

TERM 2 PROCESSING OF MATERIALS

WEEK 7-8

PROCESSING MATERIALS

Processing Of Materials

- When we combine materials, we make new materials
- These are generally very different to how they started out separately as raw or natural materials
- There are different ways to process materials
- There are also numerous reasons why we would want to process materials
- What we want to produce obviously influences what type of materials we will use!

PHYSICAL PROPERTIES OF MATERIALS

Physical properties of materials

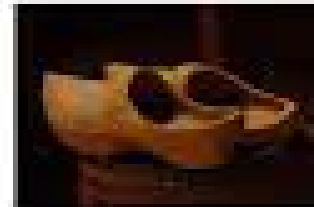

- Humans **use a variety of materials** in their day to day life.
- These products are made from **different materials**, such as **metal, glass, wood, plastics, rubber, etc.**
- We need to understand the **physical properties** of the materials so that we can decide whether to use it for a specific purpose.

CONT.

Physical properties of materials

- Some physical properties that need to be considered for use are: **strength, flexibility, heat conductivity, electrical conductivity**, etc.
- Other considerations can be **boiling point and melting point of a substance**.
- Would you make shoes from wood or a car body from plastic?

CONT.

Physical properties of materials

Material Strength [2]

- Doors and tables are often made from **strong wood**.
- Window frames are made from **steel and aluminium**.
- The materials used to construct dams, bridges, doors and window frames must be both strong and **rigid**.
- The gymnast in the picture is **balancing on a wooden beam that is strong and rigid**.

ACTIVITY 1

Find the words.

Raw Materials and Processed Goods

CLAY
COTTON
LEATHER
METAL
NOTEBOOK
PAPER
POT
RING
SHOES
SKIRT

Read and choose the correct answer.

Clay is a...

raw material

processed good

Shoes are...

raw material

processed goods

A skirt is a

raw material

processed good

Metal is a...

raw material

processed good

Leather is a...

raw material

processed good

A pot is a...

raw material

processed good

ACTIVITY 2

RAW MATERIALS, PROCESSED MATERIALS AND FINISHED PRODUCTS LIVEWORKSHEETS EXERCISES (Key vocabulary: <https://es.liveworksheets.com/jd1067070re>)

1°. Watch the [video](https://youtu.be/1WX9YZ-DkWE). Then listen to the definitions and fill the gaps. *Use lowercase letters.*

A _____ material is a _____ that we _____ directly from nature.

_____ material is _____ that **has been prepared** and **is** available for _____ other **products**.

A _____ product **is** an object _____ by a human being to **satisfy** a _____ or to _____ his/her **quality of life**.

2°. Listen to the definition and choose the proper term.

RAW MATERIALS

PROCESSED MATERIALS

FINISHED PRODUCTS

RAW MATERIALS

PROCESSED MATERIALS

FINISHED PRODUCTS

RAW MATERIALS

PROCESSED MATERIALS

FINISHED PRODUCTS

2°. Match/move the *substance, material or object* towards the correct group.

RAW MATERIALS	PROCESSED MATERIALS	FINISHED PRODUCTS

3°. Classify these raw materials according to its origin:

ANIMAL	VEGETABLE	MINERAL
