

Nail & Beauty

Year 2

PERSONAL HYGIENE:

PERSONAL HYGIENE is of great importance in a salon. It is essential to prevent the spread of infectious diseases and because your client wants a therapist with high hygiene standards!!!

LESSON 12:

Masego comes into the salon looking very untidy – her hair is a mess, her make-up is too heavy, her clothes are the same ones she was wearing yesterday, and she does not smell very fresh.

1. What would you say to Masego if you were her boss? What do you need to tell her about her personal hygiene in the salon?

PREVENTING BODY ODOUR

Antiperspirant

Reduces the size of the pore so we sweat less

As a PROFESSIONAL you work closely with clients and salons can be warm because of facial steamers or hair dryers.

BACTERIA likes warm conditions – if you are hot and sweaty, body odour can occur !

IT'S NOT A PLEASANT SMELL

So you need to take a daily bath or shower and use **ANTIPERSPIRANT(roll-on)** and **DEODORANT.(spray)**

The difference between an antiperspirant and a deodorant?

- A deodorant acts as a mild antiseptic to mask the odour but not reduce the sweating
- An antiperspirant reduces sweating

Deodorant

It is similar to an antiseptic because it stops the growth of bacteria

Anti-septic comes in different forms – in a roll on or an aerosol bottle. When you develop an allergic reaction – STOP using the product !

ORAL HYGIENE

Bad breath is horrible ! the causes are

- ♥ Food being stuck between the teeth
- ♥ Digestive problems (stomach problems)
- ♥ Not brushing your teeth

♥ Smoking

To AVOID bad breath, you must

- ♥ brush your teeth at least twice a day
- ♥ visit the dentist regularly for check ups
- ♥ use anti-septic mouthwash or dental floss to remove food
- ♥ avoid eating garlic or strong-smelling food

CARING FOR YOUR NAILS AND HANDS

Your hands are very IMPORTANT as a beautician; they are the tools of your trade.

Cross-infection

Transfer of germs and

bacteria through poor

hygiene

Your nails are always in view, so make sure they are clean throughout the day.

Take time to care for your own nails and keep them short so you don't scratch your clients.

BACTERIA grows under DIRTY nails & LONG or BROKEN nails can scratch your client and spread INFECTIONS.

Any cuts or abrasions should be kept covered to prevent **CROSS-INFECTION**.

IMPORTANT THINGS TO REMEMBER ARE:

Dermatitis

Inflammation
of the skin

- ♥ Wash your hands before working on your client or before eating food
- ♥ Nails should be kept clean and well manicured
- ♥ Always wear protective gloves when using chemicals; this reduces the risk of **DERMATITIS**

CLOTHES AND JEWELLERY

Most salons insist that you wear a uniform and an apron – your clothes should be comfortable to wear.

Too much jewellery can catch in your clients hair – it is also a place for BACTERIA to grow and cause **CROSS-INFECTION**

- ♥ Washed and clean clothes should be worn each day
- ♥ Wear cotton-rich clothes, this allows air to flow through and they absorb perspiration (sweat)
- ♥ Avoid dangling jewellery they can scratch your client
- ♥ Avoid belts with loops, as they can get caught on furniture and cause an accident

CARING FOR YOUR FEET

YOU are on your feet for long hours every day, shoes should be COMFORTABLE, CLEAN and SMART

NO HEELS !

- ♥ I'm sure you all wash your feet regularly, but do you dry them properly in between your toes ?

Warmth and sweat encourages the growth of bacteria.

- ♥ Avoid open shoes in case you drop a sharp object like a scissor or spill hot wax on your toes as this can lead to accidents
- ♥ Use foot powder as this will absorb perspiration (sweat)

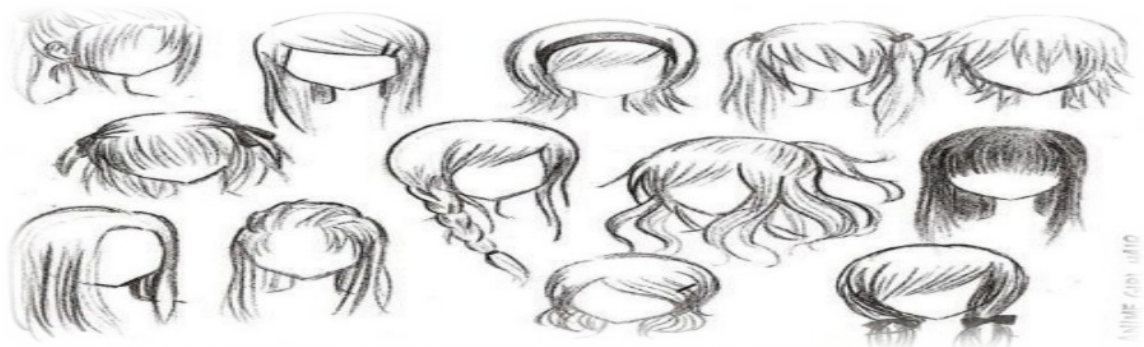

CARING FOR YOUR HAIR

You are a WALKING ADVERTISEMENT for your profession!

Keep your hair clean, in a good condition and styled

Long hair should be tied up and kept out of your face as it can cause **CROSS-INFECTION** between you and your client

Do not use other therapist UNSTERILISED equipment on your hair as it can be contaminated

LESSON 13:

1. What causes body odour?

2. What should you do to avoid bad breath?

3. What is dermatitis?

4. Why should you always have short finger nails?

5. Name five (5) things to take into consideration concerning healthy feet in a salon?

IMPORTANCE OF PERSONAL HEALTH

IT IS YOUR RESPONSIBILITY TO ENSURE THAT YOUR OWN HEALTH IS NOT NEGATIVELY AFFECTED BY THE SALON

POSTURE

Do you know what the word posture means? Write your own answer.

→ Posture is how you 'hold' yourself when seated, standing or walking.

GOOD POSTURE will help you work longer hours without getting tired

POOR POSTURE looks sloppy and doesn't give your client a good impression of you

POOR POSTURE leads to tiredness or injuries as your body weight is not evenly distributed

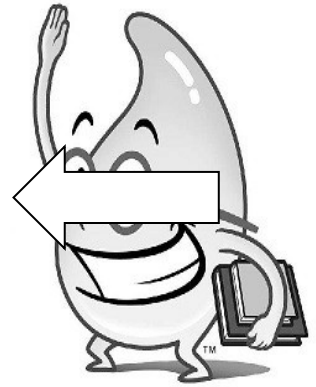

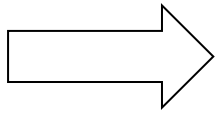

How would you describe good posture? Write down three (3) things that indicate good posture.

→ good posture include standing up straight with your shoulders back, Tummy pulled in and your chin forward

Keep your back straight when sitting down not 'folding' in the middle

Standing on both feet with your posture being balanced

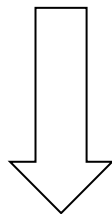

CLEAN GENE Word Hunt

Hunt through the puzzle to find the following words. Circle each one when you find it as shown below. Words can be spelled out in many different directions: horizontally, vertically or diagonally — even upside down.

Germ	Cut	Cough	Virus	Fever	Fungus
Disease	Sanitize	Clean	Sick	Exercise	Organism
Sneeze	Bacteria	Aches	Hands	Soap	Hygiene
Wash	Airborne	Healthy	Skin	Microbe	Transmission

Z S A N I T I Z E A M Y E R X J G O C H

HAND HYGIENE

- First wet your hands and apply liquid soap
- Rub your hands together and scrub all surfaces (palms, fingers & in between)
- Continue for 10-15 sec – scrubbing together with the soap removes germs
- Rinse well and dry your hands

LESSON 14:

HAND WASHING WORD SEARCH

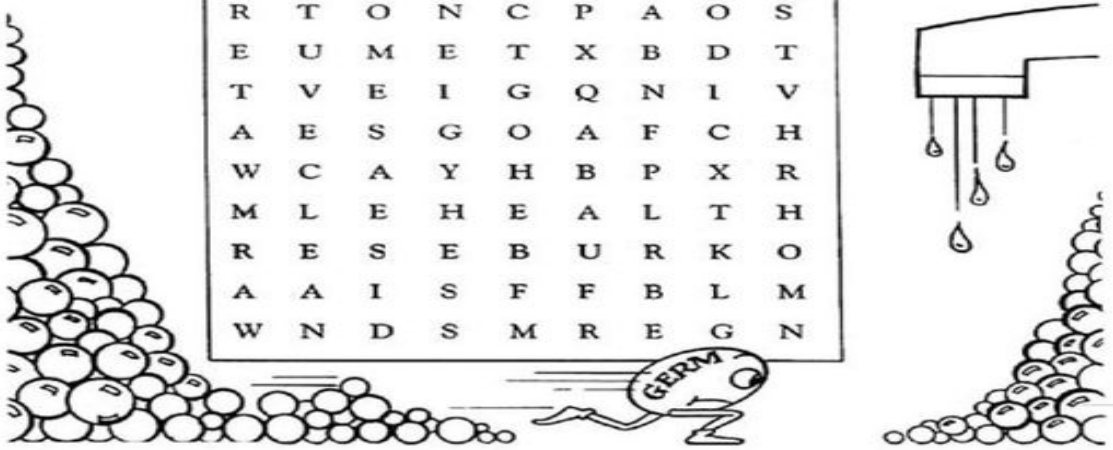

Find and circle the eight words in the puzzle below.

GERMS DISEASE SOAP

WASH HANDS WARM WATER

HYGIENE CLEAN HEALTH

O	Z	S	E	I	M	J	K	I
R	T	O	N	C	P	A	O	S
E	U	M	E	T	X	B	D	T
T	V	E	I	G	Q	N	I	V

A	A	I	S	F	F	B	L	M
W	N	D	S	M	R	E	G	N

**simcoe
muskoka**
DISTRICT HEALTH UNIT

TEETH

- You should clean your teeth twice a day
- It gives you healthy gums & prevents tooth decay
- Cleaning your teeth also freshens your breath

ARMPITS

- Everybody sweats – its your bodies way of cooling down
- At puberty you begin to sweat more
- If you bath regularly you won't suffer from body odour
- use a antiperspirant to help reduce the sweat and make you smell great

EARS

- Ears should be washed inside and outside
- Earwax can build up without cleaning it
- it is not pleasant and can affect your hearing

GENITAL AREAS

- Girls produce a mucus
- Wash the area properly to ensure it is clean
- When washing the area use mild soap and warm water

FEET, TOENAILS AND HANDS

- Our feet can be the smelliest part of our body
- Wash your feet everyday & dry between the toes
- Your hands are used all the time and come into contact with germsWash your hands regularly

HAIR

- Hair should be washed regularly
- Unwashed hair looks unprofessional and can start to smell

LESSON 15:

Answer the following questions if they are true or false.

1. You should change your underclothes every day

2. Skin temperature is the same all over _____
3. All germs are harmful _____
4. To avoid catching a cold you should wash and dry your hands regularly _____
5. You should brush your teeth three minutes after every meal _____
6. You should put your hand in front of your mouth when you Cough or sneeze _____
7. Your hands have the most germs _____

Cross out the words below

S	S	E	R	D	W	E	A
O	G	F	T	H	A	I	R
A	E	O	H	A	S	F	M
P	R	O	T	N	H	I	B

 Toe
 Washing

LESSON 16:

Answer the following questions

1. Keeping your body _____ is a very important part of keeping you healthy and helping you feel _____ about yourself.
2. How often should you take a bath or shower?

BRIT'S PERSONAL HYGIENE

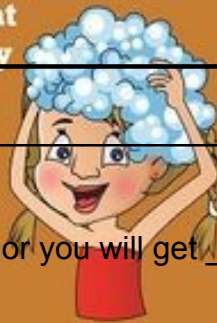

3. When you shower, make sure to use _____ to wash your body and _____ to clean your hair.

4. Why should dry yourself after a shower?

Brush your teeth
a day after
waking up
in the
morning
and
before
going to
bed at night

Wash your hairs often
keep it neat
and tidy by
brushing
and
styling
as often

5. You need to brush your hair everyday or you will get _____

- After going to toilet
- Before and after eating
- Playing with animals
- After brushing hairs
- After playing outside

6. When your underarms sweat, they give off a _____ odour.

PERSONAL HYGIENE

7. You need to brush your teeth _____ times a day and floss your teeth _____ a day.

8. Find pictures of the following products.

Deodorant / Shampoo / body wash / soap / tooth brush / toothpaste

Explain next to each picture what they are and what they are used for

TAKE A SHOWER

Take a bath or shower
at least
once a day
Change
your
underwear
daily

CHANGE YOUR CLOTHES

Wear neat and clean
clothes everyday,
change your clothes
when dirty or wet

CLIP YOUR NAILS

Keep your
nails short
and clean
at all times

Let's have some fun and compare answers

Ask the Right Questions

To be able to compare answers, the class should all ask the same questions. Here are some suggestions.

Personal details

1. Sex : Male ☐ Female ☐
2. How old are you:
☐ Under 13 (child)
☐ Between 13 and 18 (adolescent)
☐ Between 18 and 60 (adult)
☐ Over 60 (older person)

Body hygiene

3. Do you take a shower / a bath:
☐ every day
☐ every other day
☐ occasionally
4. After the shower/the bath, do you:
☐ change your clothes
☐ put back on the same clothes
☐ always use soap
☐ wash with water only
5. In the bath / the shower, do you:
☐ always use soap
☐ wash with water only

Clothes hygiene

6. Do you change your clothes:
☐ every day
☐ twice a week
☐ occasionally
7. Do you change your underclothes:
☐ every day
☐ twice a week
☐ occasionally

Hand hygiene

8. Do you wash your hands ☐
☐ before every meal
☐ when they are dirty
☐ after going to the toilet
☐ after blowing your nose
☐ when you come home
☐ not very often

9. Answer Yes / No to the following statements:

- . I wash my hands with soap_____.
- . I lather with soap for at least 30 seconds_____.
- . I wash my hands in cold water_____.
- . I wash my hands in warm water_____.
- . I always dry my hands with a clean and dry towel_____.
- . Everyone in my family has their own towel _____.
- . I cut my nails regularly_____.

Nasal hygiene

10. When you blow your nose, do you use:
☐ a paper handkerchief
☐ a linen handkerchief

Client Card : Hands & Nails

DATE:

NAILS:

- NORMAL
- BRITTLE
- DRY
- WEAK
- RIDGED

CUTICLE:

- DRY
- SPLIT
- OVERGROWN

SKIN:

BONES AND MUSCLES OF THE HAND & FOOT

BONES OF THE HAND

BONES OF THE HAND/BENE VAN DIE HAND

The **RADIUS** and the **ULNA** are the two long bones of the forearm.

The **ULNA** is situated on the little finger side (**PINKY**) of the arm.

There are eight **CARPAL** bones in the wrist.

The palm is called the **METACARPALS**. **METACARPALS** are different in lengths and each one moves with one of the five digits (fingers and thumbs).

Fourteen small bones make up your fingers These bones are called the **PHALANGES**

MUSCLES OF THE HANDS

Hand Muscles

1. Abductor

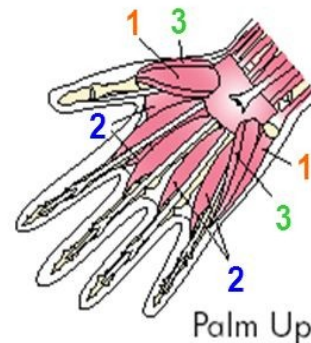

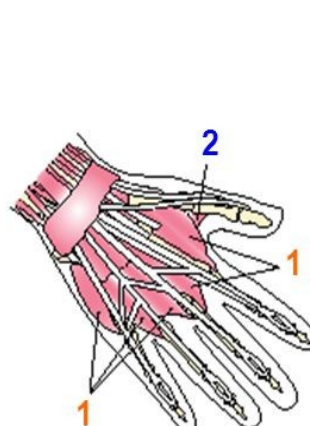

separates fingers

2. Adductor

draws fingers together

3. Opponens

give the ability to grasp or make a fist

- Abductor

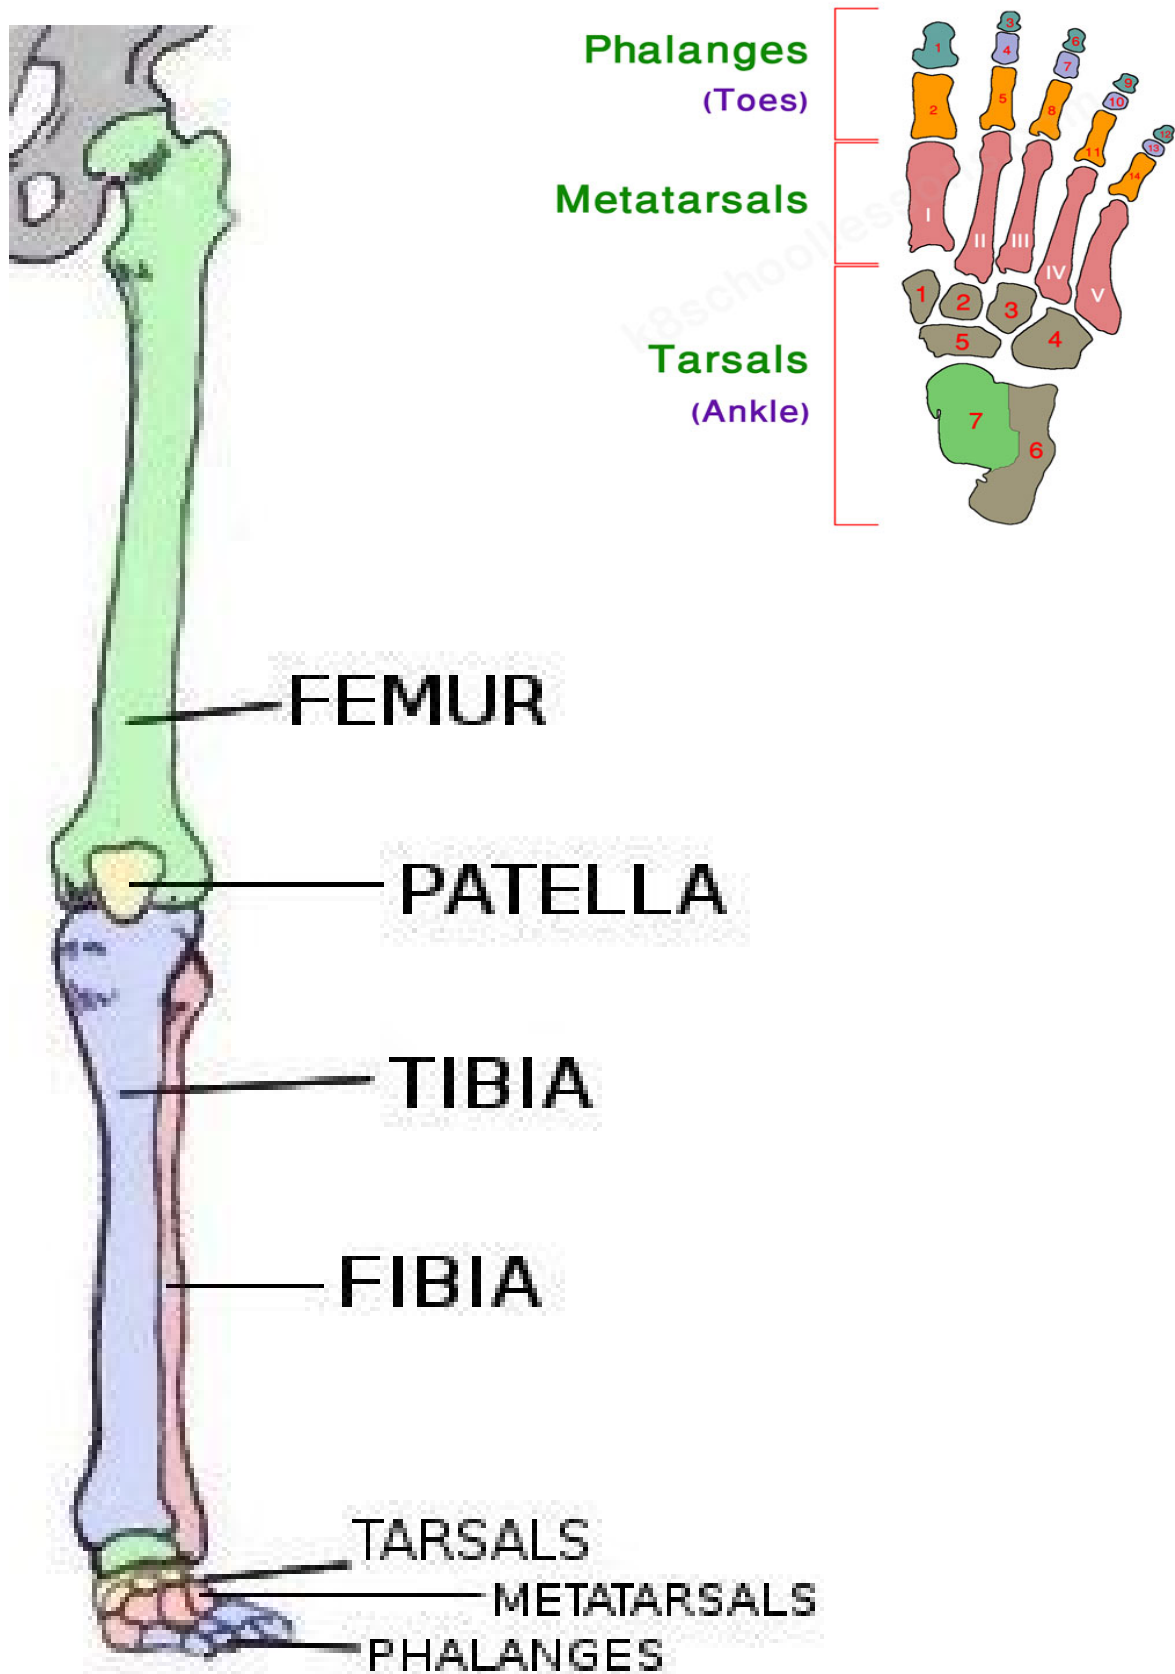

- Adductor

LESSON 17:

Make your own x-ray of your arm and hand, and you need to label the different parts

BONES OF THE FEET

BONES OF THE FEET

The **TIBIA** and **FIBULA** are the two long bones in the lower leg.

The **FIBULA** is situated on the little toe side of the leg.

The **TIBIA** is your shin.

The ankle is made up of 7 bones called the **TARSALS**

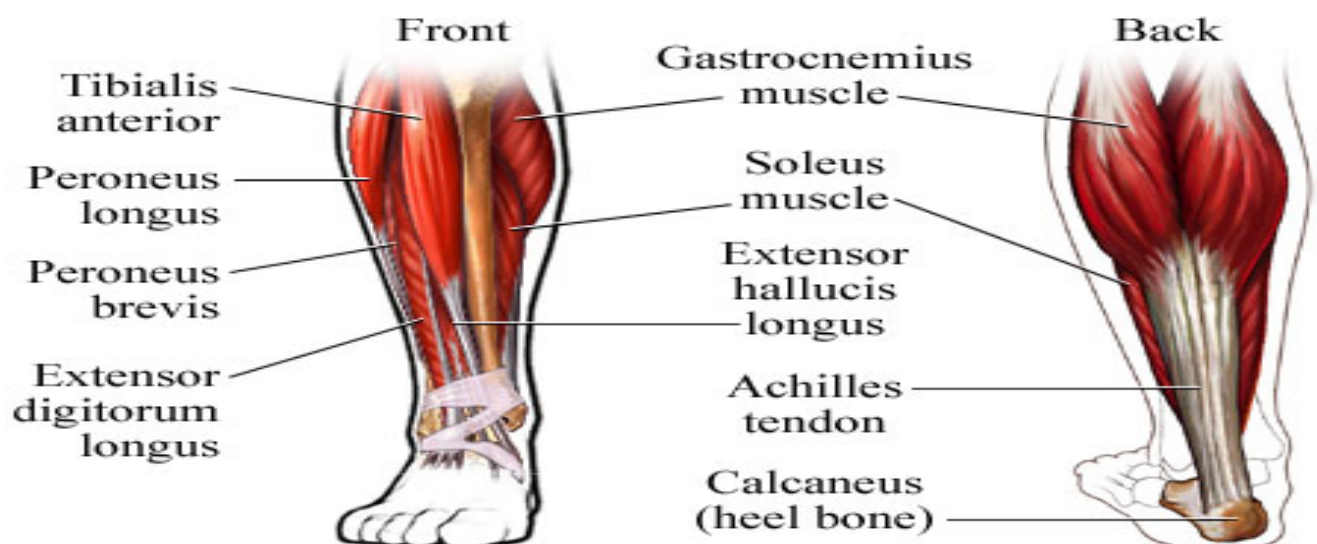

The bridge of your foot is called the **METATARSALS**.

There are fourteen phalanges. These are the small bones which make up the toes.

MUSCLES OF THE FEET

The muscles of the foot are responsible for supporting the arches of the feet, curling and flexing the toes and assist with the walking process

- The **GASTROCNEMIUS** –helps the body in walking and running. Pull foot downwards
- The **TIBIALIS ANTERIOR**–bends the ankle to pull the foot up towards the leg. Pulls foot upwards and turns it inward
- The **SOLEUS**–Points the toes. Pulls the foot downwards_____

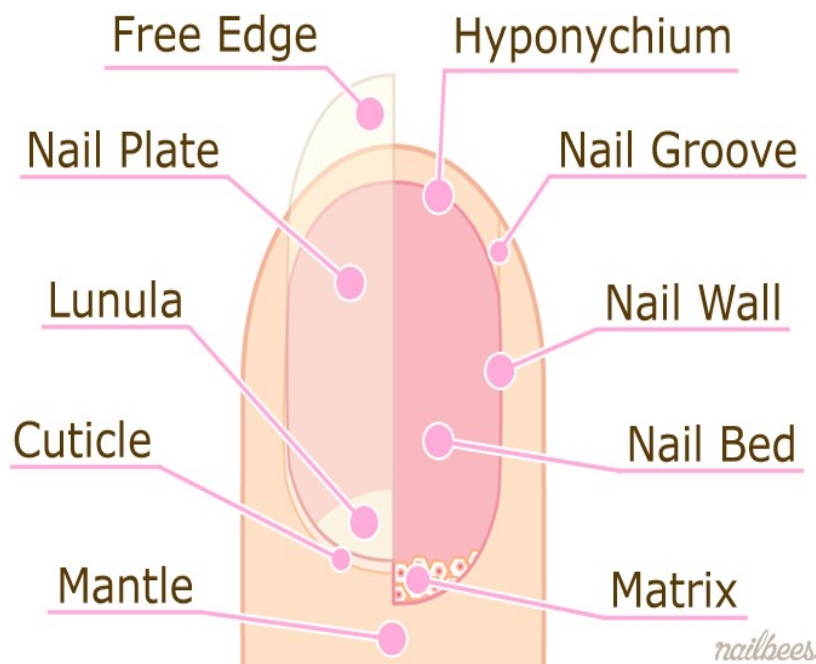

LESSON 18:

DRAW the foot and label the different parts.

NAILS AND CUTICLES

- ♥ The part of the nail that can be seen and touched is composed of dead skin cells
- ♥ The skin-like layer at the base of the nail is called the CUTICLE
- ♥ Our nails protect the sensitive part of our fingers and toes
- ♥ Without proper nail care they become weak, ingrown or infected
- ♥ Growth rate is 1mm per week

Nail outline

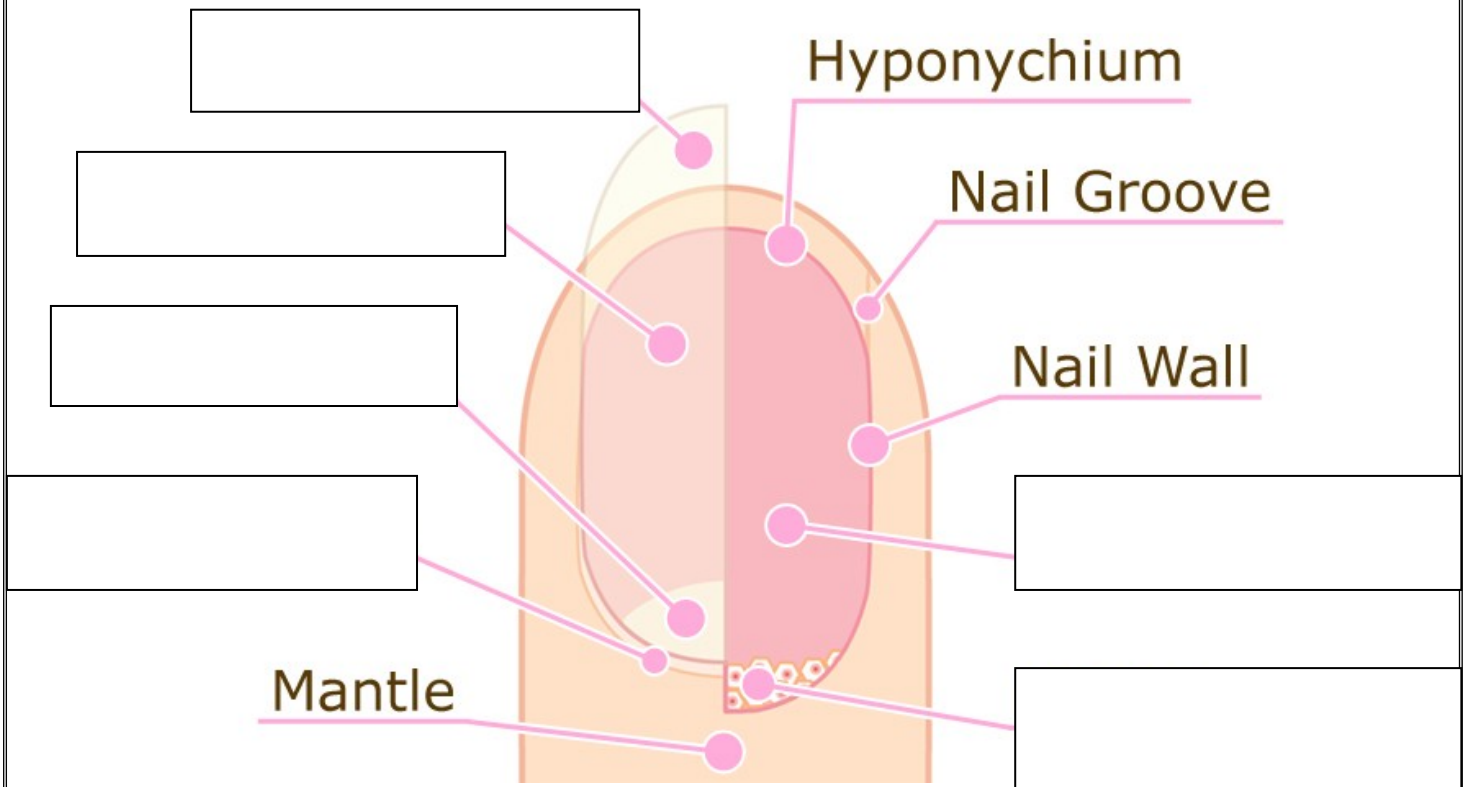

Nail structure

NAME	DEFINITION
1. Free edge	♥ Extends past the skin
2. Nail bed	♥ Blood circulation is responsible for the pinkish colour
3. Nail wall	♥ They help to keep the nail in place, it's the skin on both sides of the nail
4. Lunula	♥ It is the only visible part of the matrix, it is the half-moon on your nails
5. Matrix	♥ It is the part where your nail starts to grow, it is under your nail bed
6. Cuticle	♥ It protects the matrix and grows continually
7. Nail plate	♥ It is the body of the nail, the part that

LESSON 19:

1. Label the structure of the nail

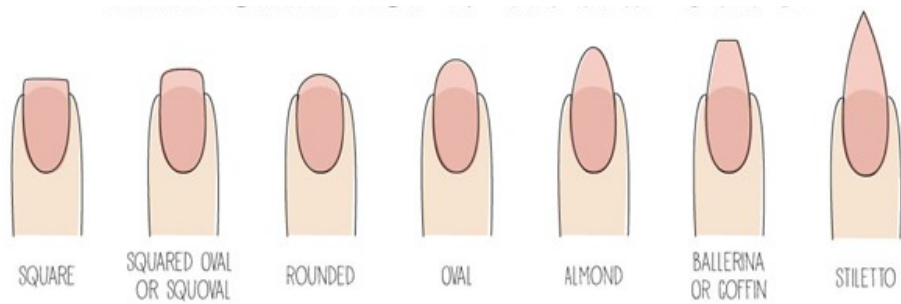

2. Answer the following questions

2.1 What part of the nail extends past the skin?

2.2 Where does the nail start to grow?

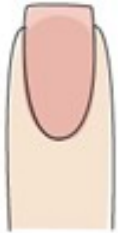

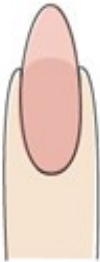

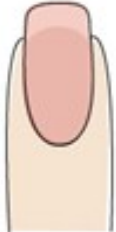

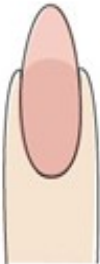

2.3 What part of the nail do we apply cutex?

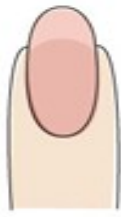

NAIL SHAPES

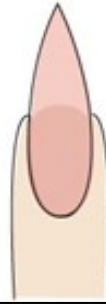

LESSON 20:

1. Identify the nail shapes below and label them

 1.	 2.
 3.	 4.

5.

6.

7.

2. Find pictures of at least 3 different nail shapes.

3. Decoupage the different nail shapes

pointed

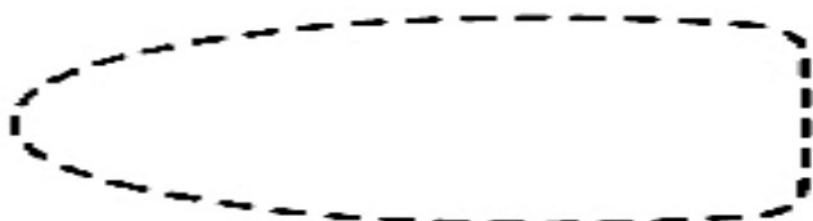

round

squoval

square

oval

NAIL DISORDERS_

**White dots in
Fingernails indicates
possible zinc
deficiency**

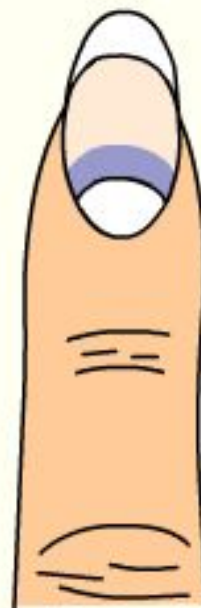

Split in the nail means that
you don't have enough
stomach acid to digest
food

Yellow colouring of the nails can
be a smoke stain or
discoloration due to nail varnish
or fungal infections

or liver problems.

Blue around the lunula
means circulation
problems

problems

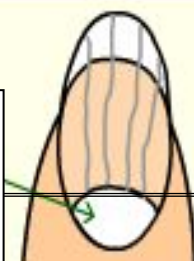

Red around the lunula
indicates possible heart
problems

Red skin around the
nail indicates a
possible infection
around the cuticle.

The moon indicates a healthy thyroid –
the more moons which are missing the
more weak the thyroid is.

Vertical ridges are
possible iron deficiency –
can cause anemia (tired

Ringworm of the Toenail

Cause - Vegetable fungus. Usually the result of nail injury and then infection occurs.

Appearance - 3 forms:

- a) White patches that can be scraped off the nail surface.
- b) Long yellowish streaks within the nail.
- c) Disease spreads from the free edge to the matrix. You will notice the nail plate starts to lift and thicken.

□Clare Hargreaves-Norris

Bacterial Infection - paronychia

Cause - Picking the skin at the side of the toenails, or a break in the skin becoming infected. It often accompanies ingrowing toenails.

Appearance - Inflammation, redness and pus occurs in the tissue.

□Clare Hargreaves-Norris

Verruca

Cause - Viral infection.

Appearance - Small circular core that is flat and will often have black dots in its centre, it can sometimes be white around the edges. It indents into the sole of the foot.

□Clare Hargreaves-Norris

Psoriasis of the nail

Cause - No real cause is known. It is thought to be hereditary or stress related.

Appearance - Psoriasis of the nail will appear as pitting or thickening of the nail plate, beaus lines - horizontal ridges in the nail plate and possible lifting of the nail plate.

□Clare Hargreaves-Norris

Fungal infections-

Both fingernails and toenails are susceptible to the infection, which usually manifests as discoloration and thickening of the nail and crumbling edges. The condition most commonly occurs in toenails.

Who gets nail fungus infections?

- Nail fungus infections are more common in men than women and in the elderly than the young
- one's risk of nail fungal infection include the Slow growing nails
- A family history of fungal infection (genetics)
- Heavy perspiration
- Humid or moist work environment
- Wearing socks and shoes that prevent ventilation
- Walking barefoot in damp public places (swimming pools, gyms and shower rooms)
- Previous injury or infection to the skin or nail
- Tight footwear with crowding of toes

Bacterial infection

- Injury or infection to a finger
- Infection can range from mild to potentially serious. Often these infections start out small and are relatively easy to treat. Failure to properly treat these infections can result in permanent disability or loss of the finger
- Early recognition and proper treatment of the following main finger infections will help prevent most of the serious outcomes
- **Paronychia** is an infection of the finger that involves the tissue at the edges of the fingernail. This infection is usually superficial and localized to the soft tissue and skin around the fingernail. This is the most common bacterial infection seen in the hand.

- Bacterial infections – how would you know you had a bacterial infection? Number one, it probably would hurt. It would cause you pain. There would be drainage. The nail bed itself would be red. There may be some whiteness around the nail indicating there's pus. If you have a bacterial infection, it needs antibiotics.

LESSON 21:

Draw any 5 of the nail disorders

MASSAGE SEQUENCE

FOOT MASSAGE

Choose a partner and demonstrate a basic foot massage:

- Warm lotion in your hands.
- Stroke firmly up to knee X6
- Use a kneading movement up the muscle to knee and drag down
- Use fingertips and knead the muscle at the back of the leg up
- Make circles around the ankle bones with fingertips X3.
- Top of foot, make small thumb circles
- Place thumbs on bottom of foot, make small circles, or scissoring movements.
- On toes use thumbs to knead and pull toes gently.
- Support ankle and rotate foot X3 clockwise and anti-clockwise
- Gently flex and extend the foot X3
- Finish with stroking movements x6.
