## **LIFE SKILLS OCCUPATION CURRICULUM**

Life Skills Occupation deals with the holistic development of the learner throughout childhood. It equips learners with knowledge, skills and values that assist them to achieve their full physical, intellectual, personal, emotional and social potential. The subject encourages learners to acquire and practice life skills that will assist them to become independent and effective in responding to life's challenges and to play an active and responsible role in society. The subject aims to develop learners through four different, but interrelated study areas, that is, Personal and Social Well-being, Physical Education, Creative Arts, and Natural Sciences.

### **LIFE SKILLS OCCUPATION – PHYSICAL EDUCATION**

Physical Education is part of a selection of study areas that make up the Life Skills Learning Programme as specified for the GCE Technical Occupational qualification. It develops learners' physical well-being and knowledge of movement in a safe and developmentally appropriate manner. It encourages learners to use these to perform in a wide range of activities associated with the development of an active and healthy lifestyle. During engagement in this study area, learners will develop motor skills and participate in a variety of physical activities.

## OVERVIEW

According to the United Nations, Educational, Scientific and Cultural Organizations (UNESCO) International Charter of Physical Education, Physical Activity and Sport. Physical Education, physical activity and sport programmes must inspire lifelong participation.

- Physical education, physical activity and sport programmes must be designed to meet the needs and personal characteristics of those practicing them over their whole lifespan.
- Early positive experiences of play, games and physical activities should be prioritized for all so as to lay a foundation of the knowledge, skills, attitudes and motivation necessary for the maintenance of lifelong participation in physical activity and sport.
- As the only area of school curricula concerned with developing students' competence and confidence in sport and physical activity, physical education provides a learning gateway for the skills, attitudes and knowledge necessary for lifelong physical activity and sport; quality and inclusive physical education classes, taught by qualified physical education teachers, should be mandatory in all grades and levels of education.

## Modifications

Schools may choose any activities that suit them given their context. Context speaks to school infrastructure and cognitive level of the learners, teacher attributes and availability of equipment.

### A Physically Educated Person:

1. Demonstrates competency in many movement forms and proficiency in few movement forms.
2. Applies movement concepts and principles to the learning and development of motor skills
3. Exhibits a physically active lifestyle
4. Achieves and maintains a health-enhancing level of physical fitness
5. Demonstrates understanding and respect for differences among people in physical activity settings
6. Understands that physical activity provides opportunities for enjoyments, challenge, self-expression and social interaction

## **SPECIFIC AIMS**

The subject Life Skills Occupation aims to:

- 1) Guide learners to achieve their full intellectual, physical, personal, emotional and social potential;
- 2) Teach learners to exercise their constitutional rights and responsibilities and to respect the rights of others;
- 3) Guide learners to make informed and responsible decisions about their health and environment;
- 4) Develop creative, expressive and innovative individuals;
- 5) Develop skills such as self-awareness, problem-solving, interpersonal relations, leadership, decision-making, and effective communication; and
- 6) Develop learners' skills to respond to challenges and play an active and responsible role in the economy and society;

## **ORGANISATION OF THE CURRICULUM**

In the Life Skills Occupation curriculum, Physical Education is expressed as a study area containing three topics which are:

- 1) Fitness
- 2) Sport
- 3) Games

The issues dealt with in each topic are related to the issues covered in the other two topics of the subject. Owing to the interrelated nature of the study area, the three topics of Physical Education function interdependently, and therefore, are considered to be of equal importance.

## ALLOCATION OF TEACHING TIME

Time for Life Skills Occupation Physical Education has been allocated in the following way:

- 10 weeks per term, with 1 hour per week;
- Year 1-3 has been designed to be completed within 32 weeks per year
- Year 4 has been designed to be completed within 30 weeks. (30 Hours)
- Year 4: No Physical Education content and activities for term 4.
- 8 Hours has been included for assessment for the year (2 Hours per term).
- Year 4 term 3 work will cover 7 weeks plus 1 weeks for revision and 2 weeks for assessment

Below is the summary of time allocation per topic. The time allocation provides an indication of the weighting of each topic. However, this is the guideline and should be applied flexibly according to circumstances in the classroom to accommodate the interests of the learners.

| Topics            | Time Allocation            |
|-------------------|----------------------------|
| Fitness           | 11 weeks (11 hours)        |
| Sport             | 8 weeks (8 hours)          |
| Games             | 12 weeks (12 hours)        |
| Formal Assessment | 8 weeks (2 hours per term) |
| Revision          | 1 Week (1 Hour) Term 4     |

### 3 R's of skill learning: Repetition, Refinement, and Reflection

To effectively participate in fitness, games and sports activities, the teacher must ensure that all learners have the opportunity to perform, repeat, refine and reflect on each loco-motor, non-loco-motor and manipulative skill introduced to them in its simplest form before combining and applying them in the various settings and in their most complex formats.

### Considerations during the Physical Education Lesson:

- Each learner must have an active role in the Physical Education lesson at all times. That all learners get to play all positions, accumulate the same number of repetitions, and are placed in an enjoyable learning environment.
- The intensity, duration and load of all physical activities should be age and developmental appropriate for all the learners involved.
- Focus should be on the learner's ability to demonstrate a clear understanding of concepts and techniques involved in all three topics.

### Formations

Formations, which include learners being in lines, rows, circles, dispersed, individually, paired, seated etc., constitute an important organisational element in the Physical Education class. Formations in the Physical Education class are about maximising space, utilising activity design, and making use of layouts that will arrange learners in ways that will enhance teaching, learning and participation. The utilisation of the formations should always correspond with the activities to be

realised. The teacher must be positioned in such a way that he/she is able of to see all the learners in the class all the time, irrespective of the formation chosen.

## Safety Considerations

Safety (of task/activity, space and equipment) is an essential element of Physical Education and should be introduced and constantly reinforced throughout all lessons. Despite the fact that safety precautions during a Physical Education class cannot remove all risks, they should and may eliminate unnecessary hazards.

In the event of water and gymnastic activities which have been chosen, safety should be taken into consideration **at all times**.

| Water Safety                                                                                                                                                                                                                                                                                                                    | Gymnastics safety                                                                                                                                                                                                                                                                                                                                                      |

| <p><b>Precautions:</b></p> <ul style="list-style-type: none"> <li>• Check the weather and the tides before you leave home if you are going to swim in the sea.</li> <li>• Only enter where the waves are straight and gentle. If you experience a strong current, get out of the sea, or at least do not go in deep.</li> </ul> | <p><b>Support/assistance practical:</b></p> <ul style="list-style-type: none"> <li>• Always warm up and stretch before doing gymnastics.</li> <li>• Only practice on padded floors, never on a hard surface. Mats should be placed under the equipment and properly secured, at all times.</li> <li>• Have a coach or program director who is qualified and</li> </ul> |

|                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"> <li>• Never swim while you are intoxicated.</li> <li>• Buddy up! Always <u>swim</u> with a partner</li> <li>• Enter the water feet first as a rule.</li> </ul>                                                                                                                                                                                 | <p>is at every practice. Injuries stemming from overuse are common in gymnastics and only put a gymnast at risk for more serious injuries.</p> <ul style="list-style-type: none"> <li>• Learn how to fall safely. This is one of the first skills a gymnast learns' and it prevents both head and neck injuries.</li> <li>• Some safety tips: Use correct matting ... Never try a new skill without supervision ... Do not run around the gym ... Watch out for other gymnasts ... Listen to the teacher/coach ... Stay off your head ... Stretch before practice, warm-up before stretching ... If something hurts, tell your teacher/coach ... Have fun.</li> </ul> |
| <p><b>Priorities of water rescue:</b></p> <ul style="list-style-type: none"> <li>• Your own personal safety should always be the number 1 priority in any rescue situation. Self-preservation is paramount!</li> <li>• People in difficulty in the water are likely to be in a state of panic, fearing for their lives, and this makes the situation highly dangerous.</li> </ul> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <p><b>The 4 A's of Rescue; Awareness, Assessment, Action and Aftercare.</b></p>                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

**Awareness:** recognise an emergency and accept responsibility.

**Assessment:** make an informed judgement.

**Action:** develop a plan and affect the rescue.

**Aftercare:** give aid until medical help arrives

## Warm-Up and Cool-Down

Warm-up and cool-down sessions should be part of every class. These exercises prepare muscles properly for physical activity and aid in overall recuperation and ultimately prevent injury.

Every physical activity session should be preceded by a period of warm-up where the body is prepared gradually for the physical activity to follow.

Warm up sessions generally include (a) joint mobility exercises, (b) stretching exercises and (3) preparatory/motivational games or activities. Warm-up activities should generally last between 5-8 minutes.

## Preparatory Games/Activities

## PHYSICAL EDUCATION CONTENT CONCEPTS KNOWLEDGE AND SKILLS

**The Movement Analysis Framework<sup>1</sup> - The Wheel** (see appendix) - is intended to show how the skill themes and movement concepts interact with each other. Skill themes and movement concepts, differentiate the movements (skill themes) from the ideas (movement concepts) used to modify or enrich the range and effectiveness of skill employment.

| Space Awareness        |                              | Effort               |                                 | Relationships                                                                                                                                |
|------------------------|------------------------------|----------------------|---------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------|

**Activity 1.****Jump over a rope**

Use a long rope with a bean bag attached to the end of the rope.

One learner stands in the middle and swings the rope in a horizontal circle around the body. The other learner jump over the rope as it passes them.

Give other learners the opportunity to be in the middle.

**Activity 2****Jump over a partner in a circle**

The partners are on hand and knees in kneeling position in a circle.

The other learners run in a circle and jump over the learners who are kneeling.

Do the activity 3 times and swap.

**RECOVERY PHASE: Cool down activity**

1. Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.
  - Ask the learners to stand with feet slightly apart and to lean forward with straight legs with hands on shin/knees (*standing forward bend*).
  - Instruct the learners to put their hands behind their heads and take deep breaths to get their breathing rate back to normal

|                                                                                                                                            | <b>Activity1: Sprint/Hurdles/Slalom Shuttle Relay</b>  <ul style="list-style-type: none"> <li>Two lanes are necessary for each team: one lane with and the other one without hurdles.</li> <li>The first distance is the hurdle distance combined with slalom poles, then the team members run the sprint distance as a regular Relay.</li> <li>The event is completed once each team member has run both the flat and the slalom/hurdles distances.</li> <li>A soft-ring (relay baton) is carried in the left hand and handed over to the left hand of the receiving runner each time.</li> </ul> <b>Activity 2: Balance Tag</b> <ul style="list-style-type: none"> <li>Place one hula hoop per learner around activity space</li> </ul> |          |

- When the music starts, learners are to jog around the activity space without touching the hula hoops.
- When the music stops, learners should hop into a hula hoop and balance the way the teacher tells them to:
- Balance on your left foot.
- Balance on your right foot.
- Stork stand balance.
- Make a bridge (belly facing up) and balance.
- Make a bridge (belly facing down) and balance.
- Reach as high up as you can and balance on your tippy toes.

### **RECOVERY PHASE: Cool down activity**

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

### Activity 1.2: Yo-yo

- Set out three cones 10m apart
- Divide learners into two groups, with half the runners lining up behind cone 1 and the other half behind cone 3
- The first learner lined up behind cone 1 sprints to cone 2.
- At cone 2, the learner returns to cone 1 by running backwards
- At cone 1, the learners sprints forward again to cone number 3 and 'tags' the next learner who runs forwards from cone 3 to 2, then backwards from 2 to 3, and then forwards from 3 to 1, before tagging another learner.
- This cycle repeats until every learner have had a turn. The total distance run each time is 40m, so repeat no more than four times for each learner
- Bring variations to the activity to instil the fun element into the activity.

### RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

| <b>CORE PHASE:</b><br><b>Main activities</b><br>Skill development is most important. Adequate time is needed to practice new skills | <b>Year 2: Term 1</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |          |
|                                                                                                                                     | <b>Activity 1: Running</b> <p>Before learners engage in actual distances running they need to get some techniques right and these include:</p> <b>How to run properly: Arm swing</b> <p>Although running predominantly uses your legs to power you through, your arms also play an important role.</p> <p>The teacher instructs learners to do a spot run incorporating the following:</p> <ul style="list-style-type: none"><li>Stand up straight with their knees slightly bent, their feet shoulder-width apart and their arms stretched horizontally to the sides.</li><li>Cross their arms at the front and then quickly bring them back as far as they can. Repeat.</li></ul> |          |

The teacher instructs learners to run across a soccer field and incorporate all the factors in the in picture on the next page.

### **RECOVERY PHASE: Cool down activity**

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

|                                                                                                                                                                                               | <b>Activity 1: Games that include rotation, elevation and balance (groups)</b>                                                                                      |          |
|                                                                                                                                                                                               | <b>Activity 1.1: Beat the Ball</b><br>                                          |          |

- All but 1 learner form a circle large enough for them to be able to throw the ball around to each other.
- The additional learner is a runner starting beside the learner with the ball.
- On “GO” the ball is thrown around the circle, while the runner races around the outside trying to beat the ball back to the start.
- The runner wins if they can beat the ball around the circle.
- The ball must pass to every learner in the circle before reaching the original learner
- Change runners and include different ball manipulations (skip/jumps, strike).

### **Activity 1.2: Over and Under**

- Have learners line up behind each other in groups of 4 to 6, spreading out one arm's length distance apart.
- Give the learner in front of the line a ball.
- Learners pass the ball either over their head or under their legs to their teammates, alternating methods with each learner (first learner passes over their head, second learner passes under their legs, third learner over their head and so on).
- After each pass learners must run, skip or jumps to the back of the line and start passing the ball over their head or under their legs again.
- Play until one group's ball reaches the finish line.

- |  |                                                                                                                                                                                                                                                                                 |

Provide learners with hessian bags. Learners will step into the bag with both feet.</li> <li>• Learners will hop with their bag between two cones placed 15m apart.</li> </ul>  |          |

## Activity 1.2: Forward Squat Jumps

### Forward Squat Jumps

**Brief description:** Two feet forward hops from a squat position

**Figure**

- From a starting line the learners carry out a “frog-jump” one after another (“frog-jump”: two feet forward squat jump).
- The first learner of the team stands with the tips of the toes at the starting line. He/she then squats down and jumps forward as far as possible, landing on both feet.
- The teacher marks the landing point that is nearest to the starting line (heels). If a learner falls back the landing point of his/her hand for example is the one marked.
- The landing point, in turn, becomes the starting line for the second jumper of the team, who carries out his/her “frog-jump” from there. The third team-mate jumps from the landing point of the second one, and so on.
- The event is completed when the last member of the team has jumped over the landing point that is marked.
- Learners remain in their groups but are required to run through the agility ladder side-ways with one foot in each block.
- This is followed by learners running side-ways but stepping into and out of each block with both feet.

- Learners then move to the mini-hurdles and are required to hop side-ways over each of the 4 hurdles which are placed 50cm apart.

### **RECOVERY PHASE: Cool down activity**

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

|                                                                                                                            | <b>Activity 1: Dribbling: the ability to control while running)</b>                                                                                                     |          |

Skill development is most important. Adequate time is needed to practice new skills

The controlled dribble consists of a series of short taps in the direction in which the player chooses to move.

- The hands should be spread 25.4-35.6 centimetres. apart to gain greater control of the stick.

**To perfect the skill of dribbling, the teacher instructs learners to:**

- Each learner to have a stick and a ball
- On signal, learners should change the direction while maintaining control of the ball.
- Learners should dribble and dodge imaginary tacklers or dodge around a set of cones. Partners may act as tacklers

### **RECOVERY PHASE: Cool down activity**

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

After deciding where to kick the ball, it is then very important that the kicker's |          |  |

practice new skills

eyes stay focused on it. The kicker should lean forward so that their head is comfortably over the ball. Hold the ball vertically with the hands across the seams.

The kicker then drops the ball, points their toes towards the ground, keeps the knee bent and over the ball. Strike the upper half of the ball, with the laces, just before it bounces. Extend the leg through to a low, straight position, this should send the ball along the ground

#### Game situation

#### RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

|                                                                                                                                                                                    | <b>Activity 1: Netball: Positions</b><br>Netball is a fast-paced, non-contact sport. Each team has seven players who all have different positions. Each player has a designated area on the court where they are allowed to move. <div style="text-align: center;"> <b>Netball court</b>  </div> |          |

| Position | Responsibilities                                                        | Court Area |
|----------|-------------------------------------------------------------------------|------------|
| GS       | To score goals and to work in and around the circle with the GA         | 1 & 2      |
| GA       | To feed and work with GS and to score goals                             | 1, 2 & 3   |
| WA       | To feed the circle players giving them shooting opportunities           | 2 & 3      |
| C        | To take the Centre Pass and to link the defence and the attack          | 2, 3 & 4   |
| WD       | To look for interceptions and to prevent the WA from feeding the circle | 3 & 4      |
| GD       | To win the ball and reduce the effectiveness of the GA                  | 3, 4 & 5   |
| GK       | To work with the GD and to prevent the GS from scoring goals            | 4 & 5      |

### **Activity : Centre pass**

The aim is practice different passing options at the center pass.

**Composition:** 8 players, 4 attackers and 4 defenders in two-thirds of the court.

- Players position themselves in standard centre pass formations.
- C passes to GA who has made a diagonal drive into the centre third. Meanwhile the WA drives to the top of the shooting area to receive the next pass.
- WA passes to the GS, who will shoot.

### **RECOVERY PHASE: Cool down activity**

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

|                                                                                                                                     | <b>Activity 1: Cardiovascular lap running</b><br><br>Cardio exercises can have many beneficial effects on a person's body.<br><br><b>Running in place</b><br>When running in place, a person moves their body as if they were running, but they stay in one space. Running in place can reduce <u>muscle fatigue</u> , improve aerobic exercise ability, and strengthen muscles.<br><br>Running in place can be part of an interval workout. This is where a person completes repetitions of different exercises in a set time. An example of an interval workout that includes running in place is the following: <ul style="list-style-type: none"> <li>• Run in place for 2 minutes.</li> <li>• Increase speed for 1 minute.</li> <li>• Rest for 1 minute.</li> <li>• Jog in place for 3 minutes.</li> <li>• Rest for 1 minute.</li> <li>• Step up and down for three minutes on the stairs</li> <li>• Rest for 1 minute</li> <li>• Butt kicks for 1 minute</li> <li>• Rest for 1 minute</li> </ul> |          |

### **Safety issues**

- Make sure learners warm up before and cool down after every workout session giving their body time to recover between workouts.

### **Activity 1.2: Pony express**

#### **How to play?**

- Start by dividing the learners into two teams.
- Have the team's line up on opposite sides of the circle. The first player should be standing on the circle line with the rest of the players standing behind him or her. The first player in the line holds the baton if you decided to use one.
- When you say go, the first players on both teams will start running around the circle in a clockwise direction. They have two goals — either to reach their starting point and hand their baton to the next player without being tagged OR to tag their opponent.
- If the player successfully makes it to their starting point and hands the baton off, they walk to the end of their team's line and awaits their next go.
- Play continues until one player manages to catch the player on the other team.

### **RECOVERY PHASE: Cool down activity**

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

|                                                                                                                                     | <p><b>Hockey Striking:</b></p> <p>The hit is used for longer passing because it generates the most speed. Start with the ball in the control box and the player in a balance position. The hands must come together for the hit. The left hand remains at the top of the stick and the right hand slides up so that the hands are together. From this position the player swings the stick back towards the right shoulder. It is essential to keep the head down the whole way through this sequence. The player now swings the stick down, keeping the left arm almost straight and the eyes on the ball. The player then swings through the ball, following through in the direction of the target.</p> <div data-bbox="485 1487 1315 1771">  </div> <p><b>Activity 1:</b></p> <ul style="list-style-type: none"> <li>• Players line up in groups, each group behind a cone.</li> </ul> |          |

### **Activity 2: Wall push-ups**

- Doing a standing push-up against the wall is a good starting place if you're new to this move. By standing, you put less pressure on your joints.
- With your feet shoulder-width apart, stand about an arm's length away from a wall.
- Place your palms on the wall as you lean forward into a standing plank position. Your arms should be shoulder height and shoulder-width apart.
- Inhale as you bend your elbows and slowly move your upper body toward the wall while keeping your feet flat on the ground.
- Hold this position for a second or two.
- Exhale and use your arms to push your body slowly back to your starting position.

### **RECOVERY PHASE: Cool down activity**

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

is needed to practice new skills

**Station 1:**

Squat Jumps: 10 to 15 repetitions

**Station 2:**

Calf Raises: 15 to 20 repetitions

**Station 3**

Bench Dips: 10 to 15 repetitions

**Station 4:**

Abdominal Crunches: 15 to 20 repetitions

**Station 5:**

Walking Lunges 15 to 20 repetitions

**Station 6:**

Twist Crunches 15 to 20 repetitions

**Activity 1.2: Score**

- Place a bucket at each end of the playing area. Divide the class into small groups.
- Each group forms a line behind a bucket.
- Select a designated loco-motor skill (e.g., jog, hop, jump, and skip). On signal, one learner from each group selects a ball from the bucket, carries it to the bucket at the end of his/her lane while performing the designated loco-motor movement, and slam-dunks the ball into the bucket.
- After successfully slam-dunking the ball into the bucket, the child returns to the end of that line and awaits his/her next turn.

**RECOVERY PHASE: Cool down activity**

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

|                                                                                                                                                    | <p><b>Cricket:</b></p> <p>Take guard by holding the bat upright</p> <p><b>Fundamentals of batting – backward defence</b></p> <ul style="list-style-type: none"> <li>• The backward defensive stroke is played to a short-pitched ball in line with the stumps, which is not short enough to play an attacking shot.</li> <li>• The back foot is moved back and across to the line of the ball with the front foot naturally following it.</li> </ul> <p><b>The technique:</b></p> <ul style="list-style-type: none"> <li>• The right foot must be moved back and across in front of the stumps.</li> <li>• The left foot should be automatically brought across so that the stumps are completely protected.</li> <li>• The toe of the right foot should point towards the extra cover or mid-off region.</li> <li>• The full weight of the body should be taken on the right foot.</li> <li>• The right hand slides down to the bottom of the handle, to give added control. Try to play the ball towards the bowler or mid-on rather than towards cover.</li> <li>• For a rising ball, the right hand should be left loose.</li> <li>• The bat in its downward path should pass just outside the right pad as it comes forward to meet the ball</li> <li>• Allow the ball to come onto the bat</li> </ul> |

### Activity 2: Volleyball Receiving and Passing

- Volleyball is a team sport in which two teams of six players are separated by a net.
- Teacher goes through the basic rules of volleyball
- 6 players on a team, 3 on the front row and 3 on the back row.
- Maximum of three hits per side.
- Player may not hit the ball twice in succession (A block is not considered a hit)
- Ball may be played off the net during a volley and on a serve.
- A ball hitting a boundary line is "in"
- Teacher introduces the game but learners to follow the basic rules

### Tennis:

A tennis match:

- **Coin Toss.** Before any tennis match begins, the players meet at center of court to determine who will serve first and from which side of the court that will be from.
- **Serving Faults.** The beginning of every point in tennis starts with a serve. Player tosses the ball into the air and attempts to hit it across the net into the opponents service box diagonally across the court
- **Sets/Games** – a player must win 6 games to win a set. To win a game a player must score 4 points before the opponent
- **Tiebreakers** – if players are tied at 6 games each then the set winner is decided by a tiebreaker which requires a different scoring and the first player to reach 7 points with a 2 point gap over the opponent will be the winner
- **Deuce** is called when both players scored are tied at 40-40. The first player to score 2 consecutive points will be the set winner
- Teacher allows learners to participate in playing a game of 4 points and then rotating to give all learners an opportunity

### Swimming

**Breaststroke** is executed with the body facing down.

- The arms perform semi-circular movements, and the legs perform a frog kick.
- This style allows you to swim with your head above the water and therefore breathe freely and keep your eyes open.

|                                                                                                                                                    | <p><b>Activity 1: Athletic games: Flags</b></p> <p><b>Description:</b></p> <ul style="list-style-type: none"> <li>Place two cones 30 m apart with two 'flags' in the middle exactly 15 m from each cone. The 'flags' can be tennis balls or relay batons, or any object the learners can pick up.</li> <li>Divide the learners into two groups, with one group standing behind cone 1 and the other behind cone 2</li> <li>On command (whistle, clap), one learner from each group sprints from his cone to the middle and picks up a flag (ball or baton), before sprinting back to the cone and handing it over to next learner</li> </ul> |          |

- The second learner from each group must then sprint and place the cone back in the middle before returning to the cone to tag in the next learner
- This continues until each learner has had a turn
- Repeat no more than four times for each learner.
- Teacher introduces variations in the activity to continue the excitement. Fun!!

#### **RECOVERY PHASE: Cool down activity**

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

|                                                                                                                                                                         | <b>Gymnastics - Rhythmic with hand apparatus (Balls)</b> <ul style="list-style-type: none"> <li>• Learners are encouraged to choreograph a rhythmic gymnastics sequence with a ball.</li> <li>• Teach learners the different movements with a ball.</li> <li>• The movements are: throwing, catching, rolling, bouncing, carrying and swinging.</li> <li>• Ball should rest in the front part of the palm and never be grasped or held in a wrist grasp.</li> <li>• <b>Movements:</b> <ul style="list-style-type: none"> <li>- <b>Forward swing:</b> Stand, feet together, with the ball in the right hand, the right arm extended backward and the left arm extended forward.</li> </ul> </li> </ul> <p>Swing the right arm forward to shoulder height, change the ball to the left hand, and swing the left hand back. Continue swinging arms forward and back.</p> <p><b>Swing across the body:</b> Stand in a wide straddle, the ball in the right hand and the arms in side extension. Swing the right arm across the body to the left, change the ball to the left hand and</p> |          |

swing it across to the right side. The body should sway from side to side with the ball swing.

**Forward circling:** Stand with the ball in the right hand, the right arm extended backward, and the left arm extended forward. Circle the ball in a complete circle forward, upward, backward and forward again. Change to the left hand in front of the body and continue to the left.

**Circling around the body:** Stand with the ball in the right hand, the arms in side extension. Swing the ball across the front of the body to the left. Change to the left hand, carry the ball behind the body, and change to the right hand.

**Side floor roll:** Stand in a wide stride, the ball in the right hand, the arms in side extension. Roll ball along the floor to the left, letting it roll up into the left hand as the weight is shifted to the left, and the trunk is bend.

**Bounce with arm swing:** Stand with the ball held in both hands in front of the body. Drop the ball in front of the body, let the arm swing horizontally to the sides and back to front position, catching the ball. The knees and body should “give” with the bounce.

**Bounce with knee bend**

**Bounce ball in front across the body**

**Bounce under the leg**

**Throwing and catching movements:**

**Two-hand throw:** Stand holding the ball in both hands low in front of the body. Bend the knees slightly, then throw the ball upward, getting a complete extension throughout the body and rising up to the toes. As the ball descends, catch it with the fingertips and let the body bend slightly as the hands carry the ball down to the starting position.

**One-hand throw**

**Overhead throw**

**Front swing throw**

- Groups are given time to prepare a sequence with at least five different movements.

### **Swimming: Backstroke**

#### **Backstroke Technique**

1. The body must be as horizontal and streamlined as possible, with the head inline, eyes looking upwards and remaining steady throughout.
2. The alternating leg kick originates from the hip and remains within the body width.
3. Toes are pointed with ankles relaxed, and the knees bend slightly with each kick.
4. The knee bend provides power on the upbeat phase of the kick, finishing as the toes break the water surface.
5. The hands enter the water with little-finger first, palm outwards with the upper arm just brushing past the ear.
6. The arm pulls through an S shape pathway, finishing at the hip, palm downwards.
7. One arm begins to pull as the other recovers over the water surface.
8. Breathing should be regular
9. The leg kick and arm actions should be controlled

### RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

| TOPIC: GAMES                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | WEEK 4-5 |

is most important. Adequate time is needed to practice new skills

## Basic Skills

- **Low Catch Passing Drill**

Get players used to handling the ball in a low body position with this beginner passing drill. Athletes toss the ball high into the air, allow it to bounce once then catch it just before it hits the floor a second time while in a low base.

- **Volleyball Burpee Passing Drill**

This is one of many useful volleyball passing drills for beginners. It is a progression of the low catch passing drill that teaches players to move with the ball. After catching the ball in a low position, players tap it on the floor to the right, middle, and left of their bodies, then pop up to a standing position.

- **Deliver and Pop Serve Drill**

Get players comfortable with the overhand serve toss by teaching them to “deliver” the ball at the top of their reach, then drop the ball to the floor. Next, have them add a small toss at the delivery point, then contact the ball with a “pop” from their serving hand.

- **10 to Kill Ball Control Drill**

Practice ball control with this cooperative 6 vs. 6 drills that encourages both teams to work together. Once the ball has crossed the net 10 times, either side can attempt a kill to win a big point. The first team to score five big points wins!

- **Popcorn Ball Control Drill**

Get athletes comfortable with ball control using “long and strong” arms. Players bounce a volleyball from arm to arm using a single bounce, then progress to a double bounce.

- **Big Kernel Little Kernel Ball Control Drill**

In this variation on the popcorn drill, players practice control by bouncing a ball from arm to arm using a little bounce, big bounce pattern.

### **RECOVERY PHASE: Cool down activity**

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

|                                                                                                    | Tennis racing rallies<br>Teams rally on half/third of a court in service boxes. At one end, just behind the baseline, there is a team hoop with 3 balls inside          |          |

is most important. Adequate time is needed to practice new skills

- Learners start on the service line
- On 'go' learner 1 gets a ball from their hoop and returns to the service line to rally
- When the team gets a rally of 10, Learner 1 takes the ball and puts it in another team's hoop
- Learner 1 then gets another ball from their hoop and starts again
- The winning team is the first one to have no balls in their hoop
- You can have more than 2 in a team by rotating the learners between rallies or shots
- After 3 minutes, if there is no winner then the game stops and the team with least balls in their hoop wins.

### **RECOVERY PHASE: Cool down activity**

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

|---------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Aerobic Exercise</b>         | Steady activity in which the heart can supply all the oxygen the muscles need. Any activity that uses large muscle groups, can be maintained continuously and is rhythmic in nature                                                                                                                                                                                               |
| <b>Agility</b>                  | The ability to change direction and position of the body with speed and control.                                                                                                                                                                                                                                                                                                  |
| <b>Balance</b>                  | The ability to maintain equilibrium when stationary or moving (not to fall over) through the coordinated actions of our sensory functions                                                                                                                                                                                                                                         |
| <b>Balance – Static</b>         | The ability to retain the centre of mass above the base of support in a stationary position                                                                                                                                                                                                                                                                                       |
| <b>Balance – Dynamic</b>        | The ability to maintain balance with body movement                                                                                                                                                                                                                                                                                                                                |
| <b>Bench Press</b>              | Lay on bench, flat on back. Press weight-bar from chest to full extension                                                                                                                                                                                                                                                                                                         |
| <b>Bleep test</b>               | The test to measure cardiovascular endurance                                                                                                                                                                                                                                                                                                                                      |
| <b>Body composition</b>         | Body composition is the amount of fat tissue in the body                                                                                                                                                                                                                                                                                                                          |
| <b>Body mass index (BMI)</b>    | How to measure body composition – skin fold test                                                                                                                                                                                                                                                                                                                                  |
| <b>Cardiovascular Endurance</b> | The ability to keep working for long periods of time without getting tired (fatigue). Cardio-respiratory endurance is the ability of the body's circulatory and respiratory systems to supply fuel and oxygen during sustained physical activity.                                                                                                                                 |
| <b>Control</b>                  | The ability to control the movement of the body in co-operation with the body's sensory functions, e.g. catching a ball (ball, hand and eye co-ordination)                                                                                                                                                                                                                        |
| <b>Co-ordination</b>            | <p>The ability to move one or more body parts at the same time</p> <p>There are a number of different types of skills:</p> <ul style="list-style-type: none"> <li>• Cognitive or intellectual skills that require thought processes</li> <li>• Perceptual – involving interpretation of presented information</li> <li>• Motor – involving movement and muscle control</li> </ul> |

|                          |                                                                                                                                                                                                                                                                                                                            |
|--------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                          | <ul style="list-style-type: none"> <li>Perceptual motor – involving the thought, interpretation and movement skills</li> </ul> <p>A learner tossing a ball into the air and striking it with a racquet or hand</p>                                                                                                         |
| <b>Circuit Training</b>  | Training that uses a circuit of exercises around a number of different workstations. Perform each exercise a certain number of times (10 reps) or for a certain length of time (60secs)                                                                                                                                    |
| <b>Cool-down</b>         | A cool-down activity brings the mind and the body back to a relaxed state. Helps to reduce the risk of injury.                                                                                                                                                                                                             |
| <b>Core</b>              | Muscles in your abdomen and back that are attached to your spine and pelvis. Core strength refers to the strong muscles around your torso                                                                                                                                                                                  |
| <b>Core exercises</b>    | Abdominal crunches, sit-ups and push-ups                                                                                                                                                                                                                                                                                   |
| <b>Dance</b>             | Taking a series of rhythmical steps (and movements) in time to music                                                                                                                                                                                                                                                       |
| <b>Elevation</b>         | Elevation is the upward movement of structures of the body, e.g. elevation of a shoulder joint raises the corresponding arm vertically upwards                                                                                                                                                                             |
| <b>Endurance</b>         | Endurance means the general ability to do any kind of physical activity that increases the heart rate. Endurance exercises improve the health of your heart, lungs, and circulatory system                                                                                                                                 |
| <b>Exercise</b>          | Purposeful physical activity that is planned, structured and that improves or maintains personal fitness                                                                                                                                                                                                                   |
| <b>Fairness</b>          | <p>Fairness within physical education:</p> <ul style="list-style-type: none"> <li>Taking turns</li> <li>Sharing equipment and apparatus</li> <li>Recognising and accommodating the different abilities of their peers</li> <li>Accepting anyone can take part regardless of their race, religion, gender or sex</li> </ul> |
| <b>Fine Motor Skills</b> | Fine motor skills refer to the coordination between small muscle groups, like those in their hands, wrists, and fingers in coordination with their eyes                                                                                                                                                                    |

|                                    |                                                                                                                                                                                                                                                                                                            |
|------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Fitness: Health-related</b>     | Cardiovascular endurance, muscular strength, muscular endurance, flexibility and body composition                                                                                                                                                                                                          |
| <b>Fitness: Skills-related</b>     | Agility, balance, speed, power, reaction time, coordination                                                                                                                                                                                                                                                |
| <b>Flexibility</b>                 | Flexibility, <a href="#">mobility</a> and suppleness all refer to the range of limb movement around joints                                                                                                                                                                                                 |
| <b>Formations</b>                  | Formations in the PE class are about maximising space, utilising activity design and using layouts that will arrange learners in ways that will enhance teaching, learning and participation. Formations: lines, rows, circles, semi-circle, dispersed, individual, paired, seated etc.                    |
| <b>Frequency</b>                   | How often you do the activity                                                                                                                                                                                                                                                                              |
| <b>Fundamental movement skills</b> | Fundamental movement skills (FMS) are the basic movements traditionally associated with physical activity. The most common FMS include running, jumping, throwing, catching, skipping, and hopping. It involves different body parts such as feet, legs, trunk, head, arms and hands                       |
| <b>Gallop</b>                      | A two-beat stride during which both legs are off the ground simultaneously, either right foot stays back and left foot is forward or left foot stays back and right foot is forward, toe-to-heel                                                                                                           |
| <b>Games</b>                       | A game is an activity or sport usually involving skill, knowledge, or chance, in which you follow fixed rules and try to win against an opponent                                                                                                                                                           |
| <b>Gross motor skills</b>          | Gross motor skills involve the large muscles in the arms, legs and torso. Gross motor activities are important to everyday physical activities like walking, running, throwing, lifting, kicking, etc.                                                                                                     |
| <b>Health</b>                      | Is a state of complete physical, mental and social well-being                                                                                                                                                                                                                                              |
| <b>Hopscotch</b>                   | A popular playground game in which learners toss a small object, into numbered pattern of rectangles outlined on the ground and then hop or jump through the spaces and retrieve the object. It is a game that can be played with several learners or alone. Hopscotch is a physical and cognitive workout |

|                                             |                                                                                                                                                                                                                                                                                                                                                                 |
|---------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Indigenous games (traditional games)</b> | Are recreational activities that originated from a particular cultural group or community. Some of these games have become very competitive                                                                                                                                                                                                                     |
| <b>Invasion games</b>                       | Teams score when they move an object (ball) into the opposing team's zone and successfully attack that team's goal or target area. Tactical problems related to invasion games include maintaining possession, attacking and/or defending a goal, winning the ball, etc. Examples of invasion games include netball, basketball, football, rugby and hockey     |
| <b>Joint mobility</b>                       | Joint mobility refers to the movement around a joint. Having a full range of motion means you have healthy joints. However, if you have difficulty with your range of motion, it could indicate an underlying problem or be the result of an injury                                                                                                             |
| <b>Loco-motor skills</b>                    | Motor skills in which the feet move the body from one place to another (Walking, Running, Hopping, Jumping, Skipping, Galloping, Sliding, Leaping)                                                                                                                                                                                                              |
| <b>Lunge</b>                                | A lunge can refer to any position of the human body where one leg is positioned forward with knee bent and foot flat on the ground while the other leg is positioned behind.                                                                                                                                                                                    |
| <b>Manipulative skills</b>                  | Movement skills that require an ability to handle an object or piece of equipment with control. They include skills such as kicking, striking, dribbling or catching a ball. Can also be referred to as 'object control skills'                                                                                                                                 |
| <b>Midline crossing</b>                     | Crossing the midline happens when your child moves their hand or foot across this line to work on the opposite side of their body. Before crossing the midline happens, a child will typically use only one side of their body at a time.                                                                                                                       |
| <b>Modified sport</b>                       | It can take various forms but are generally designed to be an introductory or more accessible version, of a sport. The sport is adapted to allow for people with mobility issues or different skill levels to participate. Modify the equipment and rules of the sport to match the developmental stage of the learners e.g. mini-volleyball, mini-cricket etc. |

|                                |                                                                                                                                                                                                                                                                                                                                      |
|--------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Muscular strength</b>       | The ability to exert a large amount of force in a single maximum effort                                                                                                                                                                                                                                                              |
| <b>Muscular endurance</b>      | The ability of the muscles to perform physical tasks over a period of time without becoming tired (fatigue)                                                                                                                                                                                                                          |
| <b>Non-loco-motor movement</b> | Non-loco-motor skills are fundamental body movements that do not involve travelling. They are stability skills that include movements of limbs or body parts, and sometimes even the whole body. There are many different non-loco-motor movements, including: bending, stretching, lifting, raising, twisting, turning and rotating |
| <b>Obstacle course</b>         | An obstacle course is a series of challenging physical obstacles an individual or team must navigate, usually while being timed. Obstacle courses can include running, climbing, jumping, crawling and balancing elements with the aim of testing speed, endurance and agility                                                       |
| <b>Physical Literacy</b>       | Individuals who are physically literate move with competence and confidence in a wide variety of physical activities that benefit the healthy development of the whole person                                                                                                                                                        |
| <b>Posture</b>                 | The position in which someone holds their body when standing or sitting. To improve posture regular exercise and stretching is important                                                                                                                                                                                             |
| <b>Power</b>                   | The ability to produce a large amount of force in one action. To undertake strength performances quickly                                                                                                                                                                                                                             |
| <b>Press-up</b>                | Start in a high plank position with your palms on the floor at shoulder width. Keeping a tight core, bend your elbows, descending until your chest grazes the floor. Push yourself back up while exhaling, maintaining a straight back.                                                                                              |
| <b>Reaction time</b>           | The time between the presentation of a stimulus and the onset of movement                                                                                                                                                                                                                                                            |
| <b>Recreation</b>              | An activity done for fun (enjoyment)                                                                                                                                                                                                                                                                                                 |
| <b>Relay</b>                   | A race between teams in which each team member covers a certain part of the course (normal exercise, athletics, swimming)                                                                                                                                                                                                            |
| <b>Respect</b>                 | Respect within physical education:                                                                                                                                                                                                                                                                                                   |

|                    |                                                                                                                                                                                                                                                                                                                                              |
|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                    | <ul style="list-style-type: none"> <li>• Caring for equipment and apparatus</li> <li>• Celebrating others' successes, including of opponents</li> <li>• Listening to teachers' instructions</li> <li>• Listening and responding to others' ideas</li> <li>• Understanding everyone has a right to take part regardless of ability</li> </ul> |
| <b>Rotation</b>    | Rotational skills range from simple leaps with turns to more complex acrobatic manoeuvres and artistic flight elements with rotations about the body axes                                                                                                                                                                                    |
| <b>Safety</b>      | Safe practice should be an integral part of all aspects of physical education and sports, at all ages and levels of ability. Accidents do happen, as the nature of physical activities leads to a greater potential risk                                                                                                                     |
| <b>Shuttles</b>    | A physical exercise, drill or endurance activity involving repeated runs/sprints to and fro, between marked points or lines                                                                                                                                                                                                                  |
| <b>Sit ups</b>     | Lie flat on your back with fingertips behind your head, knees bent, legs together and feet flat on the floor. Elbows should be in line with ears. Raise upper body until you are upright -one should feel the abs tighten                                                                                                                    |
| <b>Speed</b>       | Speed, as it will be defined in PE, is the rate (time) at which a person or object moves                                                                                                                                                                                                                                                     |
| <b>Sport</b>       | An activity involving physical exertion and skill in which an individual or team competes against another or others for entertainment. The Sport is usually governed by a set of rules, which serve to ensure fair competition and allow consistent adjudication of the winner                                                               |
| <b>Squat</b>       | A squat is a strength exercise in which the trainee lowers their hips from a standing position and then stands back up. During the descent of a squat, the hip and knee joints flex while the ankle joint dorsi-flexes; conversely the hip and knee joints extend and the ankle joint plantar flexes when standing up.                       |
| <b>Squat jumps</b> | Start standing with feet hip distance apart and lower into a squat position by bending the knees. Keep the spine straight, chest lifted, and knees behind toes. Arms are in front of the chest for                                                                                                                                           |

|                                     |                                                                                                                                                                                                                                                                                                                                                          |
|-------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                     | balance. Jump straight up and swing arms overhead. Return to squat.                                                                                                                                                                                                                                                                                      |
| <b>Star jumps<br/>Jumping jacks</b> | Physical jumping exercise performed by jumping to a position with the legs spread wide and the hands going overhead, sometimes in a clap, and then returning to a position with the feet together and the arms at the sides                                                                                                                              |
| <b>Strength</b>                     | The ability of a <a href="#">muscle</a> or muscle group to overcome a resistance                                                                                                                                                                                                                                                                         |
| <b>Stretches</b>                    | Stretching is a form of physical exercise in which a specific muscle or tendon is deliberately flexed or stretched in order to improve the muscle's felt elasticity and achieve comfortable muscle tone. The result is a feeling of increased muscle control, flexibility and range of movement                                                          |
| <b>Target games</b>                 | Target games are those in which players send an object (a ball or dart) towards a target area. Sometimes this may also involve avoiding obstacles, defending, guarding or blocking the path of the opposition's ball to stop them from scoring                                                                                                           |
| <b>Technique</b>                    | A technique is the way of performing a skill                                                                                                                                                                                                                                                                                                             |
| <b>Torso</b>                        | The main part of your body, not including your head, arms and legs                                                                                                                                                                                                                                                                                       |
| <b>Warm-up</b>                      | A warm-up should involve a gradual increase in the heart rate and breathing rate, a slight rise in body temperature, and prepare the mind and the body for physical activity. Helps to reduce the risk of injury.                                                                                                                                        |
| <b>Water safety</b>                 | <p>Always swim with a partner.</p> <ul style="list-style-type: none"> <li>• Know your limits</li> <li>• Swim in safe areas only</li> <li>• Swim parallel to the shore</li> <li>• Be careful about diving</li> <li>• Watch the sun</li> <li>• Drink plenty of liquids</li> <li>• Avoid getting too cool</li> <li>• Alcohol and water never mix</li> </ul> |
