STRUCTURE OF A ANIMAL

BASIC STRUCTURE OF A FISH

ACTIVITY

Structures of animals

Monika

All animals have been designed with different parts, which we call structures, that make up their bodies. Each of these structures is important as it is used to perform a specific function.

Activity 1

Look at the picture of the dog. What structures make up its body? Use the word bank to help you label the diagram.

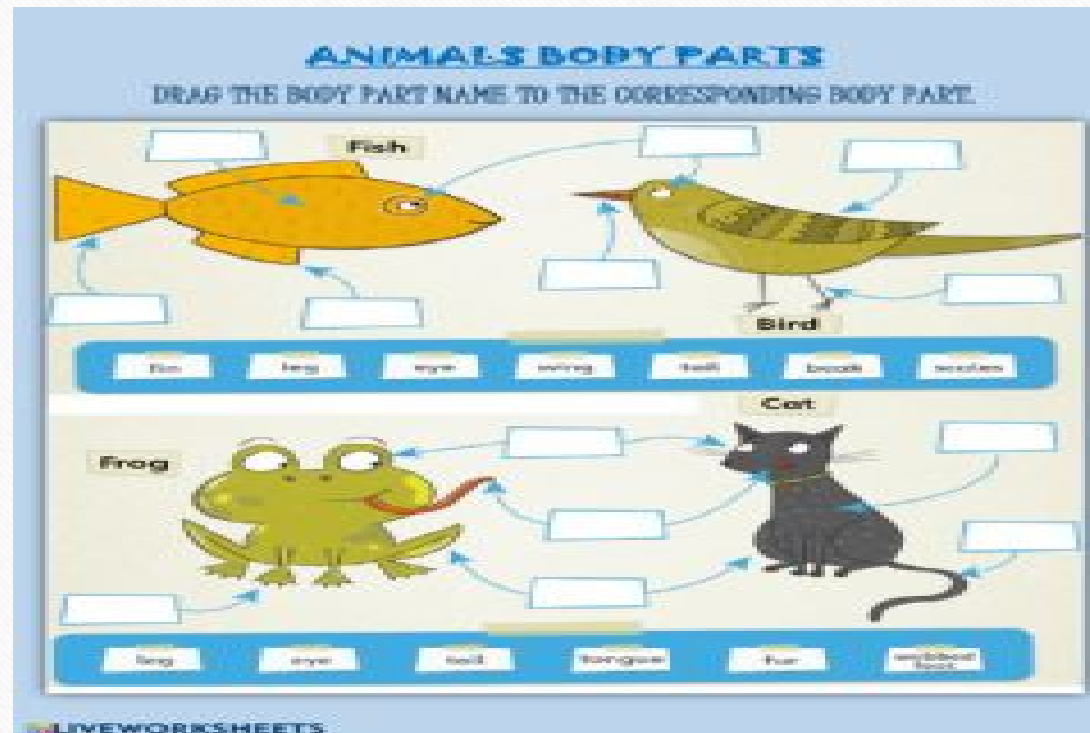

WORD BANK
mouth tongue head nose eyes skin hair
ears body legs

ACTIVITY

Animals have different body coverings.

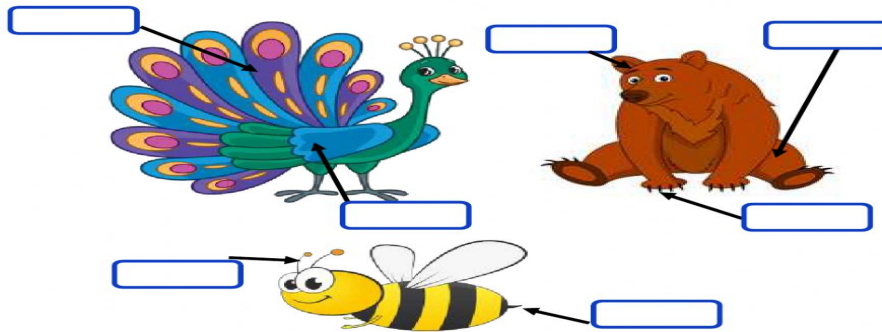

- ✓ Shapes
- ✓ Sizes
- ✓ Sense organs

Examples of different animals with different body coverings

ACTIVITY

1) Choose and complete the parts of the body of the peacock and the bear.

2) Answer the questions with "yes, they have" or "no, they have not"

- | | |
|----------------------------------|--------------------------------|
| - Have spiders got a tail? | - Have bears got a sting? |
| - Have spiders got seven legs? | - Have grasshoppers got wings? |
| - Have centipedes got four legs? | - Have dragonflies got claws? |

ACTIVITY
