YEAR 1

APPLYING SAFETY AND HOUSEKEEPING

Introduction:

Health and safety laws are designed to protect you, the clients and fellow staff members. Personal health and safety and safe methods are essential.

This chapter explains:

How you can help to maintain a healthy and safe working environment for everyone.

How to respond during emergency situations such as fires and identifying the numbers to contact services for assistance during emergency situations.

1. Emergency numbers to remember for assistance during emergency situations:

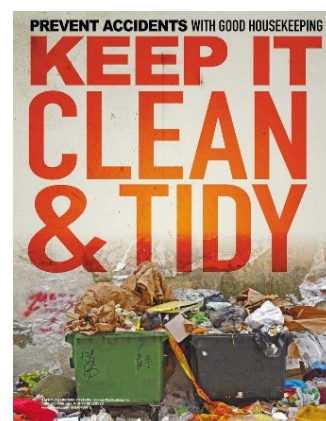

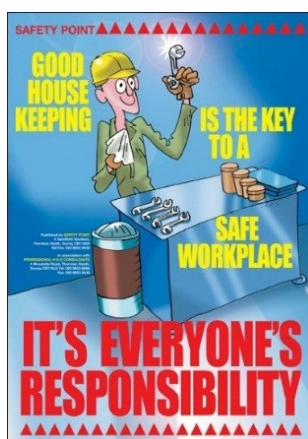

LESSON 1:

Date: _____

1. Look at the examples of safety poster promoting good housekeeping. Design now your own poster.

Marks will be awarded for:	Originality.	4
	The message.	4
	Use of colour.	4
	Neatness.	4
	Creativity.	4
	Total:	20 marks

2. Emergency situations that may arise at a salon or school:

What can you do in the meantime to manage property damage during an emergency.

The faster you act, the more likely you will be able to minimize damage and stress!

3. Housekeeping

Housekeeping must be a priority. Poor housekeeping can present hidden hazards that may cause fires, incidents, including tripping on loose objects in walkways, being hit by falling objects, and slipping on wet or dirty surfaces.

To maintain a safe and healthy workplace:

Ensure all spills are immediately cleaned up. Replace worn, ripped and damaged flooring and place anti-slip flooring in areas that cannot continually be cleaned, such as an entrance.

Maintain clean light fixtures to improve lighting efficiency.

Keep aisles and stairways clear. Consider installing warning signs and mirrors to help improve sight lines in blind corners.

Regularly inspect, clean and repair all tools. Do not use damaged tools.

4. Fire

Fires occurring in salons are more likely to arise from electrical faults, gas leaks or smoking. Faulty or bad maintained electrical equipment, such as steamers or wax machines, may malfunction and overheat.

All workplaces must have fire-fighting equipment that is easy to access and in working order. There are different fire extinguishers for different types of fire but unless you have had training, it is best not to try to put out the fire yourself as you could put yourself and others at risk. Very small fires can be put out using a fire blanket or a bucket of sand.

Fire safety measures should be put in place in your workplace, including pre-planning for emergencies. You must have a fire evacuation plan and it should be practised regularly in the form of fire drills. Fire protection equipment are essential aids – keep fire extinguishers and fire blankets well-placed. You may think that a fire will not happen in your workplace, but it can.

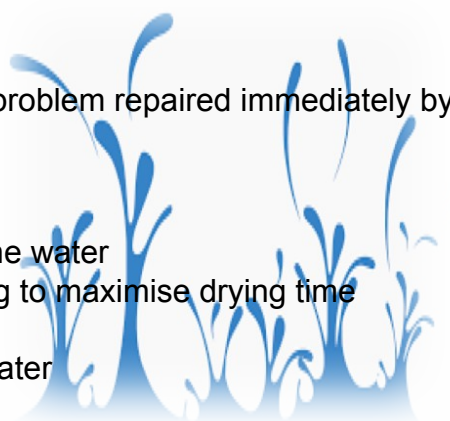

Steps to follow during a fire:

- Open windows to ventilate if possible
- Do not use any electrical equipment until they have been cleaned
- Do not attempt to wash the surfaces as you might slip and fall
- Close doors in affected areas to minimize the smoke odour
- Do not consume food items exposed to smoke
- Stay away from affected rooms until it's been cleared by emergency personnel

5. Water damage:

- Locate the source of water and have the problem repaired immediately by shutting off the main water supply
- Make sure all drains are clear
- Remove any excess water
- Remove any possessions in the path of the water
- In the summer, turn on the air-conditioning to maximise drying time
- Do not use any electrical equipment
- Do not consume food items exposed to water

LESSON 2:

DATE: _____

Once the word search is completed, find a picture of one the search words.

SAFETY AT WORK WORD SEARCH

P	D	R	A	B	U	F	Y	S	K	Z	S	D	T	F

DUST	INJURY	TRIP
FALL	MEDICAL	WARNING
FIRE	NOISE	

© 2015 by The McGraw-Hill Companies, Inc.

Emergency preparation matters !

By preparing **mentally** and **emotionally**, you can increase your **confidence** and increase the ability to handle a **real-life** situation.

Three **(3)** steps that should be followed:

1. PLAN

- ♥ You need to think ahead of time of what might happen
- ♥ Being prepared can reduce fear and anxiety

2. EVALUATE

- ♥ Having a plan helps you to be prepared
- ♥ Understanding your response to make proper decisions
- ♥ You may only have a few seconds to evaluate the situation, and these questions can be asked:

Should we evacuate?
Where are the exits?
Should we stay inside?
Who shall we contact for help?
How can we help each other?
What do we need right now?

3. RESPOND

- ♥ Once you have evaluated the situation, you are able to choose how you going to respond
- ♥ DO NOT take unnecessary risks
- ♥ Remain as calm as possible and use common sense

Your salon will have a set safety procedure for evacuation, which must always be followed:

Building evacuation procedure in the event of fire.

On discovering a fire:

- Sound the alarm.
- Dial 10177.
- Ask for the Fire Service in your town / suburb.
- Tell the Fire Service Control Operator:
 - ❖ What is on fire
 - ❖ What is the address
 - ❖ Where is the nearest main road
 - ❖ Which town you are in
- Leave the building from the exit nearest to you.
- Go to the agreed assembly point.

On hearing the fire alarm:

- Immediately evacuate the building via the nearest exit and go straight to the assembly point.
- Ensure all doors are closed behind you to slow down the spread of the fire.
- Assist visitors to evacuate the building.
- Ensure you follow instructions from the fire safety wardens or marshals.
- Do not run or panic.
- Do not stop to collect personal belongings.
- Do not open or touch a door beyond which you have reason to believe there is a fire.
- Do not use the lift.
- Do not return to the building until you have been told it is safe to do so.

LESSON 3:

DATE: _____

Fill in the missing words with regards to fire's that can occur in a salon?

1. Fires arise form _____ faults, _____ and _____.
2. Bad maintained electrical equipment, such as _____ or _____ may malfunction.
3. Salons must have _____ equipment that is easy to access.
4. By trying to put out the fire yourself, you can put _____ and _____ at risk.
5. _____ must be well placed in a salon.
6. Salons must have a fire _____ and must be practised regularly.
7. Small fires can be put out by using a _____ or a _____.

DIFFERENT FIRE-FIGHTING EQUIPMENT FOR SMALL FIRES

1. Fire blanket

2. Bucket of sand

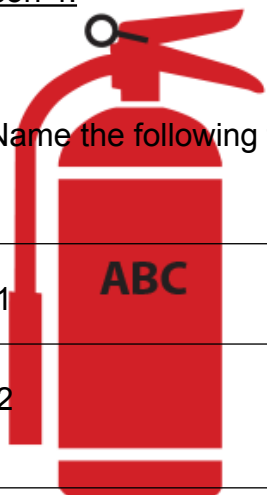

3. Different fire extinguishers for different types of fires

Lesson 4:

Date:

1. Name the following fire equipment:

1.1				
1.2				
1.3				

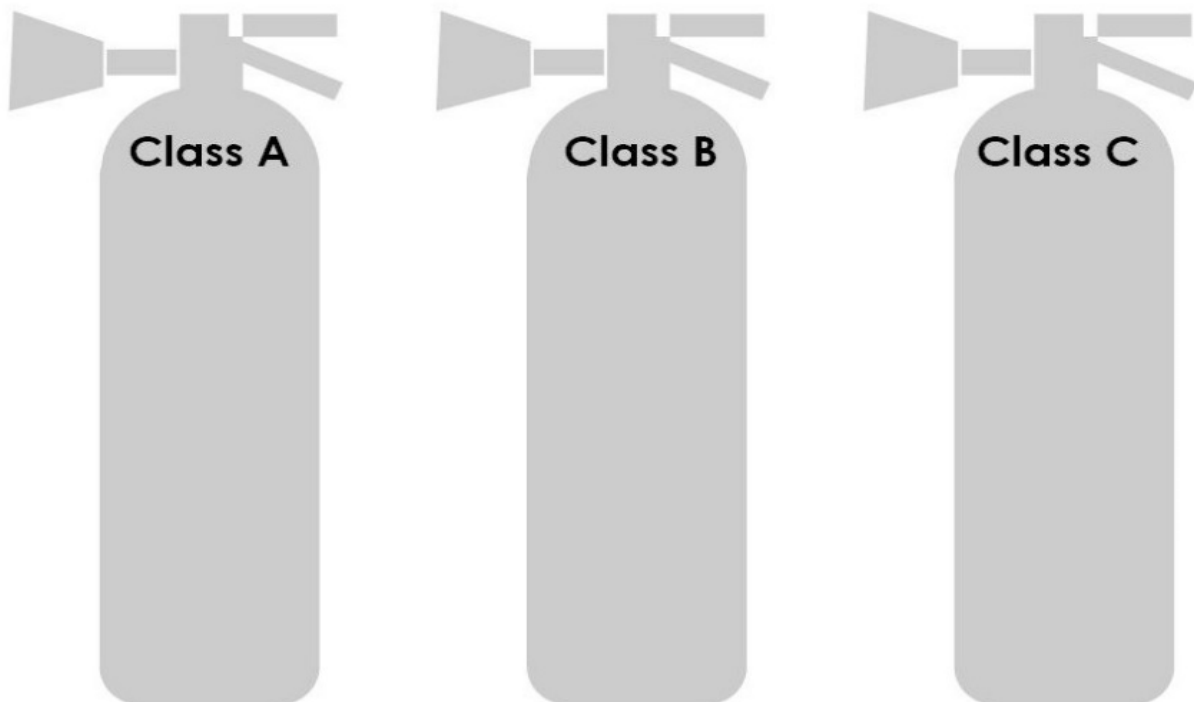

2. Identify the following emergency service numbers:

2.1	10177	
2.2	10111	
2.3	082 911	

3. Name the four tips to maintain a safe and healthy workplace:

1. _____
2. _____
3. _____
4. _____

4. Name a few objects that you will extinguish with the following extinguishers.

5. Complete the following:

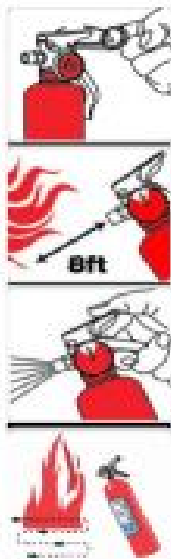

How to use a fire extinguisher?

P _____ the pin

A _____ at the base of the fire

S _____ the handle

S _____ from side to side

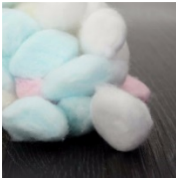

6. Match the signs with the objects

Sign	Fire equipment
	
	
	
	
	

IMPLEMENTING SANITATION TO THE WORK ENVIRONMENT:

-IDENTIFYING the tools and equipment needed for manicures and pedicures-

Nail polish remover 	Removes all nail polish from the nail
Warm soapy water 	To wash and soften the hands
Nail cutter 	To cut and shorten your free edge
Emery board 	To shape and smoothen rough edges on the free edge
Orange stick 	To push back cuticles, and remove dirt from underneath the nail It can be used to remove excess nail polish in the nail groove.
<u>Cuticle oil</u> 	Hydrates and soften cuticles

Cuticle nipper 	Remove dry and hanging cuticles
Nail brush 	Scrubs and cleans the nail
3-way Buff and shine 	Removes ridges and smooth the nail surface Shines the nail
Hand exfoliator/scrub 	Removes dead skin cells and softens the hands
Disinfectant 	Kept in small jars for soaking the nipper and nail cutter during treatment
Cotton wool 	Used to tip orange sticks and apply nail polish remover to the nail

Base coat 	Protects the nail
Nail polish 	Nail colour, chosen by the client
Top coat 	Protects the nail colour
Towels 	To protect the treatment area and dry the hands
Kidney bowl 	To keep the sterilised nail nipper and nail cutter
Dust bin 	To dispose of used cotton wool and tissue

GUIDELINES FOR CLEANING AND DISINFECTING MANICURE / PEDICURE EQUIPMENT:

In the salon, all tools and implements or equipment must be properly cleaned and disinfected before it comes into contact with a client.

PROPER CLEANING AND DESINFETION

- ♥ Everything in the salon has a hard or soft surface E.G. manicure table tops, arm cushions, manicure bowls, towels and buffers
- ♥ Any one of these implements coming into direct contact with a client's skin is considered **CONTAMINATED**
- ♥ All contaminated surfaces must be thoroughly and properly:
CLEANED AND DISINFECTED
- ♥ To be properly cleaned, the surface must be scrubbed of debris (contamination) and rinsed with clean water
- ♥ Proper cleaning (called SANITIZING) must be done before the DISINFECTION step

PROPER PRODUCT APPLICATION

- ♥ Some products can become contaminated if not properly used E.G. lotions, scrubs, paraffin wax, masks and oils.
- ♥ Cuticle oils should not be applied with a brush that touches your clients skin
- ♥ Lotions should be applied with a spoon to prevent contamination

TO AVOID PRODUCT CONTAMINATION ALWAYS:

- A) **Dispose** of used products between clients
- B) Use single-**disposable** implements to remove products from containers
- C) Use an **applicator** bottle or dropper to apply the products

BASIC SALON SANITATION:

- ♥ Therapists should clean both their hands and their clients' hands or feet before each treatment
- ♥ Waterless hand sanitizer can be used, if your hands are contaminated - they should be washed with liquid soap and running water.
- ♥ Cleaning the hands reduces the risks of spreading germs from client to client

- ♥ All implements, equipment and materials must be properly cleaned and disinfected before servicing each client
- ♥ If any metal tools come into contact with blood, body fluid, infection or unhealthy conditions, it must be cleaned and disinfected **IMMEDIATELY**
- ♥ If a nail file comes into contact with blood, it must be thrown away **IMMEDIATELY**
- ♥ STORE clean disinfected tools in a clean container that is separate from the used tools and files
- ♥ "Sanitizing" means cleaning to remove all visible debris" E.G. cleaning your foot rasp
- ♥ Use clean towels or manicure pillows for each client
- ♥ Products such as creams, scrubs, masks and oils must be used in a sanitary manner to prevent contamination. E.G. cuticle oils should not be used with a brush to avoid product contamination
- ♥ If blood or bodily fluids comes into contact with the salon surface, the therapist should put on protective gloves

METHODS OF PROPER CLEANING:

Proper cleaning requires **liquid soap, water** and the use of a clean **scrub brush** to **remove all visible debris**

All items should be scrubbed under running water

Different items are cleaned in different ways – depending on what they made of

The cleaning step should be properly done before it can be disinfected.

All items must be thoroughly rinsed and dried with a clean cloth before they are placed into a disinfectant

Cleaning (Sanitation)

<i>Method</i>	<i>Examples</i>
<i>Scrub brush</i>	Nail files and buffers
<i>Acetone soak</i>	Metal cuticle pushers
<i>Washing machines</i>	Cloth towels and bed covers
<i>Wipes</i>	Electrical equipment table tops

LESSON 5:**Date:** _____

1. Match Column A with Column B with regards to manicure equipment.

Column A – Equipment		Column B – Explanation		Answer
1	Towels	A	Disposed of used cotton	
2	Hand exfoliator	B	Nail colours	
3	Kidney bowls	C	Scrubs and cleans the nails	
4	Cotton wool	D	To protect the treatment area or dry your hands	
5	Nail polish	E	Used with nail polish remover	
6	Cuticle oil	F	Removes dead skin cells and softens the hands	
7	Nail cutter	G	Hydrates and softens the skin	
8	Nail polish remover	H	To keep the nail clipper and cuticle cutter	
9	Nail brush	I	To cut the free-edge	
10	Dustbin	J	Removes all nail polish from the nails	

2. How do you avoid product contamination?

1.

2.

3.

3. Fill in the missing words with regards to basic salon hygiene.

1. Therapists must clean their _____ and their client's _____ before each treatment.
2. Cleaning the hands reduces the risk of spreading _____.
3. If a metal tool comes into contact with blood, it must be _____ immediately.
4. _____ means cleaning.
5. If blood comes into contact with the salon surface, the therapist must wear protective _____.

4. Find pictures of disinfectant products?

5. Identify the following tools and products. Label them and give a brief description of their functions.

	
1.	2.
	
3.	4.
	
5.	6.
	
7.	8.
	
9.	10.

♥ Wet Sterilisation

The organisms are destroyed through moist heat. This results in the death of the organisms. Moist heat method is used for heat sensitive materials.

Through wet sterilization, the most resistant of the spores require a temperature of 121°C for around half an hour. It is a more effective method when compared with dry heat sterilization. This can be supported by the fact that through wet heat, sterilization can be achieved at lower temperatures in a shorter duration.

- **Prepare the solution.**
- **Tools are completely submerged.**
- **Cover with a lid to prevent contamination.**
- **Before submerging, wash with warm soapy water.**
- **After removing tools from the solution, rinse with sterile water and store in a clean dry cabinet.**

♥ Dry Sterilization – UV cabinet sterilizer

Dry heat is used for sterilizing different materials. Heated air is used in this process. As compared to the wet sterilization, the temperature in this method is higher. The temperature is usually higher than 180 °C.

- **Airtight cabinet containing fumigant.**
- **Tools are placed in a cabinet until ready for use.**
- **Fumigant= 1 tbsp Borax + 1 tbsp Formalin.**
- **Place on a tray at bottom of cabinet.**
- **Vapours will form inside the cabinet sanitizing the tools.**

PROPER DISINFECTION OF MULTI-USE TOOLS AND EQUIPMENT:

- ♥ Multi-use items → equipment that can be used more than once and be disinfected.
- ♥ The equipment must be properly cleaned while retaining (keeping) its usefulness and quality
- ♥ They are designed to be used more than once, but they must be cleaned properly between clients
- ♥ Examples of multi-use items
 - Towels
 - Manicure bowls
 - Cuticle nippers (cutters)
 - Cuticle pushers
 - Some nail files or buffers

MULTI-USE ITEMS COME IN THREE (3) GROUPS:

- 1 → Hard non-absorbent items made of hard materials that do not absorb liquids
E.g metal, glass or plastic
- 2 → Porous and/or absorbent items made of plastic or wood, that can absorb liquid
E.g. scrub brushes, buffers, cloth towels
- 3 → Self disinfecting items that will not support the growth of bacteria, viruses or Fungi. E.g. nail polish brushes
These products don't need to be disinfected or cleaned

SALON HYGIENE:

Everyday many clients and staff enter the salon and they bring with them billions of GERMS. There are 3 main types of **germs**

Germ

Disease –
causing bacteria
and viruses

FUNGI
VIRUSES
BACTERIA

Many of these germs are harmless but others cause infection – we all have a duty to prevent the spread of infections and infestations in the salon.

Infections and infestations

What would you say is an infection in your own words?

Pathogens

Harmful bacteria
that cause
infection

→ Infections are caused when harmful bacteria enter your body – some are helpful others are harmful
The harmful bacteria are called **PATHOGENS** and these cause infection...

When the body becomes aware of an infection, it tries to protect itself.

- ♥ Increase in blood flow to the area which makes it red and inflamed
- ♥ The red blood cells clot to prevent bleeding in a wound
- ♥ White blood cells attack the bacteria and destroy it – thus forming pus
- ♥ If a pore on your skin gets infected, it goes red, swells up and pus forms.
- ♥ These are all signs of INFECTIONS and as a beauty therapist you must recognise these signs and be careful

Infections and infestations can be caused and spread by:

- ♥ Close contact with your client
- ♥ Dirty and infected tools
- ♥ The warm air in a beauty salon

Contamination

Passing of an infection from one person to another through uncleaned objects

CAUSES OF INFECTIONS???

Infections can occur in TWO different ways – direct or indirect

CONTAMINATION

Direct contamination is when an infection passes from one person to another. Give me some examples?

→ touching the skin, sneezing, coughing and breathing

Indirect contamination the infection passes from one person to another through unclean objects. Give me some examples?

→ used towels, dirty tools, wet floors ...

DISEASES CAUSING BACTERIA

FUNGI

♥ Fungal diseases grow well in warm, damp places like between our toes.

♥ It causes **ATHELETES FOOT** that grows on the feet
It causes red blisters on the feet which burst, and the skin goes dry and flaky

♥ Its causes **RINGWORMS**
Red patches on the abdomen (stomach) and face which spread outwards and heal from the centre, leaving a ring

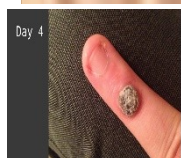

♥ It causes **RINGWORMS ON THE NAILS**
Nails become yellow and grey, they become weak and separate from the nail bed

BACTERIA

- ♥ 100's of different types of bacteria
- ♥ They everywhere around us – in the air, soil, water and on the skin
- ♥ It causes **IMPETIGO**
Red itchy patches on the skin – face – the patches blister and form a crust
- ♥ It causes **CONJUNCTIVITIS**
The skin around the eye is red and itchy, very sore and inflamed with pus (HIGHLY CONTAGIOUS) Can be spread through towels

VIRUS

- ♥ Viruses need living tissue to survive – so they grow inside your body
- ♥ Viruses must be treated with antibiotics
- ♥ Its causes **COLDS AND FLU, MEASLES, MUMPS AND CHICKEN POX**
- ♥ It causes **HERPES SIMPLEX (COLD SORES)**
Red, itchy, crusty patches on the lips
- ♥ It causes **WARTS**
Vary in size, shape and texture, raised “bumps” on the skin, can be found on the face, hands or feet

Table to help you remember the different types of infections

Infection	looks like	area of body	cause
athlete's foot	red blisters that burst and go dry and scaly	feet	fungi
ringworm	red patches which spread outwards, then heal from the centre leaving a ring	abdomen, limbs and face	fungi
impetigo	red, itchy patches which blister and form crusts	face	bacteria
conjunctivitis	skin around the eye is red and itchy	eyes	bacteria
herpes simplex (cold sores)	small red, itchy, crusty patches	lips	virus
verrucae or warts	small, raised, scaly bumps	hands and feet, sometimes the knees	virus

LESSON 6:

Date: _____

1. What is an infection? Give two examples

2. Name two different ways that an infection can be caused with examples of each.

3. What is a fungus? Give two examples of infections caused by fungi.

4. What are bacteria? Give two examples of infections caused by bacteria.

PERSONAL HYGIENE:

PERSONAL HYGIENE is of great importance in a salon. It is essential to prevent the spread of infectious diseases and because your client wants a therapist with high hygiene standards !!!

LESSON 7:

Date: _____

Masego comes into the salon looking very untidy – her hair is a mess, her make-up is too heavy, her clothes are the same ones she was wearing yesterday and she does not smell very fresh.

Masego and her friend Ronnie went to a new club and got home very late. They stayed up the whole night talking and only slept on the floor for about two hours. They had a great time, but Masego had to sleep in her clothes!

Do you think Masego is fit for work the next day?

Masego says her clothes are a bit crumpled and smelly but no-one, she will change before she goes out again, she is meeting another friend.

What would you say to Masego if you were in her boss? What do you need to tell her about her personal hygiene in the salon?

PREVENTING BODY ODOUR

Antiperspirant

Reduces the size of the pore so we sweat less

Deodorant

It is similar to an antiseptic because it stops the growth of bacteria.

As a PROFESSIONAL you work closely with clients and salons can be warm because of facial steamers or hair dryers.

BACTERIA likes warm conditions – if you are hot and sweaty, body odour can occur!

IT'S NOT A PLEASANT SMELL

So, you need to take a daily bath or shower and use **ANTIPERSPIRANT** and **DEODORANT**.

The difference between an antiperspirant and a deodorant?

- A deodorant acts as a mild antiseptic to mask the odour but not reduce the sweating
- An antiperspirant reduces sweating

Anti-septic comes in different forms – in a roll on or an aerosol bottle. When you develop an allergic reaction – STOP using the product!

ORAL HYGIENE

Bad breath is horrible!

The causes are:

- ♥ Food being stuck between the teeth
- ♥ Digestive problems (stomach problems)
- ♥ Not brushing your teeth
- ♥ Smoking

To AVOID bad breath, you must

- ♥ brush your teeth at least twice a day
- ♥ visit the dentist regularly for check ups
- ♥ use anti-septic mouthwash or dental floss to remove food
- ♥ avoid eating garlic or strong-smelling food

CARING FOR YOUR NAILS AND HANDS

Your hands are very IMPORTANT as a beautician; they are the tools of your trade.

Your nails are always in view, so make sure they are clean throughout the day.

Take time to care for your own nails and keep them short so you don't scratch your clients.

Bacteria - grows under DIRTY nails & LONG or BROKEN nails can scratch your client and spread INFECTIONS.

Any cuts or abrasions should be kept covered to prevent **CROSS-INFECTION**.

Cross-infection - Transfer of germs and bacteria through poor hygiene.

IMPORTANT THINGS TO REMEMBER ARE:

- ♥ Wash your hands before working on your client or before eating food
- ♥ Nails should be kept clean and well-manicured.
- ♥ Always wear protective gloves when using chemicals; this reduces the risk of **DERMATITIS** - Inflammation of the skin.

CLOTHES AND JEWELLERY

Most salons insist that you wear a uniform and an apron – your clothes should be comfortable to wear.

Too much jewellery can catch in your client's hair – it is also a place for BACTERIA to grow and cause **CROSS-INFECTION**

- ♥ Washed and clean clothes should be worn each day
- ♥ Wear cotton rich clothes, this allows air to flow through and they absorb perspiration (sweat)
- ♥ Avoid dangling jewellery they can scratch your client

- ♥ Avoid belts with loops, as they can get caught on furniture and cause an accident

CARING FOR YOUR FEET

YOU are on your feet for long hours every day, shoes should be COMFORTABLE, CLEAN and SMART

NO HEELS !

- ♥ I'm sure you all wash your feet regularly, but do you dry them properly in between your toes?

Warmth and sweat encourages the growth of bacteria.

- ♥ Avoid open shoes in case you drop a sharp object like a scissor or spill hot wax on your toes as this can lead to accidents
- ♥ Use foot powder as this will absorb perspiration (sweat)

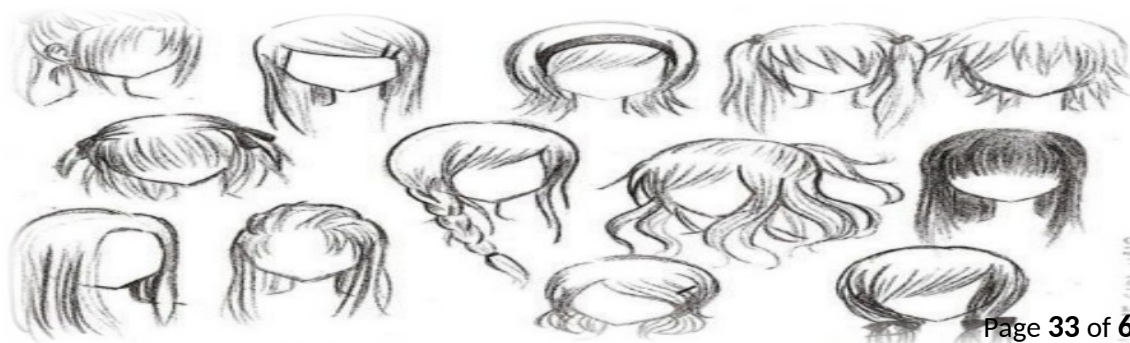

CARING FOR YOUR HAIR

You are a WALKING ADVERTISMENT for your profession!

Keep your hair clean, in a good condition and styled

Long hair should be tied up and kept out of your face as it can cause **CROSS-INFECTION** between you and your client

Do not use other therapist UNSTERILISED equipment on your hair as it can be contaminated

LESSON 8:

DATE: _____

1. What causes body odour?

2. What should you do to avoid bad breath?

3. What is dermatitis?

4. Why should you always have short finger nails?

5. Name five (5) things to think about concerning healthy feet in a salon?

IMPORTANCE OF PERSONAL HEALTH

IT IS YOUR RESPONSIBILITY TO ENSURE THAT YOUR OWN HEALTH IS NOT NEGATIVELY AFFECTED BY THE SALON

POSTURE

Do you know what the word posture means? Write your own answer.

→ Posture is how you 'hold' yourself when seated, standing or walking.

GOOD POSTURE will help you work longer hours without getting tired

POOR POSTURE looks sloppy and doesn't give your client a good impression of you

POOR POSTURE leads to tiredness or injuries as your body weight is not evenly distributed

How would you describe good posture? Write down three (3) things that indicate good posture.

→ good posture include standing up straight with your shoulders back, Tummy pulled in and your chin forward

Keep your back straight when sitting down not 'folding' in the middle

Standing on both feet with your posture being balanced

CLEAN GENE Word Hunt

Hunt through the puzzle to find the following words. Circle each one when you find it as shown below. Words can be spelled out in many different directions: horizontally, vertically or diagonally — even upside down.

Germ	Cut	Cough	Virus	Fever	Fungi
Disease	Sanitize	Clean	Sick	Exercise	Organism
Sneeze	Bacteria	Aches	Hands	Soap	Hygiene
Wash	Airborne	Healthy	Skin	Microbe	Transmission

Z S A N I T I Z E A M Y E R X J G O C H

 R D L I H C Z H A N D S S W N M O D V C
 T Q C R V V B K Y C T S T D L I G N U F

This procedure must be followed by all the therapists

DEFINITION: → body fluids are BLOOD, FECES, URINE, VOMIT AND SALIVA.

ROLES AND RESPONSIBILITIES:

♥ SUPERVISORS:

Ensuring that all therapists involved in a body spill clean-up are supplied with the appropriate protective equipment.

The protective equipment must be worn during clean-up, disinfection and disposable procedure

♥ STAFF:

Responsible for wearing the protective equipment and following procedures

PROCEDURES

LARGE SPILL OF BODILY FLUIDS such as a sewage leak

- rubber gloves;
- rubber boots and
- water proof coveralls must be worn to prevent splashing

SMALL SPILL OF BODILY FLUIDS such as a small pool of blood

- rubber gloves and
- rubber boots must be worn to prevent splashing of blood

DRIED BLOOD OR SMALL SPILL OF BODILY FLUIDS such as a nose bleed

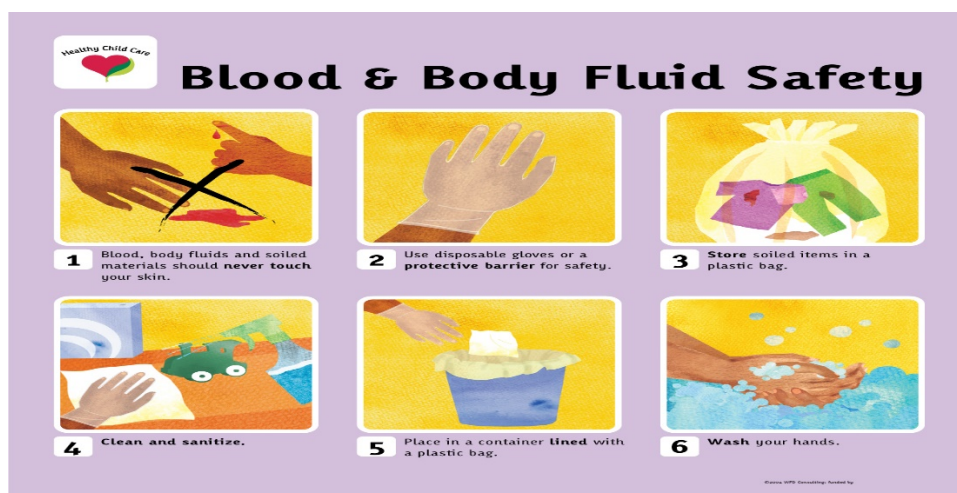

- just rubber gloves to be worn

CLEAN UP PROCEDURES:

Large or small spills

- Use PAPER TOWELS to soak up the spill
- pour DISINFECTANT directly onto the materials (paper towels)
- Pour 10% BLEACH SOLUTION onto the materials (paper towels) and leave for 10-30 minutes
- After the materials (paper towelling) are picked up and put in a trash bag, pour more DISINFECTION on the spill and wipe up with paper towelling

BASIC HYGIENE AND ACCIDENTAL EXPOSURE:

- ♥ Therapists must wash their hands with SOAP and RUNNING WARM WATER directly after removing their RUBBER GLOVES
- ♥ DISINFECT all equipment that can be used again
- ♥ By accident the skin comes into contact with body fluids – wash the area with ENOUGH SOAP and WATER
- ♥ If the eyes or mouth come into contact with body fluids – wash with WATER
- ♥ Report all accidental exposures to body fluids to the supervisor

1. Sanitisation

Regular cleaning and washing using warm soapy water promotes health by removing dirt and reducing the growth of germs and bacteria. You can wash your hands with soap and water or use an alcohol-based hand sanitiser.

1.2 Hand hygiene should be performed:

- Before and after contact with each client;
- After eating or smoking;
- After going to the toilet;
- After blowing your nose, coughing or sneezing;
- After handling laundry;
- After contact with blood or other bodily substances; and
- After removing gloves.

How to wash your hands:

1. Wet your hands with warm, running water and apply liquid soap or use a bar of soap.
2. Lather well.
3. Rub your hands vigorously together for 15-20 seconds.
4. Scrub all surfaces, including the backs of your hands and wrists between your fingers and under your fingernails.
5. Rinse well.
6. Dry your hands thoroughly with a disposable towel.
7. Use a paper towel to close the tap.

Hand Wash

1.3 Hand hygiene using an alcohol-based hand rub

Alcohol-based hand rubs can be a fast and effective way to sanitise hands. They can reduce the number of germs on your hands. They do not remove dirt from your hands.

An alcohol-based hand rub should contain between 60% – 80% alcohol. An alcohol-based hand rub may be used for hand hygiene **when hands are not soiled**.

Apply alcohol hand rub using the following method:

- Apply the amount of hand rub recommended by the product manufacturer to the palms of hands;
- Rub hands together, making sure you cover in between fingers, around thumbs and finger tips;
- Rub until hands are dry.

LESSON 9:

Date: _____

Design your own poster where you explain how important hand washing is.

Marks will be awarded for:	Originality.	4
	The message.	4
	Use of colour.	4
	Neatness.	4
	Creativity.	<u>4</u>
	Total:	20 marks

BONES OF THE HAND

The **RADIUS** and the **ULNA** are the two long bones of the forearm.

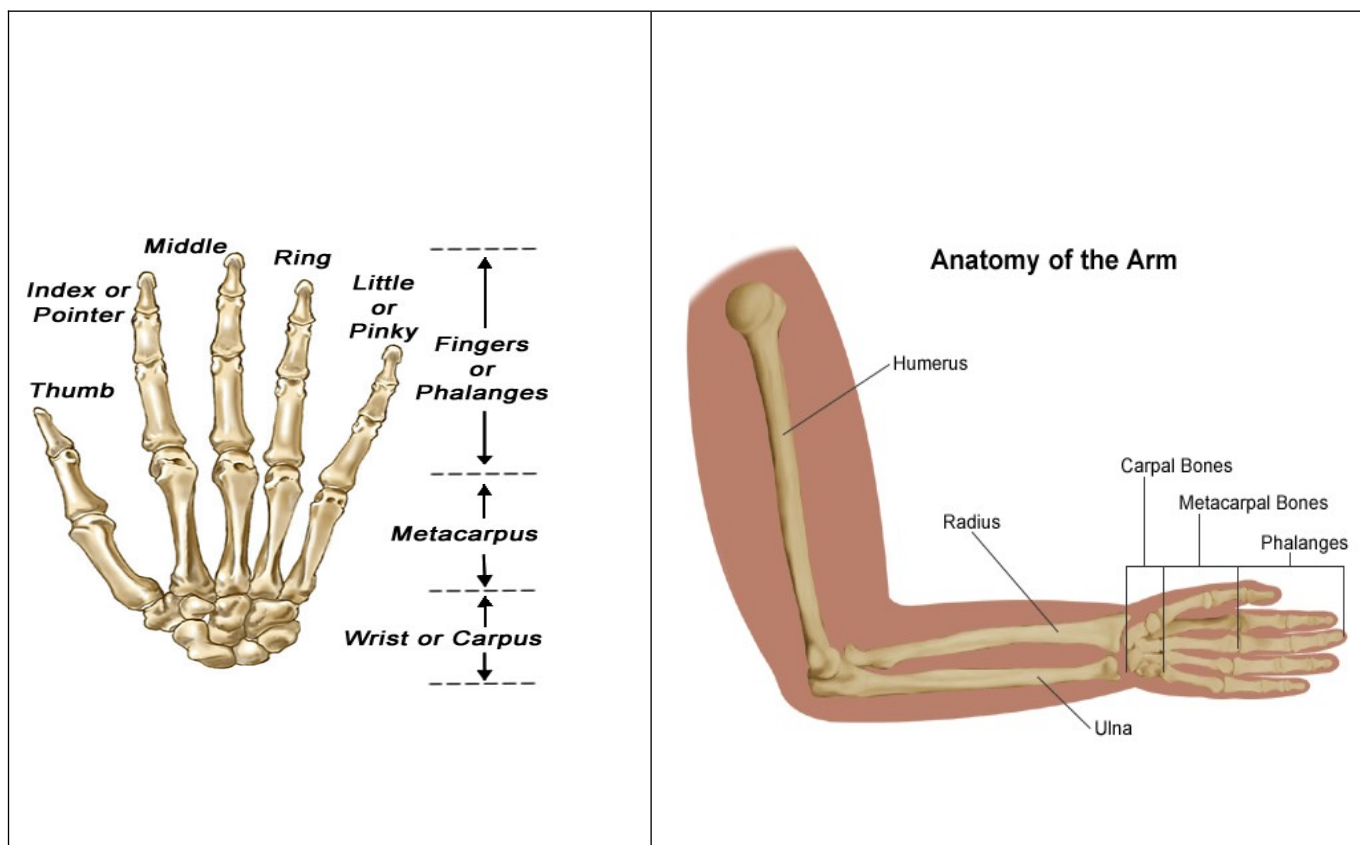

The **ULNA** is situated on the little finger side (**PINKY**) of the arm.

There are eight **CARPAL** bones in the wrist, arranged in two rows.

The wrist is called the **METACARPALS**. **METACARPALS** are different in lengths and each one moves with one of the five digits (fingers and thumbs).

Fourteen small bones make up your fingers

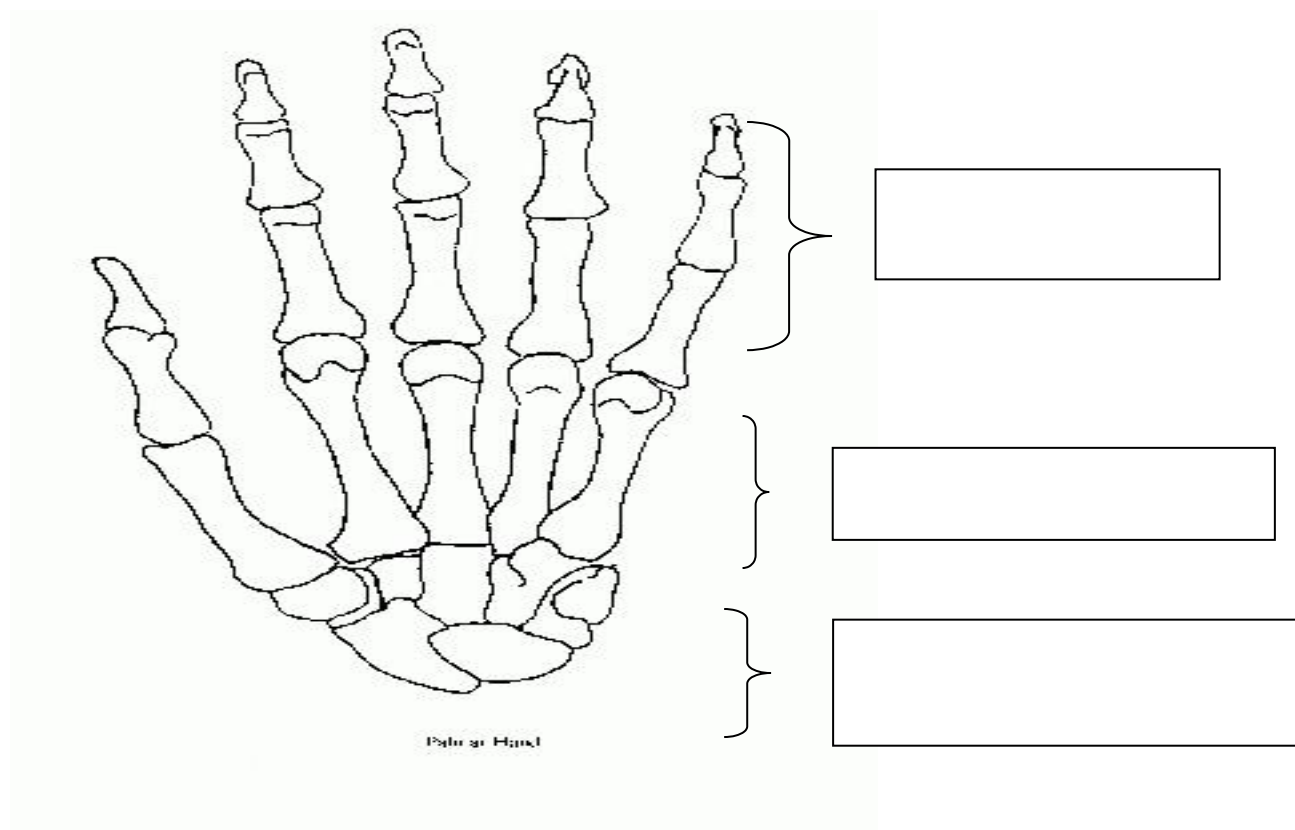

There are three bones in each finger and two in each thumb. These bones are called the **PHALANGES**.

LESSON 10:

DATE: _____

1. Label the diagram of the hand bones

2. Colour in the phalange with orange
Colour in the metacarpals in blue
Colour in the carpals in red

3. Count the number of bones in your hand.

How many phalanges are there?	
How many metacarpals are there?	
How many carpals are there?	

MUSCLES OF THE HAND

Muscles work in pairs to produce movements at the joints.

Muscles are made up of fibres and always pull in the direction of the muscle fibres.

- FLEXORS – bend the parts to which they are attached.
- EXTENSORS – straighten the parts to which they are attached.
- ABDUCTORS – pull parts away from the centre of the body
- ADDUCTORS – pull parts towards the centre of the body

Hand Muscles

1. Abductor

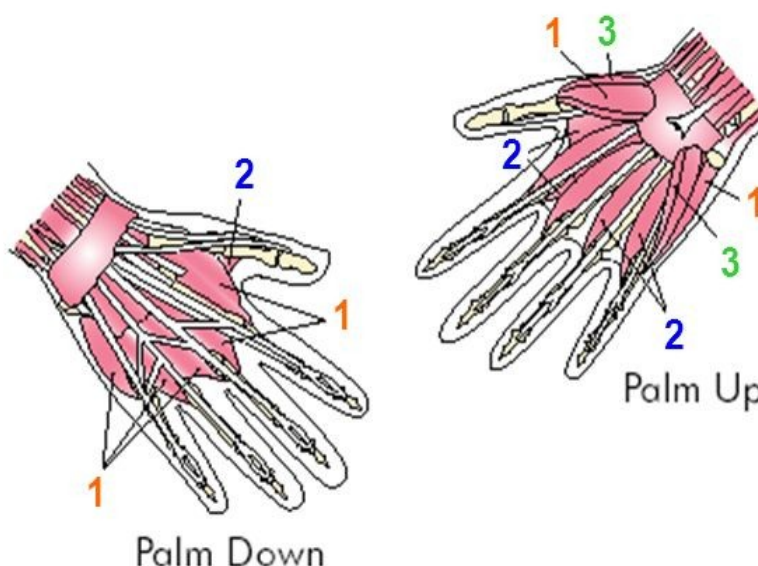

separates fingers

2. Adductor

draws fingers together

3. Opponens

give the ability to grasp or make a fist

• Adductor

BONES OF THE FOOT

The **TIBIA** and **FIBULA** are the two long bones in the lower leg.

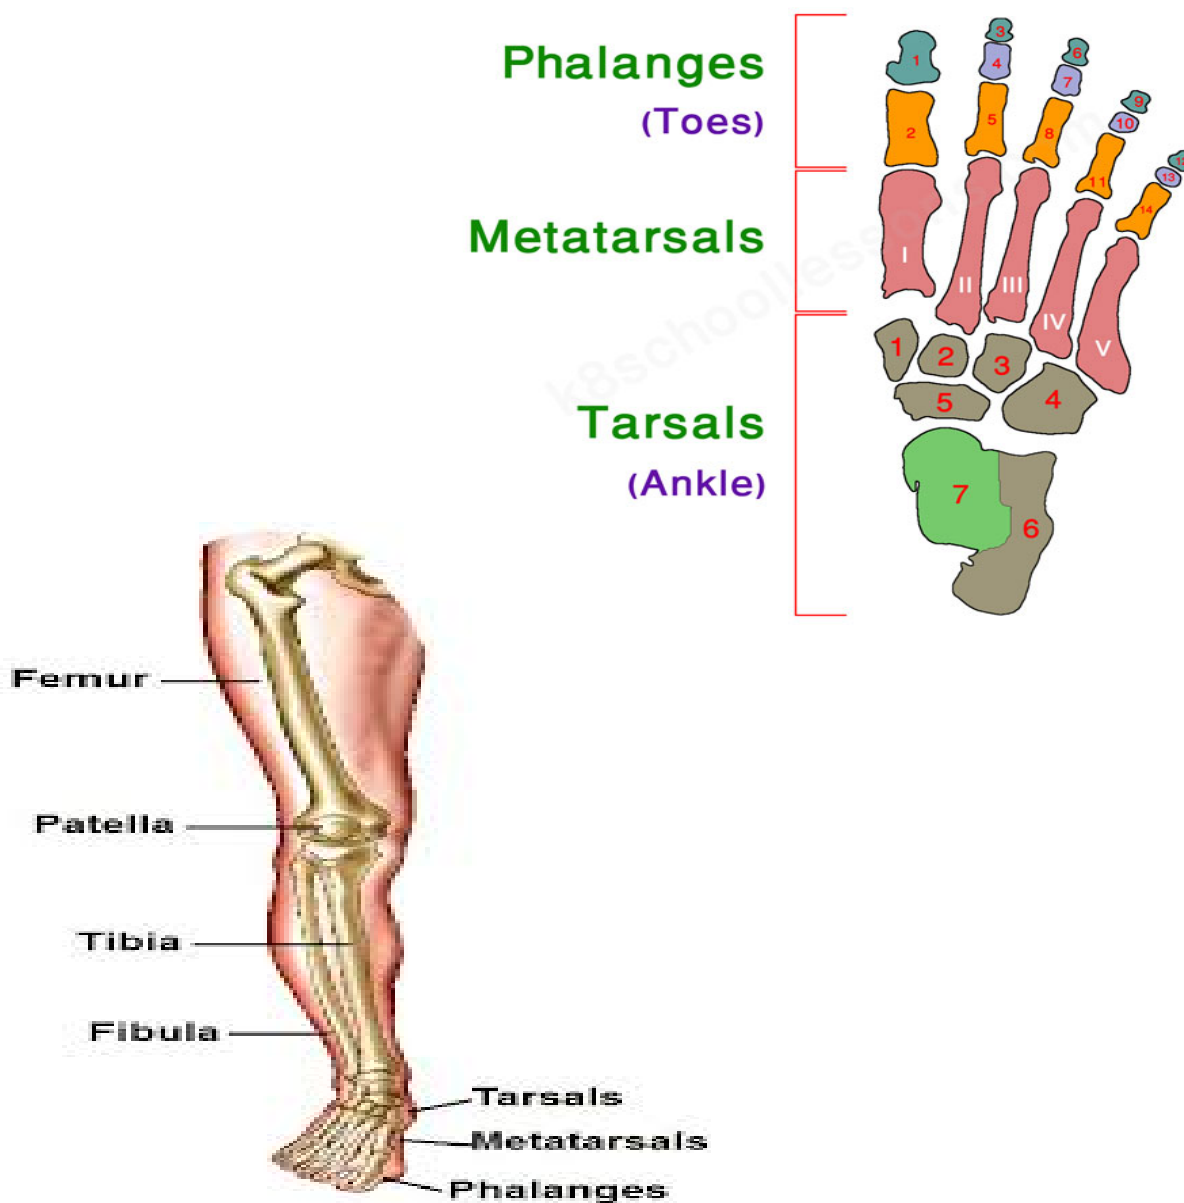

The **FIBULA** is situated on the little toe side of the leg.

The **TIBIA** is your shin.

The ankle is made up of 7 bones called the **TARSALS**

The bridge of your foot is called the **METATARSALS**. Each one moves with one of the five toes

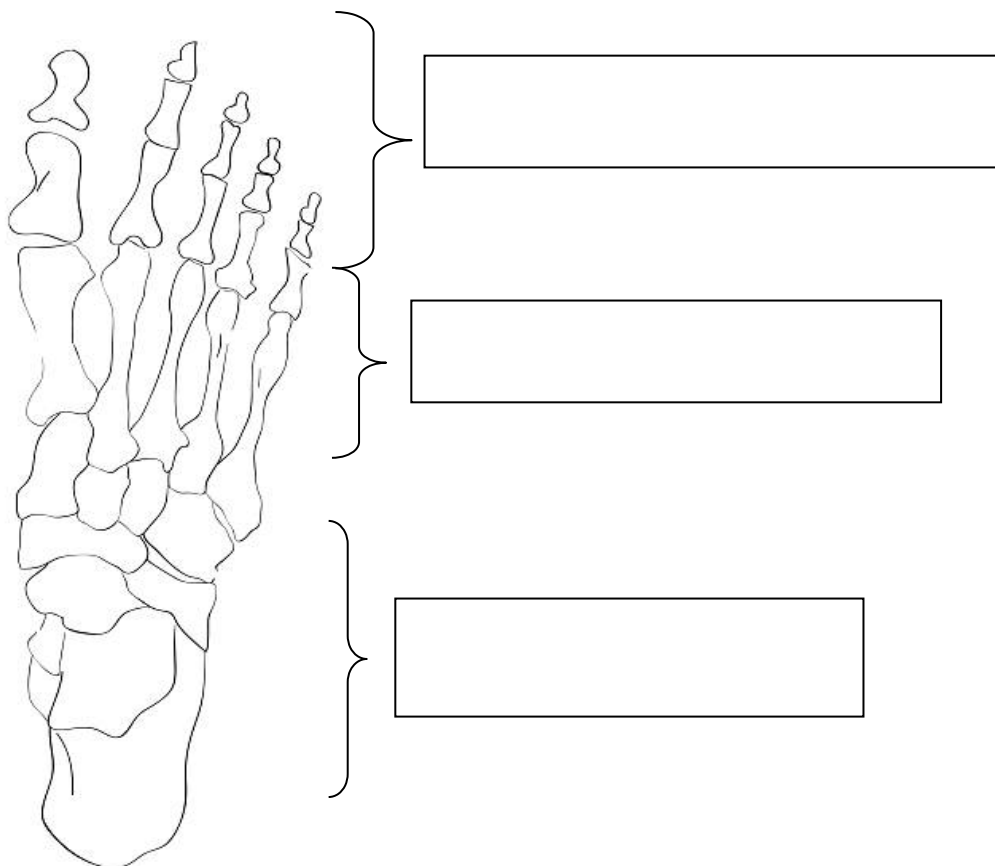

There are fourteen phalanges. These are the small bones with make up the toes.

LESSON 11:

Date: _____

1. Label the diagram of the foot bones

2. Colour in the phalange with orange

Colour in the metacarpals in blue

Colour in the tarsals in red

3. Count the number of bones in your hand.

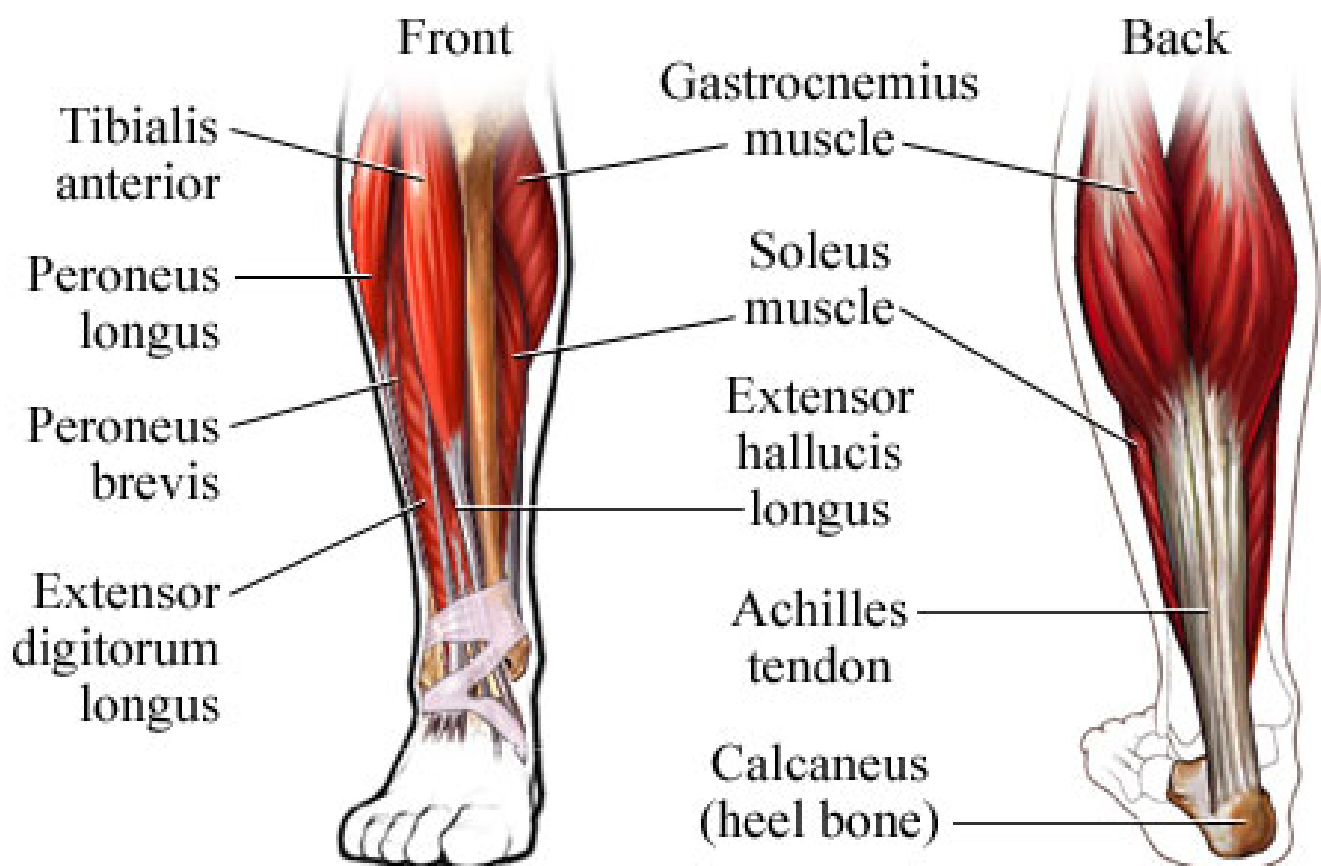

a) How many are there in total?

b) How many phalanges are there?	
c) How many metacarpals are there?	
d) How many tarsals are there?	

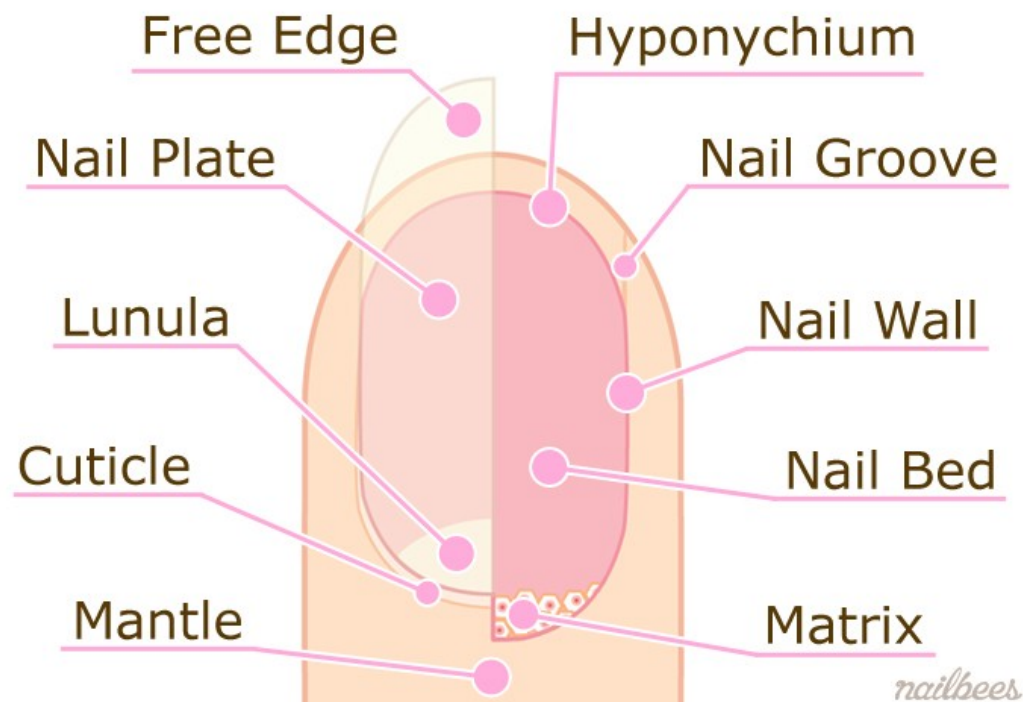

MUSCLES OF THE FEET

The muscles of the foot are responsible for supporting the arches of the feet, curling and flexing the toes and assist with the walking process.

- The **GASTROCNEMIUS** –propels the body in walking and running. Pull foot downwards.
- The **TIBIALIS ANTERIOR** –bends the ankle to pull the foot up to the leg. Pulls foot upwards and turns it inward.
- The **SOLEUS** – steadying function on the lower leg and points the toes. Pulls the foot downwards.

STRUCTURE OF THE NAIL

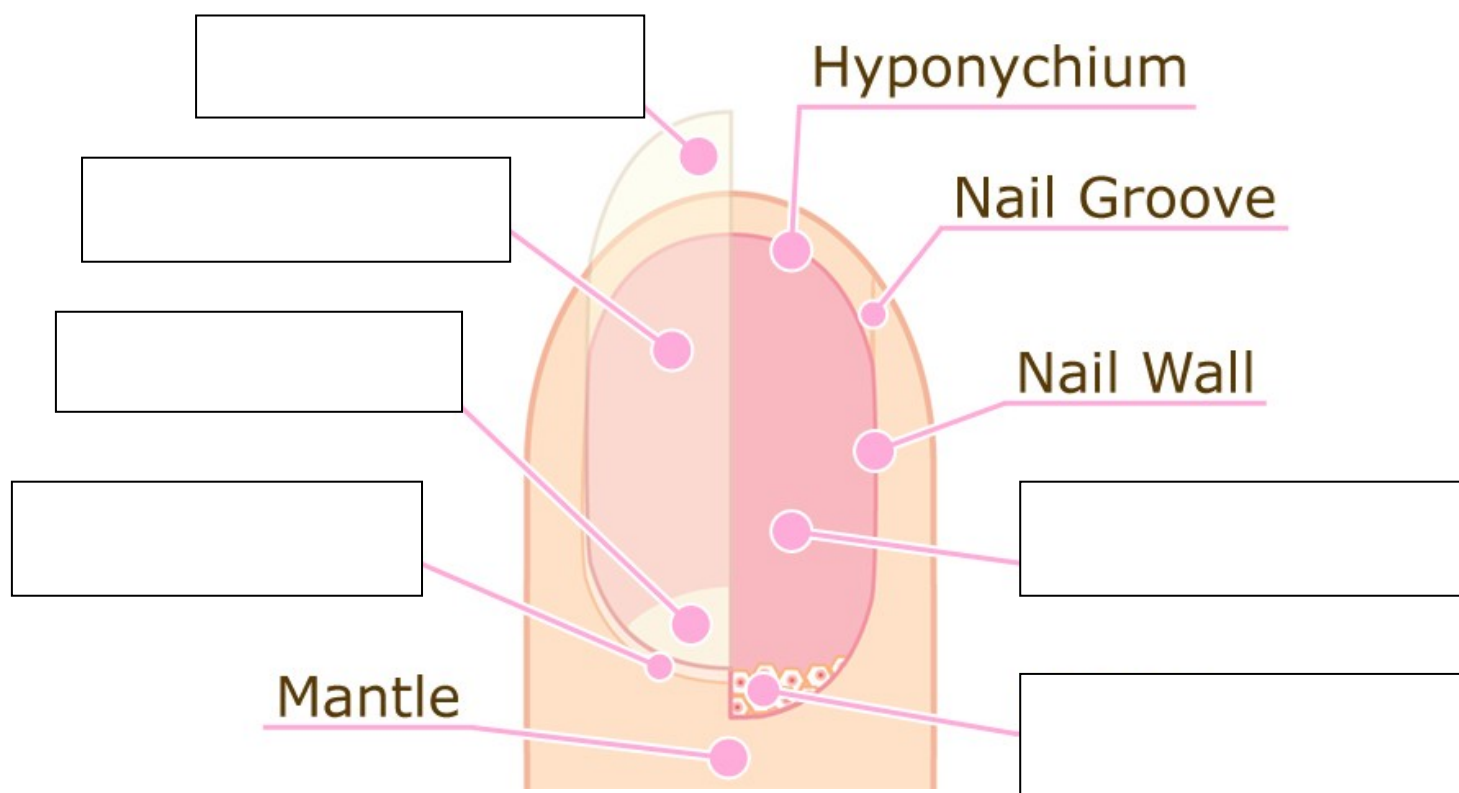

Matrix	This is the only living part of the nail. The matrix is the site of nail reproduction and has a good supply of blood and lymph to keep the cells healthy.
Nail bed	Composed mainly of the dermis layer of the skin. The nail bed is a continuation of the matrix. Blood circulating in the nail bed is responsible for the pinkish colour.
Nail grooves	These are deep ridges underneath the sides of the nail along which the nail moves as it grows. The nail grooves help to direct the nail along the nail bed.
Nail walls	These pads of skin which surround the nail on three sides help to cushion the sides of the nail and protect them from external damage. They also help to keep the nail in place.

Nail plate	This is the main body of the nail. The cells on the nail plate have an overlapping, stacking arrangement, which together with the protein keratin; make the nails hard and strong. The nail plate normally appears pink but may become white or bluish depending on the temperature or other physical conditions.
Cuticle	The cuticle protects the matrix by forming a barrier between the nail and surrounding skin. The cuticle is continually discarding old cells and producing new ones. The cuticle must be kept soft and pliable or else it can split or grow on the nail surface where it becomes unsightly.
Lunula (half-moon)	Also known as the half moon. It is the white moon shaped base of the nails which is generally visible on the thumb and the big toe. The lunula is the only visible part of the matrix.
Free edge	This is the extension of the nail plate which grows over and beyond the fingertip. It does not adhere to the nail bed hence its white colour. The free edge is the hardest part of the nail.

LESSON 12:

Date: _____

1. Label the structure of the nail

2. ANSWER THE FOLLOWING QUESTIONS ON THE STRUCTURE OF THE NAIL

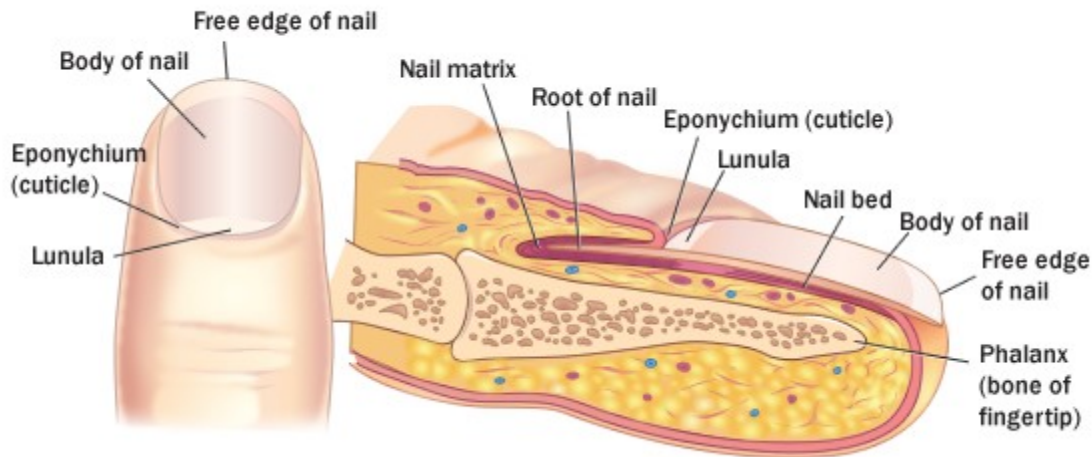

2.1 How are the cells of the nail plate held together?

2.2 What do we call the extension of the nail plate?

2.3 What is visible part of the matrix called?

2.4 What help to direct the nail along the nail bed?

FACTORS THAT AFFECT NAIL GROWTH

FACTORS THAT AFFECT NAIL GROWTH

Some people are lucky enough to get nails that grow quickly and don't seem to break, while others have nails that are weak and seem to take forever to grow.

The average rate of nail growth is between 0.5 and 1.2 mm per week.

Toenails grow much slower than the finger nails.

It takes six months for a fingernail to replace itself and about 12 months for a toe nail.

THE FOLLOWING FACTORS AFFECT NAIL GROWTH

1. **Age** - As you get older nail growth slows.
2. **Gender** – Men's nails tend to grow quicker than women's.
3. **Diet** – A healthy diet will help nails grow quicker and stronger.
4. **Medication** – Some medication can affect nail growth making it faster or slower as well as affecting the nail strength.
5. **Illness** – Illness will slow nail growth due to the body trying to recover and fight the illness.
6. **Pregnancy** – Pregnancy speeds up nail growth due to the hormonal changes.

7. **Circulation** – Poor circulation will slow nail growth as the nail won't be getting the nutrients and oxygen it needs.
8. **Climate** – Nails grow quicker in a hotter environments, this also means that your nails will grow at different rates depending on the time of year.
9. **Chemical** – Chemicals can slow nail growth and cause them to be weaker.
10. **Nail care** – A good nail care routine will help nails grow stronger and longer.

LESSON 13:

DATE: _____

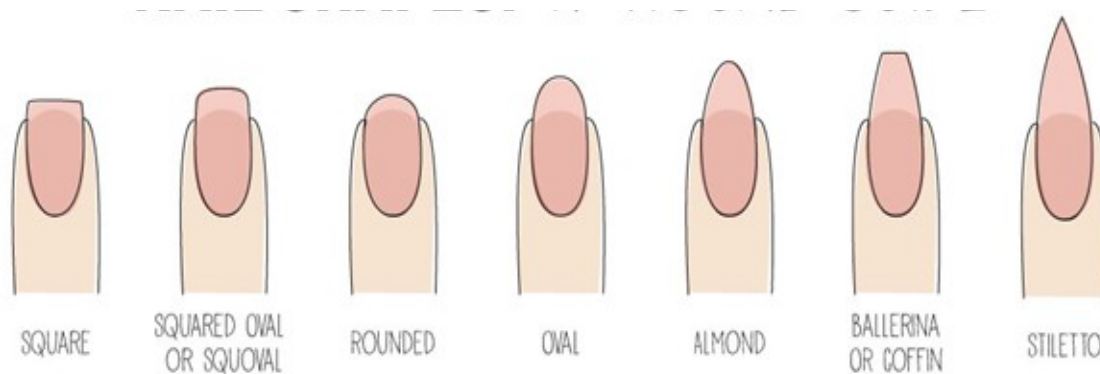

1. Provide ten factors that affect nail growth.

2. How long does it take for a fingernail to replace itself?

3. How long does it take for a toenail to replace itself?

4. What is the average nail growth rate per nail?

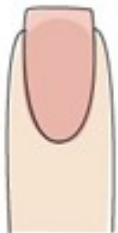

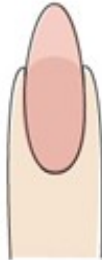

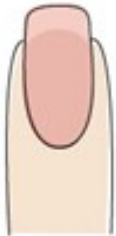

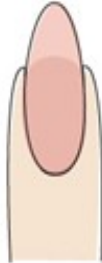

NAIL SHAPES

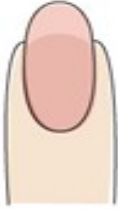

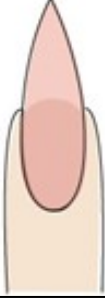

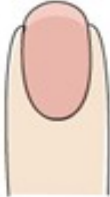

LESSON 17:

DATE: _____

Identify the nail shapes below and label them

 1. _____	 2. _____
 3. _____	 4. _____

 5.	 6.
 	

2. Find pictures of the different nail shapes in the magazines or draw and label them.

COMPLETE THE RECORD KEEPING DOCUMENTS

We live in a society where people are inclined to sue for all sorts of reasons. It is important that you keep written records including dates, the steps you have taken to ensure that the treatment is suitable for your client.

You should record your client's agreement to the treatment plan, details of any test given before the treatment plan (results of patch tests).

- Special advice you have for home care including possible contra – indications.
- Your written records, signed by your client will provide evidence that proper procedures have been followed.

LESSON 14:

DATE: _____

Fill out the record card below, with the details provided below.

Sindy Mahlangu has a 10 o'clock appointment for a manicure.

She was born on the 2nd of February 1999, she stays at 103 Sofa street, Springs 1559 and her telephone number is 073 896 1054.

Her family doctor is doctor Govender his surgery is at unit 20 Palm Springs towers in Springs, the surgery opens until 10 pm and they can be reached on 011 736 5909

The last time she came to your salon was two months ago for a pedicure. She normally uses nail polish and cuticle oil at home.

Sindy Mahlangu takes an oral contraceptive daily and she is allergic to nuts.

Sindy's index finger on her right hand is broken

PREPARING THE CLIENT FOR A MANICURE

The main purpose of a manicure is to improve the appearance and the condition of the hands and nails whilst also providing advice to your client for healthy maintenance.

Manicure treatments usually take 20-30 minutes to perform, depending on the length and the state of the nails.

The more regularly a client comes for manicure treatments the less time will be required to perform the treatment.

Special hand and nail treatments are available which may require additional treatment time; they can be incorporated into the basic manicure.

ASSESSING THE CLIENT FOR TREATMENT

There are some conditions of the skin and the nail which either limit the amount or type of treatment that can be given or **contraindicate** the treatment all together.

Contra-indications are conditions that prevent a manicure or pedicure treatment. Example:

FUNGAL INFECTIONS: these are a type of infections spread very rapidly and often thrive in damp areas and can appear soft and spongy.

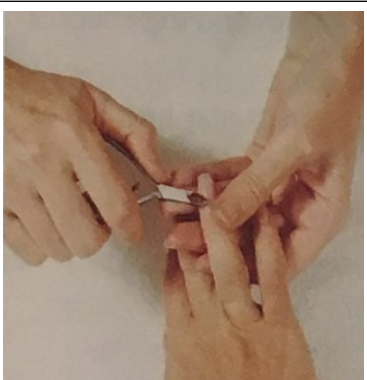

Before performing the manicure treatment, you are required to assess the nails and the skin around the nails of your client.

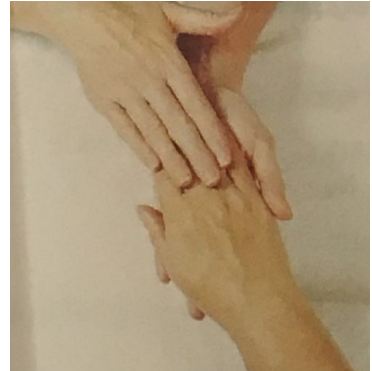

- You must be able to identify signs of normal and abnormal nail growth, provide treatment
- You must be able to recognise signs of infection or disease that require medical referral.
- It is important that the skin and nails are clean so that an accurate assessment can be made.
- The examination should take place in good lighting, preferably under a magnifying lamp. All jewellery should be removed from the area to be assessed.

PRINCIPLES FOR ASSESSING

1. Assess the general condition of the skin, note the colour and the texture. Is the skin soft and smooth or dry and rough? Look for any cracks or breaks in the skin, are there any signs of infection?
2. Look at the skin between the fingers or toes, are there any signs of dryness, soggy or flakiness? Is there skin irritation where rings have been worn?
3. Inspect the cuticles, notice if they are dry and hard or soft and pliable. Are there any splits or hangnails? Are the cuticles excessively thick?
4. Examine the skin around the nails, is the skin intact and are there any signs of infection?
5. Study each of the nails; are they smooth, flexible and slightly pink? Do they look and feel strong or are they all different shapes and size? Are there any splits or breaks.

PRACTICAL PROCEDURE FOR A MANICURE

		
1. Soak the hands in water	2. Scrub the fingernails with a nail brush	3. Use nail polish remover to remove cutex
		
4. Remove nail polish from nail border.	5. Cut and file the nails, do all 10 fingers	6. Apply cuticle remover to all 10 fingers
		
7. Push back the cuticles with a cuticle pusher	8. Cut the cuticles with a cuticle cutter	9. Buff the nails to remove the ridges and lines

		
10. Apply cuticle oil to the nails	11. Rub in the cuticle oil on each finger	12. Massage the hands
		
13. Remove the grease of the nail plates	14. Apply nail polish a) Base coat (one coat) b) Nail polish (two coats) c) Top coat (one coat)	15. Finished effect

PROVIDE RECEPTION AND ADMINISTRATIVE SERVICES

Reception

First impressions count when welcoming salon clients!!

- The client's arrival at reception is a key element of their overall experience. So, it's important to set the scene for the rest of the appointment and ensure clients feel welcome, relaxed and at ease.

Receptionist

The receptionist is one of the salon's most important assets. Here are a few things you must do to make sure you are a professional receptionist of a salon.

1. Display positive body language
 - Stand up to greet clients, smile and make eye contact.
2. Greet all clients warmly
 - Saying "Good morning. How can I help you?" in a clear, warm tone of voice.
 - Don't say the following "Hello. Have you got an appointment?"
3. Welcome clients to the salon
 - There is nothing more welcoming than a receptionist actually saying: "Welcome," it puts a smile on the clients face and puts her at ease. Saying: "Welcome back," to those who are returning for their second visit.
4. Take the clients name
 - Ask the client for her name.
5. Keep the client informed
 - After you've notified the therapist that their client has arrived, let the client know.
Example: say "Kim will be with you shortly." If a delay is likely, let the client know this and the reason why.
6. Be hospitable
 - Help them take off with their coat, offer refreshments and magazines. Simple acts of hospitality will ensure the client feels she is receiving at attentive service.
7. Booking an appointment

- Appointments may be made by telephone or in person.
- When clients make appointments, you will need their names, what treatment they are booking for and their telephone number.
- The receptionist needs the telephone number of a client so they can phone them the day before to ask if they are still coming.
- When making an appointment you need to block out the amount of time needed to do the treatment.
e.g. Mrs Venter for a facial at 08:00 – you need to block off an hour so your next appointment may only be at 09:00 or 09:00.

Basic payments methods

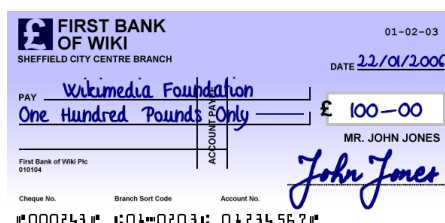

1. Cash payments

- Paying by cash is one of the most common methods of payment for service in a salon.

2. Cheques

- When receiving payment with a cheque it must be supported by a valid cheque guarantee card.

3. Credit cards

- Credit cards are an acceptable method of payment in a salon, if the salon owner has applied to a merchant service to be able to accept payment in that way.

4. Vouchers

- Vouchers can also be used by clients. These vouchers are bought from the salon.

What are important things that needs to be on a gift voucher?

1. It needs have the salons name on
2. It must the salons telephone number
3. It must have the salons address on
4. It must be specified if the gift card is a cash amount or a pre-booked treatment
5. It must say the salon's opening hours – days and times
