Cattle

Cattle, which throughout history and across the globe have included not only cows but also sheep, camels, and other livestock, are the first and oldest form of money.

1200 B.C. Cowrie shells

The first use of cowries, the shells of a mollusc that was widely available in the shallow waters of the Pacific and Indian Oceans, was in China. Historically, many societies have used cowries as money, and even as recently as the middle of this century, 1cowries have been used in some parts of Africa. The cowrie is the most widely and longest used currency in history.

1000 B.C: First metal money and coins

Bronze and Copper cowrie imitations were manufactured by China at the end of the Stone Age and could be considered some of the earliest forms of metal coins. Metal tool money, such as knife and spade monies, was also first used in China. These early metal monies developed into primitive versions of round coins. Chinese coins were made out of base metals, often containing holes so they could be put together like a chain.

118 B.C.: Leather money

Leather money was used in China in the form of one-foot-square pieces of white deerskin with colourful borders. This could be considered the first documented type of banknote.

806: Paper currency

The first known paper banknotes appeared in China. In all, China experienced over 500 years of early paper money, spanning from the ninth through the fifteenth century. Over this period, paper notes grew in production to the point that their value rapidly depreciated and inflation soared. Then beginning in 1455, the use of paper money in China disappeared for several hundred years. This was still many years before paper currency would reappear in Europe, and three centuries before it was considered common.

The present:

Today, currency continues to change and develop. Paper as well as coins are used in everyday activities like buying a bread. Debit and credit cards are used to buy products and pay for services. Card transactions is immediate and does not require physical cash to be present.

The future: electronic money

In our digital age, economic transactions regularly take place electronically, without the exchange of any physical currency. Digital cash in the form of bits and bytes will most likely continue to be the currency of the future. Examples of this is internet banking as well as banking on a phone app.

Role of money in everyday living.

Money forms a big deal in everyday living. Without money you won't be able to afford basic things like food or clothes. Things that are necessary for survival. Having a lot of money gives you financial freedom thus letting you choose where you stay and how you live. We typically spend our money on food, clothes, our home, ourselves as well as our loved ones. Working hard and finding a job helps you to get financial freedom.

Activity 4: History of money

1. What is bartering? (3)

2. Fill in the missing words. (5)

Leather _____ was used in _____ in the form of one-foot-square pieces of white _____ with colorful _____. This could be considered the first _____ type of _____.

3. What do **you** spend your money on? Name at least two things. (2)

a. _____

b. _____

4. What forms of currency do we use today? Name 4 (4)

a. _____

b. _____

c. _____

d. _____

5. Why do we need money for everyday living? (1)

Total: 15

TERM 2

DEVELOPMENT OF SELF: ABILITIES, INTEREST AND POTENTIAL.

Self-image is the idea you have about yourself. This includes your appearance and your personality. Your personal abilities, interests and potential add to the picture you create about yourself.

Having a positive self-image gives you the confidence to meet other people, enjoy different experiences and develop new skills and talents. In this way you can fulfil your potential.

But before you can fully reach your potential you first have to figure out what your abilities and interests are.

Differences between abilities, interest and potential

Abilities:

Ability is the possession of the means or skill to do something. In other words it's the talent or skill to do something good in a particular area. For example, all the learners in grade 7 in Roodepark School have the ability to read and write.

Interest:

Interest is the feeling of wanting to know or learn about something or someone. In other words, it's a feeling of something that you really want to know and learn more about. For example, if you have a passion for sport, you will try and find out as much as possible about that particular sport. You then show an interest in the sport and thus learn more about the sport to become good in it.

Potential:

Potential is the possibility of something happening or of someone doing something in the future. It is qualities and abilities that may be developed and lead to success. In other words, it is the possibility of something.

Relationship between abilities, interests and potential.

The idea you have about yourself can help you to achieve your full potential. But in order for you to achieve your potential, you need to have a good idea about what you

are capable of doing. Your potential refers to all the possible things that you can achieve. This is based on personal interests, abilities, opportunities, strengths and effort. A positive self-image is important if you want to be successful in life.

Now that we know what the difference between abilities, interests and potential are, look at Activity 1.

Activity 1: My own abilities, interests and potential

1. Give a clear definition of the term abilities. (2)

2. What is the difference between interests and potential? (3)

3. Look at the table below and write down your own abilities, interests and potential. (6)

<u>Abilities</u>	<u>Interests</u>	<u>Potential</u>

4. Cut pictures from magazines and newspapers that represent your interests.

You may paste these pictures in the table below.

(4)

--

Total: ____/15

HEALTH, SOCIAL AND ENVIRONMENTAL RESPONSIBILITIES: Basic first aid in different situations.

First aid:

First aid refers to any help given to a sick or injured person until full medical treatment is available. First aid can and does save lives.

Basic first aid: safety.

Remember fools rush in where wise men fear to treat. When something happens and you need to apply first aid, you first have to make sure that **you** are safe. Safety remains a priority wherever we go to find or help a person.

Identify and differentiate between injuries.

Cuts and grazes:

Cuts and grazes are common injuries that can usually be treated at home. A cut is when the skin is fully broken, and a graze is when only the top layers of skin are scraped off.

Usually, all you need to do is clean the cut or graze to reduce infection and apply pressure and raise the injury to stop the bleeding. The wound should heal by itself in a few days.

Open cut wound

Graze wound

Burns, scalds and sunburn

Burns and scalds are damage to the skin caused by heat. Both are treated in the same way.

A burn is caused by dry heat - by an iron or fire for example. A scald is caused by something wet, such as hot water or steam.

Burns can be very painful and can cause:

- red or peeling skin
- blisters
- swelling
- white or charred

The amount of pain you feel isn't always related to how serious the burn is. Even a very serious burn may be relatively painless.

Treating burns and scalds

To treat a burn, follow the first aid advice below:

- **Immediately get the person away from the heat source** to stop the burning.
- **Cool the burn** with cool or lukewarm water for 20 minutes - do not use ice, iced water or any creams or greasy substances, such as butter.
- **Remove any clothing or jewellery** that is near the burnt area of skin, including babies' nappies - but do not move anything that is stuck to the skin.
- **Make sure the person keeps warm** – by using a blanket, for example, but take care not to rub it against the burnt area.
- **Cover the burn** by placing a layer of cling film over it - a clean plastic bag could also be used for burns on your hand.
- **Use painkillers**, such as paracetamol or ibuprofen, to treat any pain.
- **If the face or eyes are burnt, sit up as much as possible**, rather than lying down - this helps to reduce swelling.

Sunburn:

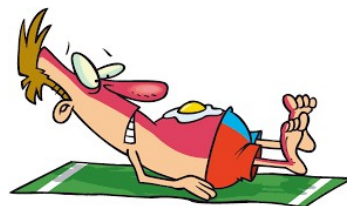

In cases of sunburn, follow the advice below:

- If you notice any signs of sunburn, such as hot, red and painful skin, move into the shade or preferably inside.
- Take a cool bath or shower to cool down the burnt area of skin.
- Apply after-sun lotion to the affected area to moisturise, cool and soothe it. Do not use greasy or oily products.
- If you have any pain, paracetamol or ibuprofen should help relieve it. Always read the manufacturer's instructions and do not give aspirin to children under 16 years of age.
- Stay hydrated by drinking plenty of water.
- Watch out for signs of heat exhaustion or heatstroke, where the temperature inside your body rises to 37–40°C or above. Symptoms include dizziness, a rapid pulse or vomiting.

If a person with heat exhaustion is taken quickly to a cool place, given water to drink and has their clothing loosened, they should start to feel better within half an hour. If they don't, they could develop heatstroke. This is a medical emergency and you'll need to call 911 for an ambulance.

Sunburn

First degree
burn

Second degree
burn

Third degree
burn

Stings and bites:

Most reactions to insect bites and stings are mild, causing little more than redness, itching, stinging or minor swelling. Rarely, insect bites and stings, such as from a bee, a wasp, a hornet, a fire ant or a scorpion, can result in severe reactions. Some insects also carry diseases.

For mild reactions

To take care of an insect bite or sting that causes a mild reaction:

- Move to a safe area to avoid more bites or stings.
- If needed, remove the stinger.
- Wash the area with soap and water.
- Apply a cool compress. Use a cloth dampened with cold water or filled with ice. This helps reduce pain and swelling. If the injury is on an arm or leg, elevate it.
- Apply a cream, gel or lotion to the injured area. Use products containing ingredients such as hydrocortisone, pramoxine or lidocaine to help control pain. Use creams such as calamine lotion or those containing colloidal oatmeal or baking soda to help soothe itchy skin.
- Use over-the-counter medications. Try a pain reliever, such as acetaminophen (Tylenol, others) or ibuprofen (Advil, Motrin IB, others), or an antihistamine (Benadryl, Chlor-Trimeton, others).

Usually, the signs and symptoms of a bite or sting disappear in a day or two. If you're concerned — even if your reaction is minor — call your doctor.

When to seek emergency care

Call 911 or your local emergency number if the injured person experiences:

- Difficulty breathing
- Swelling of the lips, eyelids or throat
- Dizziness, faintness or confusion
- Rapid heartbeat

- Hives
- Nausea, cramps or vomiting
- A scorpion sting and is a child

Take these actions immediately while waiting for medical help:

- Ask the person if he or she is carrying an epinephrine autoinjector (EpiPen, Auvi-Q, others) to treat an allergic attack.
- If the person says he or she needs to use an autoinjector, ask whether you should help inject the medication. This is usually done by pressing the autoinjector against the person's thigh and holding it in place for several seconds.
- Loosen tight clothing and cover the person with a blanket. Don't give him or her anything to drink.
- Turn the person on a side to prevent choking if he or she is vomiting or bleeding from the mouth.
- Begin CPR if the person shows no signs of circulation, such as breathing, coughing or movement

Bruises, poisoning, bleeding and choking.

Bruises:

A bruise forms when a blow, breaks blood vessels near your skin's surface, allowing a small amount of blood to leak into the tissues under your skin. The trapped blood may cause a bruise that at first looks like a black-and-blue mark and then changes color as it heals.

If your skin isn't broken, you don't need a bandage. But you can enhance bruise healing with these simple techniques:

- Elevate the injured area.
- Apply an ice pack wrapped in a towel or a cloth dampened with cold water. Do this for about 10 minutes. Repeat several times a day for a day or two after the injury as needed.
- Rest the bruised area, if possible.

Bleeding:

1. Stop Bleeding

- Apply direct pressure on the cut or wound with a clean cloth, tissue, or piece of gauze until bleeding stops.
- If blood soaks through the material, don't remove it. Put more cloth or gauze on top of it and continue to apply pressure.
- If the wound is on the arm or leg, raise limb above the heart, if possible, to help slow bleeding.
- Wash your hands again after giving first aid and before cleaning and dressing the wound.
- Do not apply a tourniquet unless the bleeding is severe and not stopped with direct pressure.

2. Clean Cut or Wound

- Gently clean with soap and warm water. Try to rinse soap out of wound to prevent irritation.
- Don't use hydrogen peroxide or iodine, which can damage tissue.

3. Protect the Wound

- Apply antibiotic cream to reduce risk of infection and cover with a sterile bandage.
- Change the bandage daily to keep the wound clean and dry.

Poison:

Poisoning is injury or death due to swallowing, inhaling, touching or injecting various drugs, chemicals, venoms or gases. Children are particularly sensitive to even small amounts of certain drugs and chemicals.

When to suspect poisoning

Poisoning signs and symptoms can mimic other conditions, such as seizure, alcohol intoxication, stroke and insulin reaction. Signs and symptoms of poisoning may include:

- Burns or redness around the mouth and lips
- Breath that smells like chemicals, such as gasoline or paint thinner
- Vomiting
- Difficulty breathing
- Drowsiness
- Confusion or other altered mental status

If you suspect poisoning, be alert for clues such as empty pill bottles or packages, scattered pills, and burns, stains and odors on the person or nearby objects. With a child, consider the possibility that he or she may have applied medicated patches or swallowed a button battery.

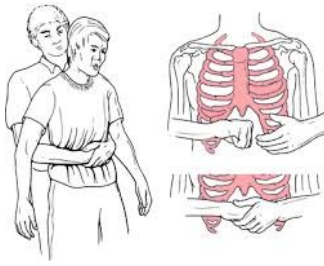

When to call for help

Call 911 or your local emergency number immediately if the person is:

- Drowsy or unconscious
- Having difficulty breathing or has stopped breathing
- Uncontrollably restless or agitated
- Having seizures
- Known to have taken medications, or any other substance, intentionally or accidentally overdosed

Be ready to describe the person's symptoms, age, weight, other medications he or she is taking, and any information you have about the poison. Try to determine the amount ingested and how long since the person was exposed to it. If possible, have on hand the pill bottle, medication package or other suspect container so you can refer to its label when speaking with the poison control center.

Choking:

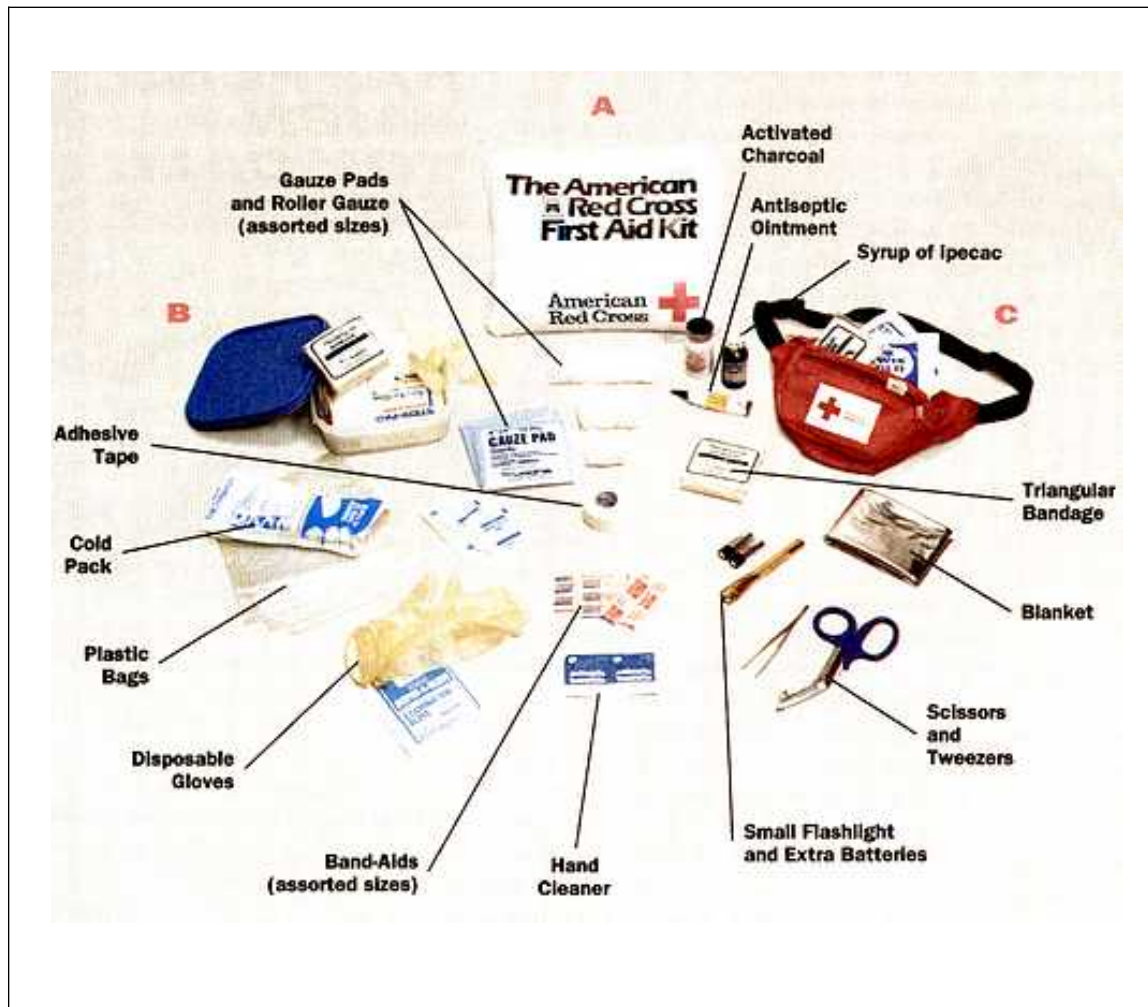

When someone is choking and suddenly cannot breathe, talk or make a sound, give thrusts gently above the belly button. These thrusts are known as the Heimlich Maneuver. Each thrust, pushes air above the lungs like a cough. This can help remove the object blocking the air way.

Use the following table to know whether a victim is choking.

If the victim	Block in the airway	And you should
Can make sounds. Can cough loudly.	Partial obstruction.	Stand by and let the victim cough. If you are worried about the victims breathing phone an ambulance on 082 911
Cannot breathe. Has a cough that is very quiet or has no sound. Cannot talk. Cannot cry. Has noisy breathing. Bluish lips or skin.	Complete obstruction.	Act quickly and follow the steps below.

<u>Step</u>	<u>Action</u>
1	If the victim is choking, ask, "are you choking?" If he nods yes, tell him you are going to help.
2	Stand behind the victim. Ask if he can bend forward from the waist, if he can, give 5 back slaps (between the shoulder blades) until the object comes out.
3	Kneel or stand firmly behind the choking victim. Wrap your arms around the victim so that your hands are in front.
4	Make a fist with one hand.
5	Put the thumb side of your fist slightly above the belly button and well below the breastbone.
6	Grasp the fist with your other hand and give a quick upwards thrust into his belly.
7	Give thrusts until the object is forced out and the victim can breathe, cough or talk again.

What does a medical kit look like?

Activity 2: Health, social and environmental responsibilities.

1. Give a clear definition of the term first aid. (3)

2. What first aid advice would you give to treat the following injuries? (15)

Injury	Advice
Bleeding. 	
Mild sting reaction. 	
Burns. 	

3. Fill in the missing words: (2)

Remember fools rush in where wise men fear to treat. When something happens and you need to apply first _____, you first have to make sure that _____ are safe.

Total: ____/20

WORLD OF WORK: Importance of reading and studying.

There is an important link between reading and studying. However, you do not only read to study but you also read for pleasure.

Memory is another core activity of studying and there are lots of things you can do to improve your memory and mental performance.

Importance of reading and studying.

It is obvious that former South African President Nelson Mandela understood the importance of reading and studying when he said, "Education is the most powerful weapon which you can use to change the world."

You read to enjoy yourself and also to understand things. You read when you receive an SMS from a friend, follow a recipe, want to find out more about your favorite topics, do a project, and study for a test and so on. Throughout your life you will probably read a wide range of material. The purpose of your reading will determine the type of reading you engage in.

Understand and have a knowledge of the basic reading and study skills.

Reading is one of the core activities of studying. A key way to gain information is through reading. When studying, you may read the same work more than once, each time with a different purpose. You must know before you begin reading what your purpose is, and read for that reason. Ultimately you need to be able to understand what you read and be able to recall the main ideas when you need them.

Here are some tips to remember when reading and studying:

- Read over your work to get an overview of the module or specific topic.
- Find the main ideas and understand them in your own way.
- Extract important details.
- While you are reading, show understanding and ask questions if you don't understand something.
- Active reading needs concentration, so take your time and find a quiet place where you can read and focus.
- Read material with understanding again. On the second reading, being to take notes and make summaries.
- Practice your reading. When you read, focus on reading faster and remembering more.

Apply skills to develop memory: ability to recall

Memory is the ability of the mind to hold on to learnt information and knowledge of past events and experiences and to recall or remember that information and knowledge.

Tips for developing memory:

1. Pay attention
2. Involve as many senses as possible
3. Connect information to what you already know
4. Focus on understanding basic ideas rather than memorizing small details
5. Repeat information you have already learnt
6. Eat the right foods

Activity 3: Using a dictionary.

Paste in and read any newspaper article of your choice and identify 10 words that you don't know the meaning of. Write down these 10 words in the block below and use a dictionary to find the meaning of each word. Write the meaning next to each word.

(10)

WORLD OF WORK: Needs and wants

All people experience life differently. Each person has needs and wants. These needs and wants are continually changing and developing from situation to situation and from time to time. Despite these changes and differences, all people have the same basic needs.

Basic Needs.

You need these things to stay alive. They are the basic things you need to survive, so they are called your individual survival or basic needs.

Basic needs of individuals:

Each person in the world needs:

- Air to breathe
- Water to drink and wash with
- Food to eat
- Shelter
- Fuel to keep them warm
- Clothes to keep their bodies warm.

Basic needs of families

As an individual you belong to groups of different sizes, such as your family, community and country. Families have the same basic needs as individuals.

Basic needs of families include:

- Water
- Food
- A house to be protected against the elements
- Electricity or fuel to help keep the house warm, to cook food or to provide light at night.

Every family is different, and because of that every family's basic needs will differ.

Wants

Wants are things we would like to have but can live without. For example, we need food but we want KFC. We need clothes but we want to wear fashionable designer labels.

List 5 things that you want but do not need.

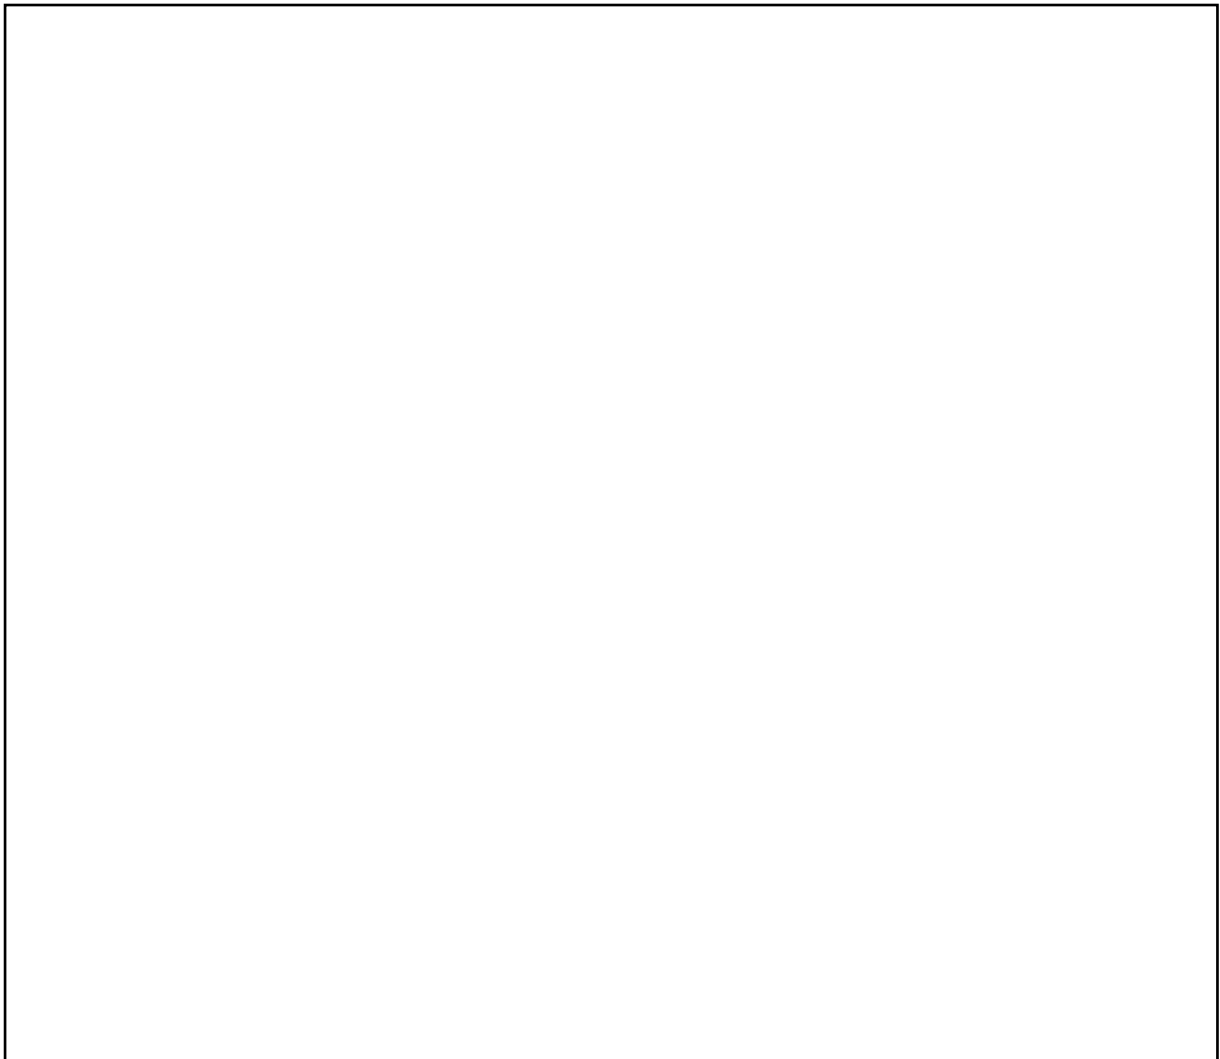

Activity 4: Needs and Wants

1. Explain in your own words the difference between needs and wants. (5)

2. List 5 basic needs that your family needs in the one column and list 5 wants that you want in the other. (5)

<u>YOUR FAMILY'S BASIC NEEDS</u>	<u>YOUR PERSONAL WANTS</u>

3. Paste 5 pictures of things that you as an individual need. Please remember to label each picture and say what it is used for. For example, clothes to keep warm.

Rubric for question 3:

Criteria	Marks allocated
5 pictures pasted	/5
Description of each picture	/5

Total: ____/20

Term 3

Development of self - Peer pressure

Peer pressure occurs when people the same age as you pressurize you into doing something you would not normally do. It also happens when you are influenced to do something that goes against your beliefs. You can safeguard yourself against bad peer pressure by learning to be assertive and practicing negotiation skills.

Effects of peer pressure

Many people may feel the pressure to fit in at some stage of their lives. This pressure can be stronger on teenagers because they are developing independence from their parents and are still busy forming their own opinions about what is right and wrong.

Your peers are the people who are the same age as you. You spend time with them and they may have their own way of behaving. What they do and what they think about you has an influence on your self-image.

How peer pressure may influence an individual

Some teenagers do things that they know are wrong when they allow peer pressure to influence them. Their need to be accepted or their fear of being laughed at causes them to go along with the group. Often they would not behave in this way if they were alone or with another group of people.

Peer pressure can be obvious or subtle. Examples of this include:

Obvious:

- Offered drugs and expected to take them
- Given a cigarette and mocked if you refuse to smoke.
- Expected to join to bully someone
- Steal something to prove your loyalty
- Stop working at school
- Rebel against teachers and parents
- Break rules of laws

Subtle:

- Copy peers' hairstyles
- Start believing what they believe
- Think you should like the music they listen to
- Adopt peers' attitude to certain matters such as sex
- Talk in the same way as your peers

Use of substances

Many teenagers start drinking when they are persuaded or forced by their peers. The pressure on them increases when alcohol is freely available at parties. Some start drinking to be accepted by their peers. Others start smoking to show that they are part of the popular crowd.

People who use drugs tend to spend time with others who share their habit. They think that using substances is acceptable and they may look down on people who do not use them.

The problem with drugs and alcohol is that they affect your ability to make decisions. They can also affect your health, cause accidents and lead to fights and crime.

People who drink and take drugs do things that they regret when they are sober. Because teenagers are at a vulnerable age, they do not understand the effects their actions will have on them later in life.

Crime

Teenagers are influenced to commit crimes for various reasons:

- They are challenged by their peers.
- They want approval from their peers.
- They do not want to be seen to let their peers down.
- They are afraid of being left out of the group.
- They must show their worth as members of the group.

The crimes committed may vary from shoplifting to attacking someone or stealing a car. Many teenagers do not have the maturity to understand the consequences of their actions.

Unhealthy sexual behavior

Studies have shown that teenagers who became sexually active often did so because they thought it would impress their peers. Some were found to be having unprotected sex with more than one partner because they thought that “everyone was doing it”. Unhealthy sexual behavior can result in unwanted pregnancy, feeling emotionally hurt or using and sexually transmitted infections like AIDS.

Bullying

Bullying refers to behavior where a person or group of people repeatedly threaten or try to harm someone they see as weaker. It is intended to hurt and may involve direct attacks such as hitting, name-calling or teasing. Sometimes it is indirect, for example spreading nasty rumors or turning people against someone.

Cyber bullying occurs when people post nasty comments on the web pages of others. Often, the cause of bullying can be traced to a bully with a low self- with a low self-image.

Some teenagers accept the behavior of bullies or even join in acts of bullying because they are scared of being bullied themselves. Others do it to avoid being left out of the group.

In a sense, peer pressure is a form of bullying when individuals are forced to join a group through intimidation.

Rebellious behavior

Many teenagers generally spend more time with their peers than with their families. They naturally begin to adopt the views and behavior of their peers, often without even realizing it.

For some teenagers, rebellious behavior develops from the need to fit in with peer groups.

Some forms of rebellious behavior include:

- Disobeying rules
- Spending more time away from the family
- Using substances such as alcohol and drugs
- Changing one's appearance
- Missing school
- Not doing school work
- Being argumentative
- Running away from home

Activity 1.1: Peer Pressure

1. Use the word bank and fill in the missing words:

pressure	pressurize	influenced	beliefs
	negotiation		

Peer _____ occurs when people the same age as you _____ you into doing something you would not normally do. It also happens when you are _____ to do something that goes against your _____. You can safeguard yourself against bad peer pressure by learning to be assertive and practicing _____ skills.

2. Name two (2) examples of **obvious** peer pressure.

2.1. _____

2.2. _____

3. Name two (2) examples of subtle peer pressure.

3.1. _____

3.2. _____

4. Underline the correct answer:

4.1. Many teenagers start drinking when they are persuaded or forced by

4.1.1. Their parents

4.1.2. Their peers

4.1.3. Their siblings

4.2. People who use drugs tend to spend time:

4.2.1. Alone

4.2.2. With others that share their habits

4.2.3. With others that likes eating candy

4.3. Drugs and alcohol affects your ability to:

4.3.1. Eat chocolate

4.3.2. Make decisions

4.3.3. Clean the house

4.4. Drugs and alcohol can also affect your:

4.4.1. Lunch

4.4.2. Homework

4.4.3. Health

4.5. True or false:

4.5.1. Teenagers are influenced to commit crimes because they must show their worth as members of the group. _____

5. Name two (2) possible consequences of unhealthy sexual behavior.

5.1.1. _____

5.1.2. _____

6. Give a clear definition of the term 'bullying'.

7. Name one (1) thing you can do if you are being bullied.

8. Fill in the missing words:

8.1.1. Many teenagers spend more time with their _____
than with their _____.

9. Use color pencils and color in the correct answers:

Forms of rebellious behavior include:

- Disobeying rules

• Being sweet and innocent
• Running away from home
• Doing your homework

Constitutional rights and responsibilities

Children's rights and responsibilities.

All humans have basic human rights, regardless of their race, gender or religious beliefs. These are “natural rights” and people have these rights just because they are human beings. With these rights comes responsibilities. We should always respect and tolerate others' rights.

In 1948, the Universal Declaration of Human Rights was drawn up, with the aim of securing certain basic rights for all people.

These rights are endorsed by almost every government in existence. The laws act as guidelines for governments of different countries when drawing up their constitutions.

Our Constitution has a Bill of Rights, which is a list of the rights that every South African is entitled to by law. The success of the Bill of Rights depends mostly on the attitudes on individuals and the respect and tolerance that they show towards other people. We all have responsibilities to make our Constitution work.

Human rights are sometimes called “natural rights”. People have these rights just because they are human beings. People are entitled to these rights no matter where they live in the world, or what position they hold in society. It does not matter what a person's age, race, sex, class, language, belief, culture or religion is or how much money or education a person has, everyone has the same human rights.

Application of human rights.

“The Bill of Rights is a cornerstone of democracy in South Africa. It enshrines the rights of all people in our country and affirms the democratic values of human dignity, equality and freedom.” (From Section 7 of the South African Bill of Rights)

Everyone is entitled to basic human rights. The responsibilities of the government to make sure that human dignity, equality and freedom are available to all people.

People should be educated about their human rights so that no one is disadvantaged.

Application of responsibilities in relation to human rights.

Everyone has a responsibility to respect and be tolerant of other people's rights. Tolerant means accepting and living with the differences in attitude, action, culture, religion or sexual orientation in other people. Tolerant people accept that other people have different opinions to their own and allow them to express these opinions freely.

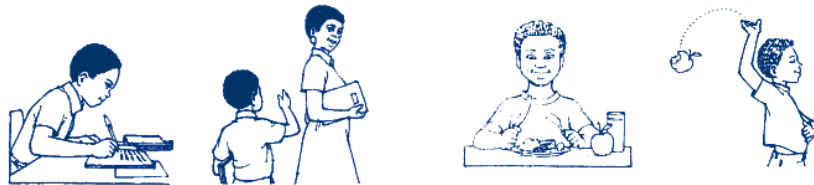

A tolerant person will:

- Show respect towards other people
- Use negotiation and mediation to solve problems between people
- Be patient with other people
- Be a good listener
- Not get angry easily.

Children's Rights

- Children have the right to be taken seriously ... and the responsibility to listen to others
- Children have the right to quality medical care ... and the responsibility to take care of themselves
- Children have the right to a good education ... and the responsibility to study and respect their teachers
- Children have the right to be loved and protected from harm ... and the responsibility to show love and caring to others
- Children have the right to special care for special needs ... and the responsibility to be the best people they can be
- Children have the right to be proud of their heritage and beliefs ... and the responsibility to respect the origins and beliefs of others

- Children have the right to a safe and comfortable home ... and the responsibility to share in keeping it neat and clean
- Children have the right to make mistakes ... and the responsibility to learn from those mistakes
- Children have the right to be adequately fed ... and the responsibility not to waste food

Activity 2.1: Children's rights and responsibilities.

1. Look at the following pictures and write down the correct children's right and responsibility next to the picture.

2. In what year was the Universal Declaration of Human Rights drawn up

_____.

3. Name the five characteristics a tolerant person will have:

3.1. _____

3.2. _____

3.3. _____

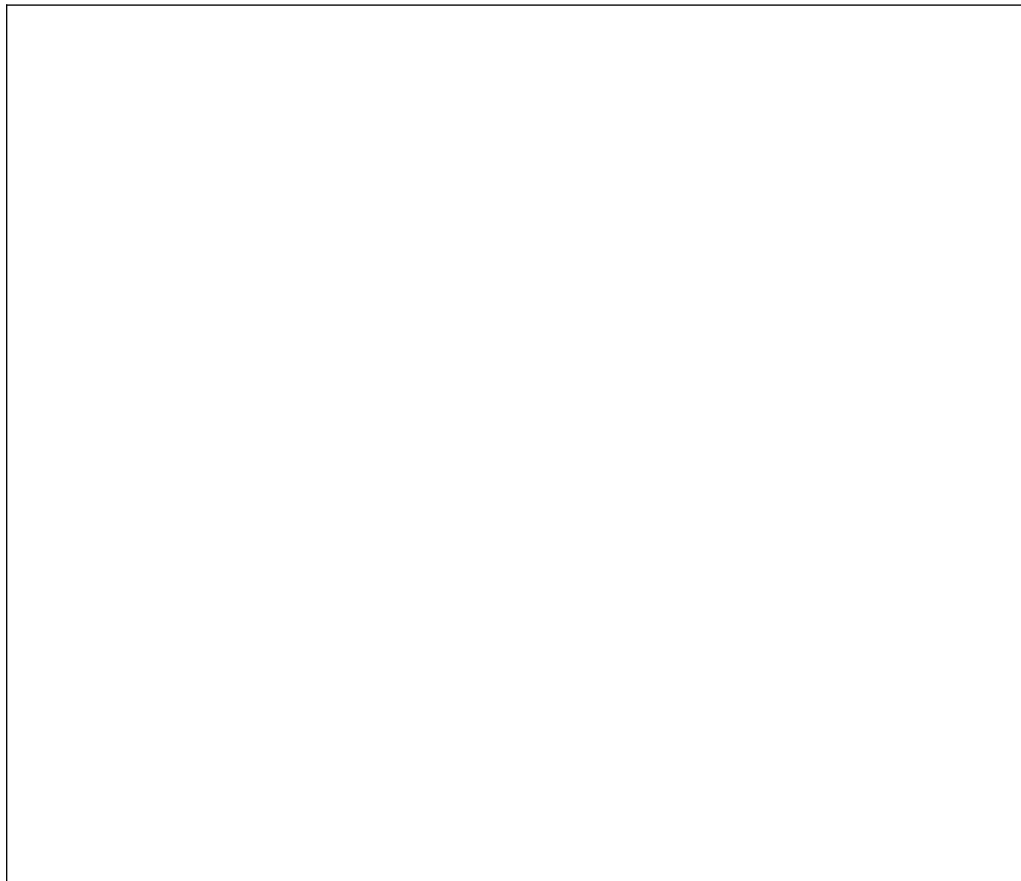

3.4. _____

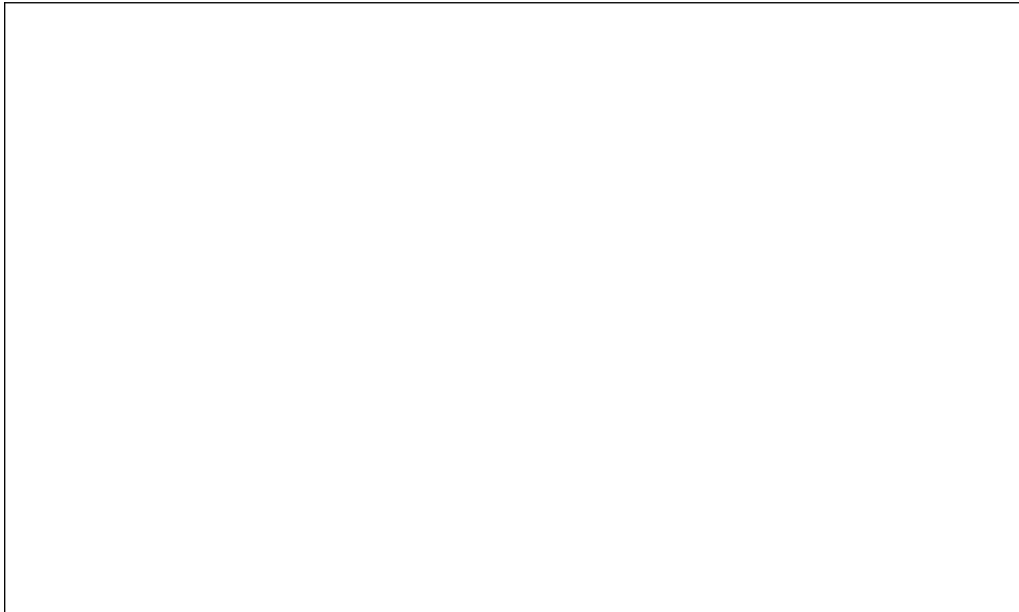

3.5. _____

4. Complete the following sentence:

All humans have basic human rights, regardless of their _____,
_____ or _____ beliefs.

5. Use your imagination and draw your own picture for a child's right and responsibility not mentioned in question 1. Remember to write the right and responsibility down.

World of work

Career field

There are many exciting career fields in the world of work. This unit tells you about the opportunities and challenges they hold for you and how you can access information about career opportunities.

It is important to explore as many opportunities as possible to determine which career would suit you. This does not only involve investigating different career fields, but also the interests, abilities, work environment and activities associated with these careers.

You need to have a good idea of who you are and what you want out of life before deciding which career path to follow.

Building on your strengths is a good place to start. Your personality, interests, abilities and values will determine the type of work that will suit you.

Your personality is made up of your **physical**, **mental**, **emotional** and **social** characteristics.

Your likes, dislikes, strengths, weaknesses, the way you dress and the way you express yourself make up your personality.

Your values are those things that are the most important in your life and include your family life, security, money, leadership, healthy living and many more.

Career fields

A good starting point is to look at the different types of careers that are available. Careers are grouped into career fields according to the type of work and abilities required to do that work.

Below is a list of different career fields:

- Applied and visual art
- Catering and hospitality
- Crafts
- Performing arts
- Sport
- Trades
- Cleaning

Qualities relating to each field

Careers are grouped into career field based on similar qualities. You should try to match the qualities of specific career to your personal interests and abilities.

Interests

Your interests are the things that you find fascinating and that grab your attention. You could describe your interests as the activities that you really enjoy and want to know more about.

Abilities

Abilities are the things that you are good at; your talents. The marks you get for school subjects will give you a good indication of your abilities.

When choosing a career field, you need to think about your abilities. For example, if you are shy and prefer working out problems on your own, you probably would not choose a career field where you have to stand up and talk in front of large groups of people. Rather choose a job where you can work on your own, for example in a wood work center.

School subjects related to each career field

Certain school subjects are required for certain career fields. Think carefully about what you want to be when you grow up, as your choice of center will influence your career options.

Career field	School subjects
Applied and visual arts, performing arts	Creative Arts, Life Orientation
Building and Construction	Mathematics, EMS, Life Orientation, Building Center
Catering and hospitality	Hospitality, Life Orientation, EMS
Sport	Life Orientation, Sport at school
Trades	Life Orientation, any center that helps you with your career: woodwork, welding, ect.

Activity 3.1: Collage

Do some research on the career that you want to pursue one day. Make a collage with the information that you gathered. Your teacher will provide you with a color page to do your collage on. Make sure to be creative. You will be assessed with the

Assessment Rubric: Collage	
Submission date:	
Did the learner use more than 4 pictures?	/4
Was the career researched?	/2
Is the collage neat and organized?	/2
Completed collage in time.	/2
Total:	/10

Income and expenditure

Income is the money that is coming in, and your personal income is your own money that you have earned or been given.

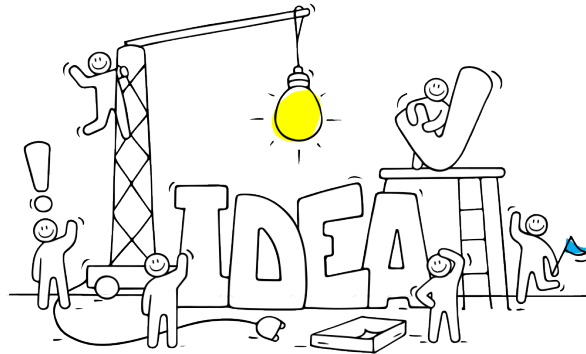

Personal expenses (expenditures) are the things which you spend money, such as school fees, food and rent.

There are different ways of getting personal income:

- People who work can either be paid a salary or wages. I

- If you are lucky and win the Lotto, you get money as a gift.
- Another way to earn personal income is by doing odd jobs or chores for your family and people in your community.

If you are paid a salary, your income is paid at the end of every month. If you earn wages, you are paid weekly or daily for your work.

Personal income

Your personal income could be the pocket money your parents give you or what you earned for some service rendered. Many learners earn personal income by working part-time. There are two types of personal income:

1. **Fixed income** includes amounts that are received regularly, such as a salary or wages.
2. **Variable income** will be uncertain windfalls, such as winning a competition or receiving money as a gift.

When calculating total personal income, we only include reliable fixed income.

Activity 4.1: Income and expenditure

1. Calculate personal income: Read the case study below and calculate Sarah's income for the month. (A month has four weeks.) (5)

Sarah has a full-time job as a nanny. Her wages are R750 per week plus R20 per hour overtime. She works one hour overtime every Monday, Tuesday and Thursday. On the weekends she works as a part time baker at the local bakery shop. She earns R650 per weekend. In her spare time she also bakes fudge and sell it to her neighbors and friends. Her fudge brings in R400 every month.

2. List 5 items that you like to spend your money on. (5)

2.1.1. _____

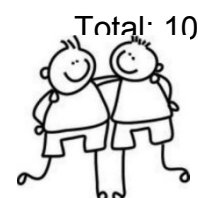

2.1.2. _____

2.1.3. _____

2.1.4. _____

2.1.5. _____

Term 4

Respect, appreciation and acceptance

To respect someone is admire them for their qualities or achievements. It also refers to caring about the way other people feel and their rights. To appreciate something means to understand value and worth.

Respect for own and others' body changes and emotions

Your self-image is affected by the way you feel about yourself during puberty. You might compare yourself to your friends or an image of what you want to look like. If you feel like you don't compare favourably you might feel inadequate. Feeling like you are not good enough is normal. Respect your feelings about the way your body is changing. That is part of the process of growing up.

You are expected to behave more responsibly towards yourself and towards others because you are becoming an adult. You are also expected to understand that you are responsible for your actions and decisions. You should respect the bodies of others as well as your own. Even though you might want to compare yours body to others, you need to respect that your and their bodies are changing at different rates. You might have sexual feelings towards someone but you need to learn to control any impulses.

You might be tempted to experiment with smoking, drinking alcohol and having sex. These activities create physical and emotional problems and carry serious consequences.

Appreciation and acceptance of the self and others

Puberty is a life changing stage of development. Many cultures show their appreciation by celebrating this stage. In various African cultures, boys are taken into the mountains for their initiation into manhood.

Everyone goes through puberty. Talk to others. Ask someone older for advice. Speak to a friend who will understand how you feel. Share your experiences. In this way you learn to accept yourself and to appreciate others.

Activity 1: Respect, appreciation and acceptance

1. Give a clear definition of the word respect. (2)

2. What does the word appreciation mean? (3)

3. Fill in the missing words: (5)

You might _____ yourself to your _____ or an _____ of what you want to look like. If you feel like you don't compare _____ you might feel _____.

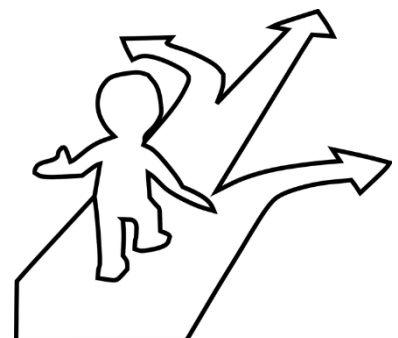

4. Underline the correct answer: (5)

4.1. Puberty is a _____ stage of development.

- a. Life changing
- b. Life enhancing
- c. Long term

4.2. _____ goes through puberty.

- a. Everyone
- b. Your parents

- c. Just you

4.3. Share your _____.

- a. Experiences
- b. Ideas
- c. Your food

4.4. Many cultures show their appreciation by _____ this stage.

- a. Celebrating
- b. Protect
- c. Ignore

Total: 15

Unit 2: Common diseases and the cause of diseases.

A disease is an abnormality of the body or mind that most commonly cause pain and discomfort, but can also cause the body to not function properly, leading to distress and even death.

Many diseases are caused by germs that invade the human body; however, there are a number of other factors that also contribute to causing diseases.

Causes of disease

Social factors

There are a number of social factors that have an impact on one's health:

- **Poverty:** Poor people often have less access to healthy food and good medical care therefore they are often more at risk of getting ill.
- **Social exclusion:** Social exclusion refers to situations where people are denied certain rights, opportunities and resources such as housing, employment and healthcare.
- **Poor housing:** When people do not have proper shelter and facilities, they are exposed to bad weather and germs that can cause disease.

- **Poor health systems:** In countries where there is a lack of proper medical care, people do not get the medical care they need.

Environmental factors

This include things such as the air we breathe, the water we drink and the food we eat. Air, water and soil pollution are the main environmental factor responsible for poor health.

Economic factors

Unfortunately, heath services and medicine are very expensive, as is maintaining a healthy lifestyle. This means that poor people in poor countries are more at risk of bad health.

Lifestyle

There are many things in the way we live our lives that cause poor health, for example:

- **Diet**
- **Stress**
- **Smoking**
- **Alcohol**
- **Lack of exercise**
- **Sun Exposure**

Common diseases

There are many different diseases that make people unhealthy and can even lead to death. Some of these diseases are rare, while others are more common. Below are some common diseases.

Tuberculosis

Tuberculosis (TB) is an infectious disease caused by bacteria. TB most commonly affects the lungs, but can also affect the other organs in the body. If a person with TB coughs or sneezes the bacteria move into the air and can affect other people.

Diabetes

A person with diabetes has a condition in which sugar is not used effectively to provide the body with the energy that it needs for living and growing. A diabetic person's body is unable to supply enough insulin, or the insulin does not work properly. Insulin helps transport sugar from the bloodstream to the body cells. Diabetes is not contagious.

Signs of diabetes may include:

- Constant thirst
- Always feeling tired
- Frequent urination
- Unexplained weight loss
- Itchy skin
- Blurry vision
- Slow healing cuts and bruises
- Numbness in hands and feet

© Can Stock Photo

Epilepsy

Epilepsy is a brain disorder in which the message in the brain and the nerves do not work properly. The normal pattern of brain and nerve activity becomes disturbed, referred to as a seizure. Seizures can cause strange feelings and behaviour, or

sometimes cause the person to experience muscle spasms and even pass out. Epilepsy is not contagious.

Tips or epilepsy.

If you are with someone who has a seizure, remember the following.

DO...

- Protect the person from injury – remove harmful objects from nearby.
- Cushion the person's head.
- Look for an epilepsy identity card or identity jewelry.
- Aid breathing by gently placing the person on his or her side once the seizure has ended.
- Stay with the person until recovery is complete.
- Be calmly reassuring.

DO NOT:

- Restrain the person's movements.
- Put anything in the person's mouth.
- Try to move the person unless he or she is in danger.
- Give the person anything to eat or drink until he or she is in danger.
- Attempt to bring the person round.

Obesity

Obesity is a condition where a person is carrying too much body fat. The best way of finding out if a person is obese is by using the body mass index (BMI). This is a calculation using a person's height and weight.

Obesity can lead to diabetes, high blood pressure, heart disease and other serious illnesses.

Anorexia

Anorexia is an eating disorder. An anorexic person eats very little or often over-exercises or uses diet pills to the point where the body is suffering from starvation. This can happen when a person is unhappy with the way his or her body looks, but more often it is because the person feels a strong sense of control over his or her body. The person becomes obsessed with losing weight and it even becomes like an addiction for the person.

HIV and AIDS

HIV is a virus that infects the human body. This virus weakens the body's immune system, making it too weak to fight any diseases which attacks the body. HIV usually is spread from person to person through contact with infected body fluid or infected blood.

When an HIV-positive person's immune system is too weak to fight against disease and he or she begins to get very sick, we say the person has AIDS.

Treatments of disease

Some diseases can be helped with medicine. Some diseases are helped by surgery. However, not every disease can be helped with medicine or surgery. Some diseases must be treated throughout a person's life they are chronic diseases. An example is diabetes. People who usually treat diseases are called doctors or physicians.

Activity 2: Understanding common diseases and their causes.

1. Which of the diseases mentioned in this unit are infectious?
 1. _____
 2. _____
2. Mention three other infectious diseases not mentioned in this unit.
 1. _____
 2. _____
 3. _____

3. What is social exclusion and how does it affect people's health?

4. Explain why poor people are more at risk of disease than wealthy people.

5. Write your own list of five "Healthy Lifestyle Rules".

1.

2.

3.

4.

5.

6. Fill in the missing words:

People who usually treat _____ are called
_____ or physicians.

7. Signs of diabetes may include the following: (colour the correct answers)

Never thirsty
Always tired
Unexpected weight loss
Outstanding eye sight

Treatment options, care, support and resources on health information and health services.

There are various treatment options and places to receive care and support if you or someone you love is suffering from a disease. You can get more information at health services, such as your local clinic, hospital and doctor's room or from a travelling doctor or nurse.

Tuberculosis

TB can generally be cured with antibiotics and other medication. The medication must be taken as the healthcare worker instructs and the course of antibiotics must be completed. If you suspect that you have TB, visit your local clinic or your doctor immediately.

Diabetes

Depending on the type of diabetes and how serious it is, it is either treated with insulin injections, or managed with physical activity and meal planning. Diabetes South Africa supports people with diabetes and provides information on the disease.

Epilepsy

The normal treatment for epileptic seizures is the regular use of one or more chemical substances called anti-convulsant or anti-epileptic drugs. Epilepsy South Africa is an organisation that supports and educates people with epilepsy.

Obesity

The treatment for obesity involves reducing the number of kilojoules you eat and increasing the amount of exercise you do. Weightwatchers is a national organisation that helps people to adopt healthy eating habits and exercise more regularly.

Anorexia

There are aspects to treatment of anorexia. Psychiatric treatment involves the prescription and monitoring of anti-depressant medication. Psychological treatment involves counselling and assistance with managing behaviour and beliefs. Nutritional treatment involves advice on food and nutritional intake during the recovery process. You can contact the South African Depression and Anxiety Group (SADAG) for help or visit the Recovery Space website for eating disorder information.

HIV and AIDS

Anti-retroviral (ARV) drugs stop replication of the virus, keeping the viral count in the bloodstream down. The virus is still present, but the immune system gets a chance to repair itself, as it is not fighting an active virus. Many organisations support people living with HIV and AIDS. Many clinics and hospitals give information about HIV and AIDS support groups in your area. The National HIV and AIDS Helpline

provides a confidential, anonymous 24-hour, toll free telephone counselling, information and referral service for those infected with and affected by HIV and AIDS.

Strategies for living with tuberculosis, diabetes, epilepsy, HIV and AIDS

If you suffer from a disease, it is important that you educate yourself about the disease and find ways of adapting your lifestyle in order to live a high-quality life. Each disease has its own specific guidelines, but **there are some general strategies that you can adopt to help you cope:**

- Think positively.
- Educate yourself about your condition.
- Find a doctor whom you trust and follow your doctor's instructions carefully.
- Take your medication as instructed.
- Surround yourself with people who care about you.
- Eat healthily and exercise regularly.
- Find things to do that you enjoy.
- Avoid stressful situations.
- Get enough rest.
- Join a support group.
- Avoid bad habits such as smoking and abusing alcohol.
- Set small, manageable goals that will lead you to a bigger goal.
- Respect yourself – you deserve to lead a quality life.

Unit 3: Dealing with abuse and identifying threatening and risky situations.

Abuse is the verbal, physical, sexual or emotional maltreatment of another person. Neglecting a person is also a form of abuse.

Abuse between adults and children

Children should never be harmed intentionally in any way, especially by an adult. The following are ways in which adults abuse children:

- **Physical abuse** is the most easily recognised form of abuse, as it causes physical injury, such as marks and bruises.

- **Sexual abuse** is any type of inappropriate physical contact usually involving private parts.
- **Emotional abuse** happens when yelling and anger go too far, or when parents or adults constantly criticize or humiliate their children.
- When an adult chooses to neglect the basic needs of a child, such as food, housing, clothes, medical care or emotional support, we say the child is **neglected**.

Family violence can happen in any kind of family.

Abuse between peers

Bullying is a form of abusive behaviour. Bullying someone through intimidation, threats or teasing can be just as abusive as beating someone up.

When children are intentionally and repeatedly mean to one another using cell phones or the internet, we call it cyber bullying. People who bully others may have been abused themselves, but that does not give them the right to harm someone else intentionally.

Identify threatening and risky situations

Recognising abuse can be difficult for someone that has lived with the abuse for many years.

Growing up in a family where there is violence or abuse can lead a child to think that is the right way for people to treat one another.

There is no single reason why people abuse others. The factors below could be reasons why someone may lose control and hurt another person.

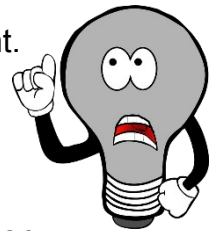

- Growing up in an abusive family can cause a cycle of abuse, where those family members may think that it is acceptable to abuse others.
- People who cannot control their anger or deal with stressful situations can be abusive.

- Drinking too much alcohol or taking drugs can make it difficult for some people to control their actions.
- Certain types of personality disorders or mental illnesses might interfere with someone's ability to relate to others in a healthy way.

Fortunately, people who abuse can get help and learn how to take responsibility for how they behave and learn ways to change their behaviour.

How to protect oneself and places of protection

Never put yourself in a risky situation. Listen to your elders. Always tell your parents or caregivers where you are going and what time you will be home. Leave a contact number, so that people can find you, and never go anywhere with a stranger. Be careful about giving out your personal details on the internet and do not arrange to meet someone that you have met on the internet without a trusted adult present. You have the right to be protected and the responsibility not to put yourself in danger.

Unfortunately, there are times when you will find yourself in a dangerous situation that is beyond your control. Bad things happen to good people, and it is not always those people's fault. Children who are being abused need to get help. **Keeping the abuse a secret does not protect anyone against the abuse; it is just more likely that the abuse will continue.**

Abusers are manipulative and they often say things such as, "if you tell someone, I will hurt your family." This is the abuser's way of preventing the abuse from being reported.

Places of protection and safety for victims of abuse

There are many innocent children being abused on a daily basis. When a case of abuse is reported, social structures, such as the Family Violence, Child Protection and Sexual Offences Unit (FCS) and the children's court, take action to rescue these children. The children are removed from their destructive living conditions and go to live in places of safety.

Places of safety are set up to help children who have been neglected or abused. These institutions are either funded by the government or are privately run. Children

are placed in a place of safety while the juvenile court decides what would be best for these children. Places of safety take care of a child's basic needs, they also strive to provide a loving environment where children can be helped emotionally and begin the healing process.

Professional people who work at places of safety can include social workers, counsellors, psychologists, nurses and teachers. These people aim to help children emotionally and to give them the coping skills that they need in order to become confident, happy individuals who can live happy and fulfilling lives.

Where to find help

When you are in need of help, for whatever reason, approach an adult whom you can trust. If you feel too embarrassed to speak about your problem, write a letter explaining what is happening and how it makes you feel.

Childline is a 24-hour toll-free line for children. Counselling is provided in all of the 11 official languages. Other organisations that help children who have been abused are the Proactive Education Group, the Teddy Bear Clinic and Child Welfare.

The South African Police Service (SAPS) have specialised units to deal with physical and sexual abuse and they have a responsibility to protect a child against further abuse.

Teddy Bear Clinic

Activity 4: Collage

Use the information that you have learned in this unit and make a collage explaining how to deal with abuse and identifying threatening and risky situations. In other words, say what abuse is and where you can go to find help. Your teacher will provide you with colour paper to do your collage on. Remember to past pictures and give descriptions. You will be assessed as follow:

Submission date: _____

Criteria	Marks
Collage is about abuse	/2
Is the collage neat?	/2
At least 4 pictures were used.	/4

Handed in on time	/2
Total	/10

Unit 4: Skills to develop memory: ability to recall

Memory is the ability of the mind to hold on to learnt information and knowledge of past events and experiences and to recall or remember that information and knowledge. Memory is an important skill that can be learnt and that should be developed and practised continually. This means it should be repeated many times in order to improve performance.

People use different leaning strategies to help them remember information and to recall it whenever it is needed.

Tips to develop memory:

Pay attention: you cannot remember something if you have never learnt it, and you cannot learn something if you do not pay enough attention to it.

Involve as many senses as possible: try to connect information to colours, textures, smells, sounds and tastes. The physical act of rewriting information can help imprint in onto your brain.

Connect information to what you already know: connect new data to information you already remember, whether it is new material that builds on previous knowledge, or something as simple as an address of someone who lives on a street where you already know someone

Focus on understanding basic ideas rather than memorising small details.

Repeat information you have already learnt: revise what you have learnt the same day you learnt it and at intervals thereafter. This is much better than trying to memorise work just before you have to know it.

Eat the right foods: you can increase how quickly you are able to respond to mental challenges and improve your memory by eating the correct type of food.

Use mnemonics

Mnemonics are simple tools to help you improve your memory. Some examples are:

- **Acronyms:** An acronym is a word or phrase made from the first letter or letters of keywords of the main idea. For example, the acronym AIDS stands for acquired immune deficiency syndrome.
- **Acrostic:** This can be a poem, rhyme or sentence. For example, if you need to remember the names of the planets in exact order: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus and Neptune. Write down the first letter of each planet's name, and make up a silly sentence with them, such as: "My very elegant mother just served us noodles."
- **Associations** works if you create clear, memorable images. Visualise a clear picture in your mind that is as odd or funny as possible. For example, in the animal kingdom there are carnivores, herbivores and omnivores. Carnivores are meat-eating animals, herbivores are plant-eating animals and omnivores eat almost anything.

Activity 4: Memory

1. Define the term memory in your own words.

2. Why do you think memory is a skill that can be learned?

3. Make up an acrostic to use to remember the sequence of the colours of the rainbow. Red, orange, yellow, green and blue.

4. Assess your memory skills by writing down five tips for developing memory.
