

What plant need to grow?

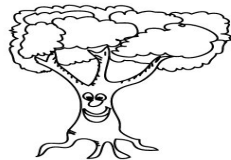

- ✓ Plants need light, water and air to grow.

WHAT PLANTS NEED TO GROW

WHAT PLANTS NEED TO GROW

What plants need to grow

Conditions for growth

In order for plants to grow, they need four important things:

1. Sunlight

- Plants need sunlight to live and grow.
- Green plants use sunlight, water and carbon dioxide to make food (the process of photosynthesis)

2. Air

Plants need air to grow. They use the carbon dioxide in the air to make food for growth.

3. Water

Plants need water to grow and to make food. The roots of a plant absorb the water from the soil. Some plants need more water than others.

4. Soil

Most plants grow best in soil. Soil provides the plant with water and nutrients.

How can we grow new plants?

- **Seeds** - new plants can grow from fertilized seeds.
- **Cuttings** - a cutting is a piece of plant (usually the stem) where a piece is cut off and then planted into the soil where it starts to grow roots.
- **Shoots** - plants can also grow from shoots which are new little roots that grow from the stem of a plant.

What do seeds need to germinate?

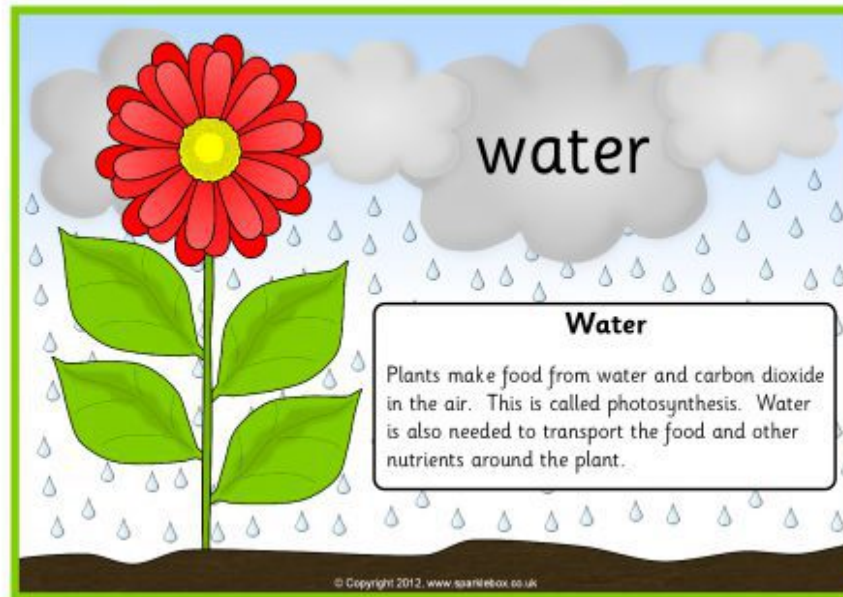

Germination is the process whereby seeds come alive and start to grow into a plant. In order for this to happen, the right conditions have to be met for the seed to start growing. To germinate, a seed requires the following:

- **Water** - without water the seed will not be able to germinate and grow. A seed that doesn't get enough water will shrivel up and die.
- **Warmth** - seeds need warmth to be able to germinate and grow.
- **Air** - seeds need air to be able to germinate and grow.

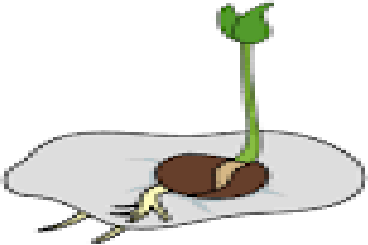

How to grow new plants.

- ✓ You can grow new plants from cuttings or seeds
