1. THE CONSUMER

At the end of this section the learner must be able to:

1.1 Identify him-/herself as part of the economic cycle

1. THE CONSUMER

What is a consumer?

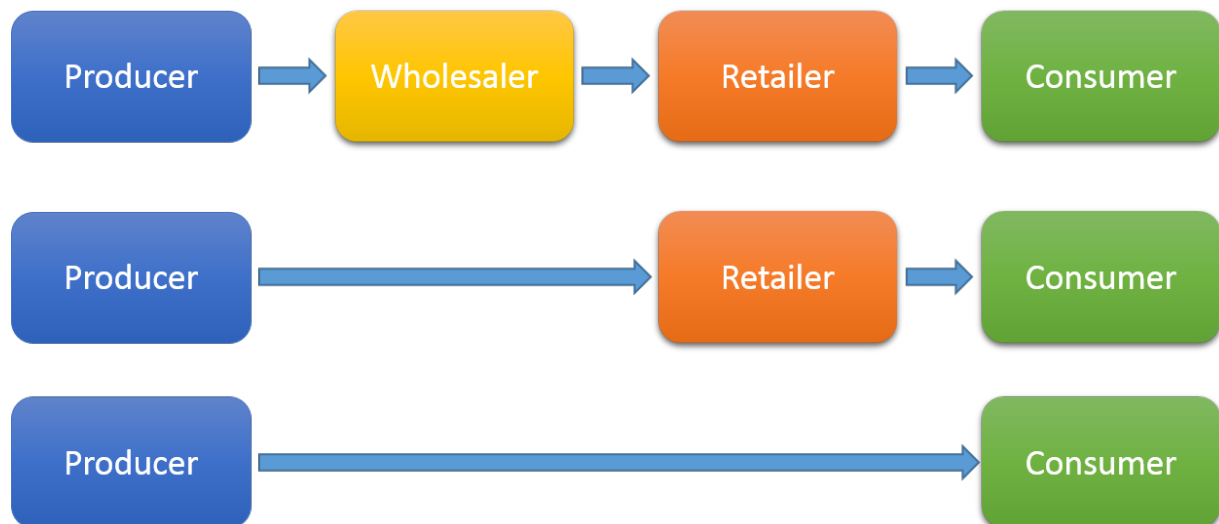

A consumer is a person who buys products or services for personal use.

Every time you buy sweets at the tuck shop, buy a movie ticket or a magazine or you pay a fine at the library, you are a consumer. When you pay the taxi for driving you home, you are also a consumer.

Chain of distribution

Where does the consumer fit in the economic cycle?

Consumer needs and wants

- 🍏 All people have needs as well as things that they want.
- 🍏 The amount of money you have determines whether you can afford the things you want.
- 🍏 To make wise buying decisions, you have to understand the difference between needs and wants.

Needs: Something you can't live without. It is something basic that a person has to have to survive.

Wants: It is a **DESIRE** for something that is not necessary for survival, but that a person would like to have.

Consumer rights

The Bill of Rights is a document that is the foundation of South African society and law. It sets out the basic rights that every person living in the country is entitled to, including the rights that a consumer has when buying products.

The rights of the consumers

✓ THE RIGHT TO SATISFY BASIC NEEDS

Every person has the right to basic food, clothing and shelter.

✓ THE RIGHT TO SAFETY

Consumers have the right to know that the product and services they purchase are safe, and will not endanger their health. If products are found to be unsafe, the manufacturer can be forced to recall them.

✓ THE RIGHT TO INFORMATION

Consumers need information on labels to make wise decisions. Food products must have all ingredients listed on labels.

✓ THE RIGHT TO CHOICE

Consumers must be able to choose from a range of products and services at competitive prices.

✓ THE RIGHT TO REPRESENTATION

Consumers have a right to be involved in government policy decisions that affect their interests.

✓ THE RIGHT TO REDRESS

Consumers have the right to voice their complaints about poor quality, bad service or misleading information.

✓ **THE RIGHT TO CONSUMER EDUCATION**

You have a right to make wise and informed PURCHASING DECISIONS.

✓ **THE RIGHT TO A HEALTHY ENVIROMENT**

People must take care of the environment by not littering and by recycling waste.

2. FOOD AND NUTRITION

At the end of this section the learner must be able to:

- 2.1 Illustrate and label the food pyramid
- 2.2 Demonstrate good hygiene practices
- 2.3 Identify dangers in the kitchen
- 2.4 Understand how the Occupational Health and Safety Act apply to the Food Production industry
- 2.5 Respond to accidents that can happen in the kitchen

General health messages to promote a healthy lifestyle

- 🍏 Enjoy a variety of foods
- 🍏 Be active
- 🍏 Drink lots of clean, safe water

Guidelines for meal planning

- 🍏 Make starchy food the basic of most meals
- 🍏 Eat plenty of vegetables and fruit every day
- 🍏 Eat dry beans, split peas, lentils and soya regularly
- 🍏 Chicken, fish, meat and eggs can be eaten daily

Guidelines that teach us about moderation and balance for healthy eating

- 🍏 Eat fat sparingly
- 🍏 Use salt sparingly
- 🍏 Use food and drinks containing sugar sparingly and not between meals
- 🍏 If you drink alcohol, drink it sensibly

How to enjoy a balanced lifestyle:

- 🍏 Enjoy a variety of foods
- 🍏 Be active
- 🍏 Drink lots of clean, safe water
- 🍏 Make starchy food the basis of most meals
- 🍏 Eat plenty of vegetables and fruit every day
- 🍏 Eat dry beans, split peas, lentils and soya regularly
- 🍏 Chicken, fish, meat, milk and eggs can be eaten daily
- 🍏 Eat fat sparingly
- 🍏 Use salt sparingly
- 🍏 Use food and drinks containing sugar sparingly and not between meals
- 🍏 If you drink alcohol, drink it sensibly

2.1 The Food Pyramid

Food groups

~ **Fats and Oils**

Provides energy and helps to keep the body warm.

Stored as body fat and forms a shield over your organs. It protects cell membranes from damage.

~ **Protein**

Essential for the growth, repair and maintenance of body tissue.

Build and repair the body.

~ **Dairy**

Builds strong bones and teeth.

~ **Vitamins and Minerals**

Keeps the body healthy and boosts the immune system.

Ensures normal growth and development.

~ **Carbohydrates (Carbs) – Starch and Fibre**

Starch provides energy.

Fibre stimulates bowel movement and prevents constipation.

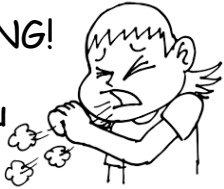

2.2 Good hygiene practices

Personal hygiene

Personal hygiene is habits that every person must repeat every day to keep him/her clean and healthy.

Bacteria lives inside and on your body. It can easily be spread. You should pay great attention to your personal hygiene when handling food.

- ~ Wash your hands regularly. 
- ~ Wash your hands before and after handling food and also after you went to the toilet.
- ~ Use a clean spoon to taste food. **DO NOT USE YOUR FINGER!**
Wash the spoon before you use it again.
- ~ Bacteria grow under your nails. Keep your nails **SHORT, CLEAN** and **NEAT**.
- ~ Do not sneeze or cough over or near food. Cover your nose or mouth with your hand and turn your head away from the food.
WASH YOUR HANDS AFTER SNEEZING OR COUGHING!
- ~ Cover all wounds with **WATERPROOF** plaster before you start working with food. 
- ~ Do not smoke near food.
- ~ Tie long hair back with a band and use a hairnet to cover your hair and to prevent your hair from falling into food.
- ~ Protect your clothes by wearing an apron or chefs' jacket.
- ~ Do not work with food if you are seriously ill or when you have diarrhoea.

How to wash your hands:

- ~ Use WARM water and SOAP.

- ~ Rub your hands together for 20 seconds.

- ~ Rinse your hands using CLEAN water.

- ~ Dry your hands by using a CLEAN, DRY towel or tissue paper.

Kitchen hygiene

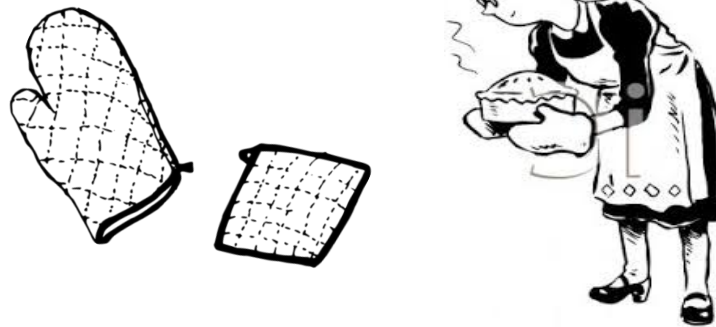

Follow these rules to help you keep your kitchen hygienically clean:

- ~ **Working surface** - Clean before, during and after working with food. Use a 1% bleach solution (5ml bleach for 500ml water) on surfaces to provide added protection against bacteria.
- ~ **Spills** - Wipe or mop up as spills as they occur.
- ~ **Cloths** - Use clean kitchen cloths, dishcloths and towels and change them often. They must never become smelly. Bacteria thrive and multiply on damp, dirty cloths. Bleaching removes stains and kills bacteria. DO NOT USE A DISHCLOTH TO CLEAN A FLOOR.
- ~ **Utensils** - Work with clean cooking utensils and equipment.
- ~ **Washing up** - Use warm soapy water for washing up and cleaning working surfaces; change the water often. Rinse dishes in clean, hot water and dry the dishes by using a CLEAN towel before you put them away.
- ~ **Pets** - Do not allow pets on kitchen work surfaces.
- ~ **Cleaning agents** - Keep cleaning agents away from food, beverages and children.
- ~ **Pests** - Keep the kitchen free of pests such as ants, flies and cockroaches.
- ~ **Refrigerator and freezer** - Clean regularly.
- ~ **Food storage** - Food must be stored in clean, dry containers.

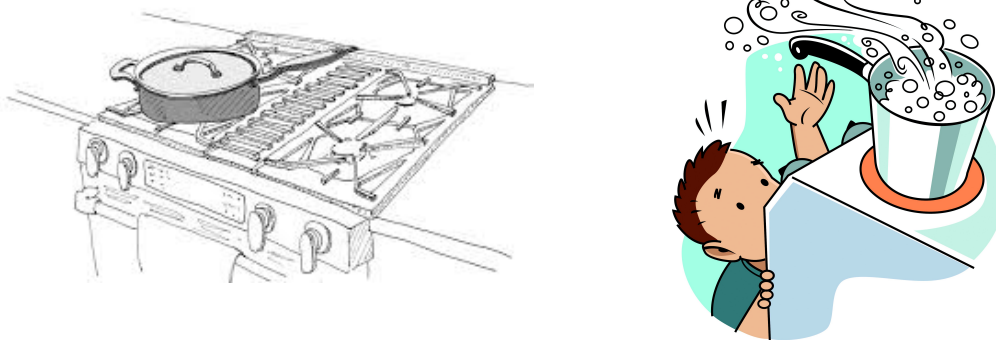

- ~ **Waste bins** – Kitchen waste bins must have a lid. Empty bins at the end of the day or as soon as they are full. Wash bins using WARM water and bleach solution.

2.3 Dangers in the kitchen

- ~ Everything that is cooked on the stove or in the oven is hot and you can burn yourself. Use gloves to handle casseroles, oven dishes and baking trays.

- ~ Turn the handles of the pots away from the side of the stove so you don't knock it off.

- ~ Stir hot mixtures on the stove with a wooden spoon so the handle won't burn your hand.

- ~ Sharp knives is dangerous. Cut away from yourself and keep your fingers out of the way. Always cut food on a chopping board.

- ~ Be careful when grating cheese, carrots or anything else; do not let your fingers touch the teeth of the grater.

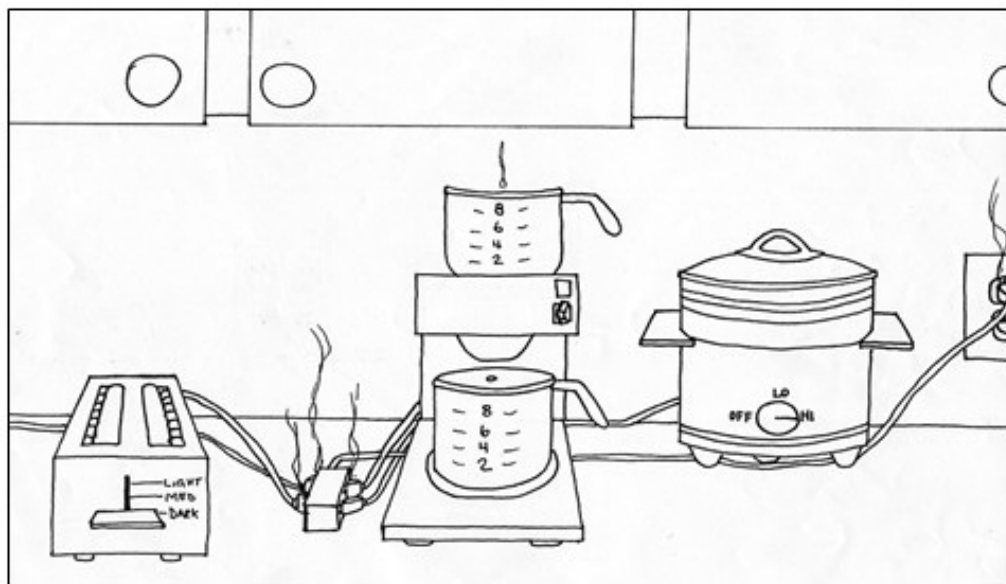

- ~ Food that falls on the floor can cause you to slip and fall if you spilled something; clean it up immediately with a damp cloth or paper towel.

- ~ Loose carpets are not allowed in the kitchen for decoration. You can easily slip and fall.

- ~ Be careful when you are working with electricity. Make sure your hands are dry. Never put too much plugs in the wall plug.
- ~ Make sure all the leads of the electrical equipment are 100% in working order, so they don't make a short, it can cause a fire.

~ All the chairs, tables and stepladders that are used in the kitchen should have rubber legs.

2.4 Occupational Health and Safety Act

Just like any other industry, the hospitality industry has rules and regulations to adhere to regarding safety and health issues.

The Occupational Health and Safety Act, 1993, requires the employer to bring about and maintain, as far as reasonably practicable, a work environment that is safe and without risk to the health of the workers. This means that **the employer must ensure that the workplace is free of hazardous substances, equipment, processes, etc. that may cause injury, damage or disease.**

Where this is not possible, the employer must inform workers of these dangers, how they may be prevented, and how to work safely, and provide other protective measures for a safe workplace.

However, it is not expected of the employer to take sole responsibility for health and safety. The Act is based on the principle that dangers in the workplace must be addressed by communication and cooperation between the workers and the employer. The workers and the employer must share the responsibility for health and safety in the workplace. Both parties must pro-actively identify dangers and develop control measures to make the workplace safe.

In this way, the employer and the workers are involved in a system where health and safety representatives may inspect the workplace regularly and then report to a health and safety committee, who in turn may submit recommendations to the employer. To ensure that

this system works, every worker must know his or her rights and duties as contained in the Act.

The employer must:

- identify potential hazards which may be present while work is being done, something is being produced, processed, used, stored or transported, and any equipment is being used,
- establish the precautionary measures that are necessary to protect his or her workers against the identified hazards and provide the means to implement these precautionary measures,
- provide the necessary information, instructions, training and supervision while keeping the extent of workers' competence in mind. In other words, what they may do and may not do,
- not permit anyone to carry on with any task unless the necessary precautionary measures have been taken,
- take steps to ensure that every person under his or her control complies with the requirements of the Act,
- enforce the necessary control measures in the interest of health and safety,
- see to it that the work being done and the equipment used, is under the general supervision of a worker who has been trained to understand the hazards associated with the work,
- such a worker must ensure that the precautionary measures are implemented and maintained.

It is the duty of the worker to:

- take care of his or her own health and safety, as well as that of other persons who may be affected by his or her actions or negligence to act. This includes playing at work. Many people have been injured and even killed owing to horseplay in the workplace, and that is considered a serious contravention,
- where the Act imposes a duty or requirements on the worker to cooperate with the employer,
- give information to an inspector from the Department of Labour if he or she should require it,
- carry out any lawful instruction which the employer or authorised person prescribes with regard to health and safety,
- comply with the rules and procedures that the employer gives him/her,
- wear the prescribed safety clothing or use the prescribed safety equipment where it is required,
- report unsafe or unhealthy conditions to the employer or health and safety representative as soon as possible,
- if he or she is involved in an incident that may influence his or her health or cause an injury, report that incident to the employer, and authorised person or the health and safety representative as soon as possible, but no later than by the end of the shift.

2.5 First aid in the kitchen

It is **IMPORTANT** to always wear gloves when you apply first aid.

Bleeding

It is important to stop bleeding as quickly as possible!

Small cuts

Small cuts in the veins will stop bleeding and clot within a few minutes. The area should then be sanitised and a plaster placed gently on top.

Deeper cuts

Deeper cuts in the veins produce dark blood that seeps out slowly and steadily. It can be stopped by putting gentle pressure on the wound with a sterile or clean cloth, followed by the application of a sterile bandage. Often, these wounds need sewing, so medical treatment will be necessary after first aid.

Nosebleeds

Nosebleeds occur when one of the small blood vessels inside of the nose bursts. Blood may also run into the stomach and hence be vomited up.

Do not bend the head backwards or lie down, because this increases blood pressure in the head and so increases bleeding.

- ✓ Pinch the nostrils shut with the index and middle finger for 10 minutes. This way, the vein is compressed, which is often enough to stem the flow.
- ✓ While the nostrils are shut, the person must breathe through their mouth.
- ✓ If the bleeding continues, it is important to contact a medical doctor.

Chocking

Chocking happens when the passage through the windpipe is blocked. This usually happens when food that hasn't been thoroughly chewed gets stuck.

What to do when someone is choking:

- ✓ Ask them if they are able to talk.
- ✓ Stand behind them and lean their head slightly forward.
- ✓ Use a flat palm, strike them forcefully between the shoulder blades, in the hope they will cough up the item causing choking. Repeat up to five times.

Heimlich Maneuver:

- ✓ Stand behind the person who is choking.
- ✓ Place your arms around their waist, and bend them well forward.
- ✓ Clench your fist, and place it right above the person's navel (belly button).
- ✓ Place your other hand on top of your fist.
- ✓ Thrust both hands backwards into the stomach with a hard, upward movement.
- ✓ Repeat this until the object stuck in the throat is expelled through their mouth.

Burning wounds

- ✓ Place the burned area under running cool water for at least 5 minutes to reduce swelling.
- ✓ Apply an antiseptic spray, antibiotic ointment, or aloe vera cream to soothe the area.
- ✓ Loosely wrap a gauze bandage around the burn.
- ✓ To relieve pain, take acetaminophen, ibuprofen, or naproxen.

3. FOOD PRODUCTION

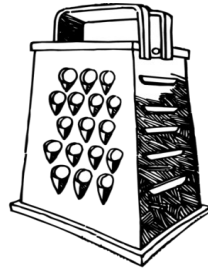

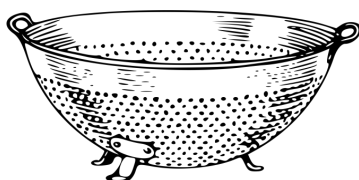

At the end of this section the learner must be able to:

- 3.1 Identify basic kitchen equipment and utensils and name their uses
- 3.2 Identify different measuring equipment and know their sizes

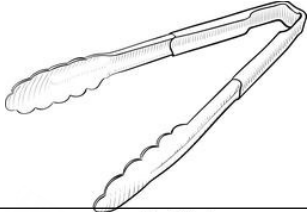

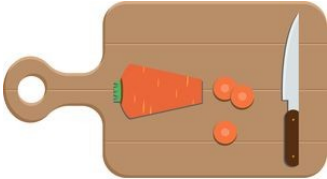

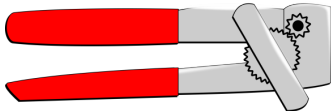

- 3.3 Demonstrate basic measuring skills
- 3.4 Read and interpret a basic recipe
- 3.5 Understand basic recipe terminology
- 3.6 Demonstrate different mixing methods
- 3.7 Understand the meaning of each cooking method

3.1 Kitchen equipment and utensils

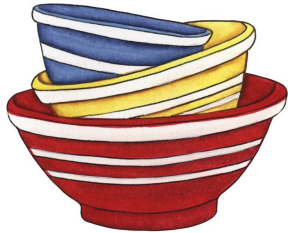

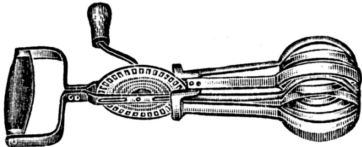

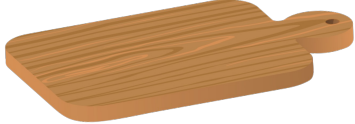

Diverse equipment

Grater	To grate all kinds of food	
Colander	For rinsing and draining of food	

Strainer	For draining vegetables and sauces	
----------	------------------------------------	---

Pastry Brush	Glazing / brushing food with milk, egg or sauce	
Tongs	Handling of food during the cooking process	
Balloon whisk	Blending foods Beating and whisking eggs, batters cream and sauces	
Chopping / cutting boards	To cut and prepare food	
Tin opener	Opening cans	
Potato Masher	Mashing soft, cooked vegetables	

Mixing utensils and equipment

Mixing bowls	To mix cake mixtures	
Egg beater	To whisk eggs and other liquid mixes	
Wooden spoon	To stir mixtures	
Sieve	To sieve dry ingredients	
Rolling pin	To roll out dough	
Pastry board	To roll out dough	
Dough Cutter	To cut margarine into flour	
Dough scraper	Scraping batter out of a mixing bowl	
Spatula	Folding egg white into a mixture	

	Flipping pancakes and crumpets	
--	--------------------------------	--

Baking utensils and equipment

Baking sheet / tray	Baking pizza, scones, biscuits and vegetables	
Cake and Bread tins	Baking a variety of products	
Muffin tins	Baking muffins or cupcakes	
Cooling rack	Cooling baked product after removing from the oven	

Cooking utensils and equipment

Pots	Cooking food Making sauces	
Double cooker	Steaming food	

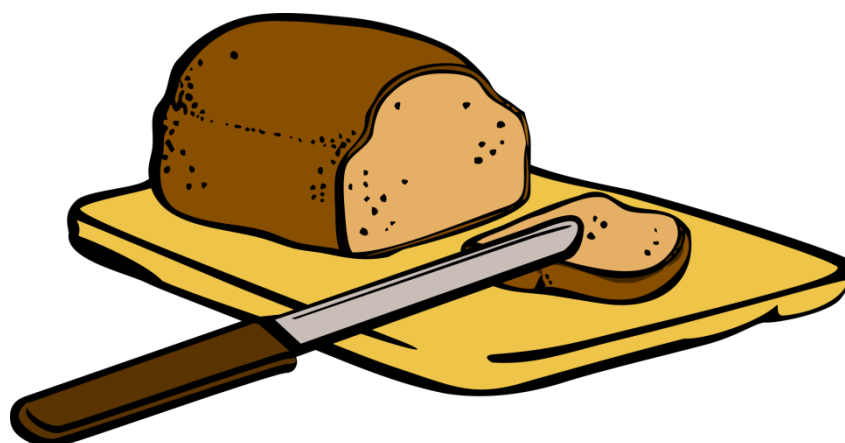

Electrical equipment

Kettle	Boiling water	
Bread toaster	Toasting bread	
Electric mixer	Mixing eggs and other liquids 	

Cutting Equipment

Vegetable knife	Peeling and cutting vegetables and fruit	
Vegetable Peeler	Peeling vegetables	 
Chef's knife	Cutting Meat	
Chopping / cutting knife	Chopping herbs (parsley)	
Bread knife	Cutting Bread	

Identification, use and cleaning of a stove, refrigerator and freezer

STOVE	FRIDGE (refrigerator)	FREEZER
		
Used to cook food on the plates and in the oven.	Used for the storage of perishable food between 2 - 5 °C.	Used for the storage of frozen food at -18°C.

Cleaning of a stove

1. Switch off the stove before cleaning.
2. Wipe up spilt food immediately.
3. Clean with a soapy cloth, then wipe away any soap and dry.
4. Use oven cleaner to remove tough stains.

Cleaning of a fridge (refrigerator)

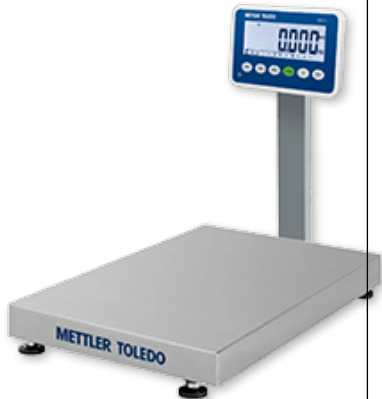

1. Immediately wipe up spilt food.
2. Remove shelves and wash when necessary.
3. Remove food, switch off and defrost.
4. Clean with a soapy cloth.
5. Wipe away any soap and dry with a clean, dry cloth.

Cleaning a freezer

1. Wipe up spilt food immediately.
2. Clean thoroughly every couple of months or when necessary.
3. Remove food, switch off and leave to defrost.
4. Wipe clean with a soapy cloth.
5. Wipe away any soap and dry with a clean, dry cloth.
6. Do not use sharp objects to remove ice or food that is stuck.

3.2 Measuring equipment

A pinch of salt	The amount of salt you can pins between two fingers	
Measuring jug	Measuring large quantities of liquid Large quantities, more than 50ml are measured with a measuring jug	
Measuring spoons	Measuring small quantities like salt 12.5ml, 5ml, 2ml, 1ml	

Measuring cups	Measuring large quantities of dry ingredients and small amounts of liquid 250ml, 100ml, 50ml, 25ml	
Mass meter	Measuring large quantities in kilograms (kg)	
Kitchen scale	Measuring small quantities in grams (g)	

3.3 Measuring skills

Why do we sieve dry ingredients?

1. To remove lumps.
2. To allow air in.

3. To remove impurities.
4. To mix ingredients.

How do I measure dry ingredients?

1. Dry ingredients are measured in gram (g) or kilogram (kg).
2. Fill measuring cup with flour, using a clean, dry spoon. **DO NOT PRESS DOWN!**
3. Scrape it level on top, using a spatula.

How do I measure fluids?

1. Liquids or fluids are measured in millilitre (ml) or litre (l).
2. Put the measuring jug on a level surface.
3. Pour the liquid into the measuring jug. Bend down, so that your eyes are level with the jug. This way you will be able to measure the correct amount of liquid needed.

3.4 Read and interpret a basic recipe

Reading a recipe and following recipe instructions:

1. Read the recipe very carefully BEFORE you start to make the dish.
 - ✓ Make sure you have all the utensils, equipment and ingredients needed.
 - ✓ Make sure you understand the recipe terminology, the method of the recipe and that you have the skills to make the dish.
 - ✓ Make sure you understand the method of the recipe.
2. Measure all the ingredients accurately.
3. Follow the method of preparation carefully and make sure you follow EVERY step.

4. Use the correct equipment.
5. Use the correct cooking temperatures.

Recipe Instructions

A recipe consists of two parts:

- Equipment and Ingredients - WHAT IS NEEDED?
- Method - WHAT TO DO?

1. Carefully read through the recipe before you take out any ingredients or utensils.
2. Switch the oven to the correct temperature.
3. Take out all the needed ingredients and equipment.
4. Follow the recipe step by step.
5. Use the correct measuring equipment and measuring techniques.
6. NOTE the time you put the dish in the oven, so that you will take it out on time and not overcook your dish.

Scones	
Ingredients	
750ml (3 cups) cake flour Pinch of salt 30ml (2 Tablespoons) baking powder 85ml (1/3 cup) Illovo White Sugar 2 eggs 60ml (4 Tablespoons) oil Approximately 250ml (1 cup) milk Beaten egg to glaze	
Method	
1. Sift the dry ingredients into a bowl. 2. Beat the eggs and oil in a measuring jug. Add enough milk to make up	

3.5 Recipe terminology

Chop	Chopping means to cut food into (more or less) bite-sized pieces using the quick, heavy blows of a knife. If a recipe calls for something to be finely chopped , the pieces should be smaller than bite sized, and if it calls for roughly chopped , they should be slightly bigger
Grease	Butter and shortening are the 2 most common fats used to grease baking pans . Butter will impart a slight richness to the batter and will help the exterior bake to a golden

	brown. Shortening is flavourless and the batter is less likely to brown. Oil based sprays and vegetable oil should not be used to grease the pan
--	--

Grate	If you grate food such as cheese or carrots, you rub it over a metal tool called a grater so that the food is cut into very small pieces
Melt	To become liquefied by warmth or heat, as butter
Peel	To remove the outer layer from something. Peel something away/off/back. Peel away the waxed paper from the bottom of the cake
Slice	To cut a thin, flat piece from something like a slice of bread
Sprinkle	To sprinkle means to fling about small drops or particles. Example icing-sugar over the cake

Decorate / Garnish	A garnish is an item used as an additional decoration with prepared food
--------------------	--

Glaze	A glaze in cooking is a coating of a glossy, often sweet, sometimes savoury, substance applied to food typically by dipping, dripping, or with a brush. Egg whites and basic icings are both used as glazes . They often incorporate butter, sugar, milk, and certain oils
-------	---

→ Glazing a cake

3.6 Mixing methods

Beat	Beating is vigorous stirring with a wooden spoon, balloon whisk or electric beater. Ingredients are beaten to introduce air, to break them up or to mix them thoroughly
Cream	Creaming involves beating together butter or margarine and sugar to give a fluffy mixture. This mixing method is used for some baked products such as cupcakes. A wooden spoon or electric beater can be used
Rub in	This is a mixing method used to incorporate margarine or butter into flour for pastry or

	scones. The margarine is cut into small pieces and rubbed into the flour by hand until the mixture looks like fine breadcrumbs
--	--

Stir	Stirring involves mixing ingredient by moving them around with a wooden spoon. Ingredients are stirred to make sure that they are thoroughly mixed. Food is often stirred during the cooking process to prevent it from sticking to the saucepan and burning
Whisking	Whisking means beating ingredients lightly with a fork or balloon whisk. This usually done to get rid of lumps
Knead	Compressing dough with both hands to mix it evenly. Dough for bread or rusks
Fold in	Carefully turning a mixture (all the time in the same way) in a mixing bowl using a metal

	spoon, scraper or spatula. The spoon should touch the bottom of the bowl every time. The air in the mixture must not escape. "Cut" through the mixture
--	--

Fast mixing method

1. **BEAT** all the liquids like eggs and milk together.
2. **SIEVE** all the dry ingredients together like flour, salt or baking powder.
3. **MIX** all the ingredients together.

Flour mixtures

Flour mixtures are divided into two groups: **DOUGH** and **BATTER**.

DOUGH - Little liquid and more flour.

- Can handle it with your hands.

BATTER - More liquid and less flour.

- Can't handle it with your hands, it is too runny.

<u>BATTER</u>	<u>DOUGH</u>
Thin - Pancakes	Soft - Scones or bread
Medium - Flapjacks or Waffles	Stiff - Small cookies
Dripping - Cakes or muffins.	

→ Batter

→ Dough

3.7 Cooking methods

Moist-heat cooking methods	
Food is cooked in water, steam, stock, milk, fruit juice, wine o	
Boiling	Food is cooked in water or stock at boiling point (100°C). Potatoes, pasta, rice, eggs, soup and sauces
Simmering	Food is cooked just beneath boiling point at (85 - 95°C). Vegetables, meat, fish and soup
Steam	The heat from the steam of boiling water cooks the food. Steamed food is light and easy to digest. They retain a lot of their flavour and nutrients. It is much healthier
Direct steaming	Food is steamed in a colander over a saucepan with boiling water; the steam comes into direct contact with the food through the holes of the colander
Indirect steaming	For example, when chocolate is

	melted in a double boiler, the steam does not come into direct contact with the chocolate, but heats the chocolate indirectly
Stewing	Usually in a pressure cooker. Fruit, tough meat, etc.
Poaching	Poaching is a type of moist-heat cooking technique that involves cooking by submerging food in a liquid, such as water, milk, stock or wine

→ Boiling

Dry-heat cooking methods

Food is in direct contact with heat. No water is used. Food is

cooked in margarine, oil, butter or baking fat.	
Frying	Food is cooked in a frying pan or saucepan in hot shortening, which can be fat, oil, margarine or butter. Frying is popular because the cooking time is short and food is given colour and flavour. Frying adds fat to food
Baking	Food is cooked in the oven, usually at a temperature between 160°C and 220°C. It is important to remember to pre-heat the oven and to control the baking time carefully. Food should be baked in the middle of the oven, as that is where the temperature is most even. Baking is suitable for making bread, cakes, scones, muffins, biscuits, pastries, puddings and lasagne
Oven roasting	When meat, fish, poultry and

	vegetables are baked, the process is usually called OVEN ROASTING. The same methods you use for baking should be used for oven roasting
Deep-frying	The food is completely immersed in oil in a deep saucepan and cooks very quickly. Deep-frying is used for food such as potato chips. "Slap chips"
Shallow-frying	Just enough shortening to cover the bottom of the frying pan and to prevent the food from burning or sticking is added. Suitable for pancakes, crumpets, eggs, onions, etc.
Dry-frying	Foods that contain a lot of fat, like bacon, can be cooked in their own fat. No extra fat is added. Use a non-stick pan
Roast	Usually on a grid. Meat, wors, toast, etc.

Sauté	This is a cooking method in which food is fried in a little oil, margarine, butter or fat until lightly brown. This is usually used for onions and other vegetables like mushrooms. Stir-fry is also cooked this way
-------	---

→ Mushroom
sauté

FOOD PRODUCTION

At the end of this section the learner must be able to:

- 4.1 Prepare two different kinds of pancakes applying the skills below:
 - 4.1.1 Identify the equipment and utensils used to prepare pancakes
 - 4.1.2 Demonstrate the correct measuring skills

- 4.1.3 Read and interpret the recipe
- 4.1.4 Demonstrate basic preparation techniques
- 4.1.5 Demonstrate the correct mixing methods to prepare batter
- 4.1.6 Demonstrate a dry heat cooking method, frying pancakes
- 4.1.7 Decorate/garnish his/her pancakes
- 4.2 Demonstrate good hygiene and safety practices during the practical lesson

Characteristics of successful pancakes
✓ Thin, flat and round
✓ Golden-brown
✓ Speckles on one side
✓ Soft and airy
✓ Not doughy

PANCAKES (10 Pancakes)

Ingredients			
250 ml	Cake flour	5 ml	Vinegar or lemon juice
5 ml	Baking powder	125 ml	Milk
1 ml	Salt	250 ml	Water

1	Egg	Oil for shallow frying
15 ml	Cooking oil	

Method

1. Sieve the flour, baking powder and salt together.
2. Beat the egg, add the milk, water and oil and beat slightly until mixed.
3. Make a well in the dry ingredients and add the egg mixture. Mix
4. Until smooth. (use electric beater if available)
5. Pour the mixture into a jug.
6. Heat a heavy frying pan with just enough oil to cover the bottom of the pan. Allow the pan to heat up well.
7. Pour in sufficient batter to barely cover the bottom of the frying pan.
8. Shake the pan to loosen the pancake as soon as it become slightly dry round the edges.
9. Turn over with an egg lifter or spatula. Allow the other side to brown.

5. FOOD PRODUCTION

At the end of this section the learner must be able to:

- 5.1 Prepare two different types of crumpets, applying the skills below:
 - 5.1.1 Identify the equipment and utensils used to prepare crumpets
 - 5.1.2 Demonstrate the correct measuring skills
 - 5.1.3 Read and interpret the recipe
 - 5.1.4 Demonstrate basic preparation techniques
 - 5.1.5 Demonstrate the correct mixing methods to prepare batter
 - 5.1.6 Demonstrate a dry heat cooking method, shallow frying crumpets
 - 5.1.7 Decorate/garnish his/her crumpets
- 5.2 Demonstrate good hygiene and safety practices during the practical lesson

Characteristics of successful crumpets
✓ Flat and round shape with neat edges
✓ Even golden-brown colour
✓ Delicate, fine, light and tender texture with fine, even holes
✓ Delicate flavour
✓ Not greasy

CRUMPETS (Flap-jacks)

Ingredients			
250 ml	Cake flour	15 ml	Cooking oil
10 ml	Baking powder	100 ml	Milk
1 ml	Salt	75 ml	Water
15 ml	Sugar	Oil for shallow frying	
1	Egg		

Method

1. Sieve the flour, baking powder and salt together.
2. Add the sugar.
3. Beat the egg, add the milk, water and oil and beat slightly until mixed.
4. Add the dry ingredients slowly to the egg mixture and mix until smooth.
5. The batter should be the consistency of thick cream.

6. Heat a frying pan with just enough oil to cover the bottom of the pan.
7. Drop spoonful onto the hot frying pan. Fry 3 - 4 crumpets at a time. They should all be the same size.
8. Turn over with an egg lifter or spatula as soon as bubbles pop on the surface. Allow the other side to brown.

6. FOOD PRODUCTION

At the end of this section the learner must be able to:

- 6.1 Prepare four different types of muffins, applying the skills below:
 - 6.1.1 Identify the equipment and utensils used to prepare muffins
 - 6.1.2 Demonstrate the correct measuring skills
 - 6.1.3 Read and interpret the recipe
 - 6.1.4 Demonstrate basic preparation techniques
 - 6.1.5 Demonstrate the correct mixing methods to prepare batter
 - 6.1.6 Demonstrate a dry heat cooking method, baking muffins
 - 6.1.7 Decorate/garnish his/her muffins
- 6.2 Demonstrate good hygiene and safety practices during the practical lesson

Characteristics of successful muffins

✓ Light
✓ Fluffy
✓ Moist
✓ Good volume
✓ Slightly rounded, golden brown pebbly top

BANANA MUFFINS

Ingredients			
250 ml	Cake flour	$\frac{1}{2}$	an Egg (25 ml)
10 ml	Baking powder	125 ml	Milk
1 ml	Salt	25 ml	Cooking oil
15 ml	Sugar	1	Banana, mashed

Method

1. Sieve the dry ingredients together.
2. Beat the egg and milk together and also add the oil.
3. Add the egg and milk mixture together with the squashed banana to the dry ingredients and mix just until moist, but still lumpy.
Don't mix it too much!
4. Scoop two thirds full into a greased muffin pan.
5. Bake 15 to 20 minutes in a hot oven (220°C).

7. ENTREPRENEURSHIP

At the end of this section the learner must be able to:

- 7.1 Understand what an entrepreneur is
- 7.2 Produce, package and sell quality muffins / scones

7.1 What is an entrepreneur?

Definition: Entrepreneurs are people who choose to start their own business. In time, they may grow their business so that they have to employ other people, thereby reducing unemployment in our country.

An entrepreneur sees an opportunity, makes a plan to turn it into a business, risks money and receives profit as a reward.

Reasons why people become entrepreneurs:

- ✓ No other form of income - retrenched
- ✓ To be their own boss and make their own decisions about their life
- ✓ To have a more flexible lifestyle
- ✓ To have more control over the amount of money they can earn
- ✓ To be rewarded for their hard work

Advantages and disadvantages of being an Entrepreneur:**ADVANTAGES**

- ✓ Better job satisfaction, because you reap the rewards for yourself
- ✓ Independence and not being answerable to someone else for the work that you do
- ✓ Flexible hours and being able to work as long as you want to
- ✓ If the business is successful, you will earn more as if you were working for someone else

DISADVANTAGES

- ✓ No security of your regular salary
- ✓ You may earn much until the business is running successfully
- ✓ All the decisions must be made by you as there is no one in a more senior position to rely on

- | |
|---|
| ✓ You will not see the benefits of entrepreneurship in the beginning |
| ✓ You have to deal with staff. Some staff may not have the same interests in the business as you - personalities differ |

Qualities of a successful entrepreneur:
--

- | |
|-----------------------|
| ✓ Responsible |
| ✓ Risk taker |
| ✓ Persevering |
| ✓ Enthusiastic leader |
| ✓ Organised |
| ✓ Confident |
| ✓ Determined |
| ✓ Creative |
| ✓ Committed |
| ✓ Efficient |
| ✓ Self-Motivated |

Self-Discipline

7.2 Production, packing and selling

Planning

You do not need an office. A desk or small table with a drawer or box for your paperwork and records as well as a telephone will do. The planning area is the key area or most important

area of your business. It is the place where you will decide what to make. You will use it to compile your shipping lists, time schedules and order of work. You will also use it when communicating with clients and suppliers as well as when organising deliveries.

Production

Whether you are making specialised individual products (birthday cake) or whether you are making products on a larger scale (baking batches of biscuits), you must plan your workstations so that the different stages or steps of the production process flow efficiently from start to finish.

Here are some **guidelines** to consider:

1. Ensure adequate lighting and good ventilation. Good ventilation is essential where food is produced.
2. Make sure the workstations are close enough to each other.
3. All floor surfaces should be non-slip.
4. Surfaces should be easy to clean.
5. There must be efficient storage for ingredients, materials and equipment.
6. Provide adequate cleaning areas.
7. Make sure that there are sufficient work surfaces at each workstation.
8. Each workstation should have the correct equipment.

Controlling and evaluation

To make sure that your products consistently remain at the same standard of quality, you must control and evaluate the product and the process at different stages during production.

Decide on the critical control points where evaluation must take place and changes can be made if necessary.

Control points should be used for

Checking the following aspects:

1. Input specifications (correct ingredients) are adhered to.
2. There is enough time to complete the task without rushing.
3. Different stages or tasks have been completed correctly.
4. The workstations are neat and tidy.
5. Standards of hygiene are adhered to.
6. Electrical- and other equipment are safe to use.
7. Workers have the required skills and knowledge for the task.
8. The end product is inspected thoroughly for quality.
9. Packaging and labelling are correct.

Packaging

Provide for a station where you can pack and store your product prior to delivery. The type of packaging you choose will depend on your product and its size.

<u>Three main functions of packaging:</u>
1. To protect the product.
2. To contain the product.
3. To identify the product.

Make sure that you **consider the following points:**

1. You will need a surface where you can package the end products hygienically and safely.
2. Use packaging materials that can be recycled such as paper, card and plastic.
3. Think about the shape and size of the product, and the container it will fit into.
4. Remember that packaging material for food products must be hygienic.
5. Choose packaging material that is strong enough for the purpose.

6. Packaging made from see-through materials allows consumers to see what they are buying.
7. Labelling should provide the necessary information and contact details as well as being attractive.

Selling

What makes up the cost of a product?

Every single thing you pay for to get the product finishes must be added up in order to work out the **unit price** of the product.

The **unit price** means the total cost of the materials for one product.

The unit of measurement must be included in your list, for example, 25g baking powder. The initial capital as well as part of the profit will be used to pay for equipment that your business needs. The equipment is not included in the cost of the product as it is an asset of the business.

Calculating the cost price

1. List the materials and the quantities used to make the product.
2. Write down the quantity of the materials you bought and the cost of these materials.
3. Calculate as follow:
Multiply the quantity by the price per gram, litre, meter or other unit of measurement. This will give you the actual cost of the quantity you use in the recipe.
4. Add up all the cost. This will be the total cost for one article.

5. If you used certain materials to make more than one article, you need to divide the total cost by the number of articles to get the unit price for one article.

Determine the market

Who is going to buy your product?

Do research in who will be interested in buying your product and meet your market's needs and wants.

8. FOOD PRODUCTION

At the end of this section the learner must be able to:

- 8.1 Prepare four different types of dishes using scone dough, applying the skills below:
- 8.1.1 Identify the equipment and utensils used to prepare scones
 - 8.1.2 Demonstrate the correct measuring skills
 - 8.1.3 Read and interpret the recipe
 - 8.1.4 Demonstrate basic preparation techniques
 - 8.1.5 Demonstrate the correct mixing methods to prepare the dough
 - 8.1.6 Demonstrate a dry heat cooking method, baking scones
 - 8.1.7 Decorate/garnish his/her scones
- 8.2 Demonstrate good hygiene and safety practices during the practical lesson

Characteristics of successful scones	
✓	Light and airy
✓	Moist
✓	Rich golden crust
✓	Good crumb
✓	Straight sides

CHEESE SCONES

Ingredients			
250 ml	Cake flour	30 ml	Cold margarine
10 ml	Baking powder	100 ml	Cheddar cheese, grated

1 ml	Salt	1	Egg
2 ml	Mustard powder	40 ml	Milk
1 ml	Cayenne pepper		

Method

1. Preheat the oven to 220°C and grease a baking sheet.
2. Sieve the flour, baking powder, salt, mustard powder and cayenne pepper together in a mixing bowl.
3. Rub or cut the cold margarine into the flour mixture until the mixture resembles coarse breadcrumbs.
4. Add the cheese to the flour mixture.
5. Beat the egg and milk together in another mixing bowl. Keep 15ml of the milk-and-egg mixture for glazing later on.
6. Cut the liquid (milk-and-egg mixture) into the flour mixture with a knife or dough cutter until the dough holds together.
7. Do not over-mix as this will cause a tough dough.
8. Place the dough on a lightly floured surface and knead lightly for about 1 minute until the dough is smooth and no longer sticky.
9. Press lightly with your fingertips to an even thickness of 2,5cm.
10. Cut into shapes with a lightly floured cutter.
11. Place the scones, just touching each other, on the baking sheet. They will support each other as they rise.
12. Brush the remaining milk-and-egg mixture into the top surface of the scones, to enhance browning while baking.
13. Bake for ± 15 minutes at 220°C until light brown and done.
