Code of Conduct

Dear student, parents/guardians

Arts and Crafts consists out of four years containing Term 1-4.

Assessment consists out of informal and formal work that will take place throughout the year.

All assessment tasks **MUST** be completed each term.

INCOMPLETE WORK NOT SUBMITTED will result in poor performance marks.

Absenteeism: It is your responsibility as learner and guardian to inform the educator if you have missed an assessment. Doctors/funeral letter will be required for **FORMAL ASSESSMENT TASKS** when missed.

Workbooks containing informal and formal work will stay at school but if a guardian want to see the work he/she is welcome to make an appointment with the educator or the educator may make copies of the learner work and sent it to the parent/guardian.

Stationery and Art Media: School will provide this but if any of the materials disappear or get lost, you as a parent/guardian need to replace the object that was lost.

Behaviour

- No late coming will be tolerated and may result in detention.
- Enter the class, go to your desk, place your bag on the floor; greet the educator.
- Carry on with the assessment or wait for instructions from your teacher.
- Do not talk or disrupt the class and have respect for yourself and others.
- Do not interrupt the teacher when she is teaching.
- No foul language (swearing and nastiness) and assaulting will be tolerated towards each other and may result in detention.
- Cover your mouth when you cough and sneeze and throw away all tissues or toilet paper in the given dustbins.
- Use the words Please and thank you often.
- In the need of asking questions, put up your hand and wait for permission to talk. Do not interrupt other learners asking a question and do not scream out answers and comments.
- No eating and drinking in the class.
- Greet educators, parents/guardians, principal or any other grown up who enter the class.
- Store artwork and material in designated locations and clean up after yourself.
- All cleanings must be done at the end of each period.
- At the end of a period after the bell has rung or your educator will give permission for you to pack up; clean up and leave the class row for row without disrupting teaching in any other classes where teaching is taking place.
- Your hands had to be washed after break. Do not come to class and ask permission then because we respect teaching and learning time.

Name and surname of learner: _____

Signature of learner: _____

Name and surname of the parent/guardian: _____

Signature of parent/guardian: _____

Date: _____

Signature of educator: _____

Chapter 1

Topic 3

Visual Literacy

1. Safety in and around the classroom

At the end of this lesson, the learner should be able to:

- Know safety in and around the classroom
- Classroom rules
- Follow rules
- Complete the activity sheet

ART ROOM RULES

**EVERY STUDENT HAS THE RIGHT TO LEARN.
NO STUDENT SHALL INTERFERE
WITH ANOTHER STUDENT'S RIGHT TO LEARN.**

1. No talking while the teacher is talking
or while another student is responding.
2. Follow directions the first time that they are given.
3. Use materials in the art room safely
and as they were intended to be used.
4. Stay seated unless you have permission
to do otherwise.
5. Students are expected to work quietly.
6. Ask 3 before me.
7. Keep hands, feet, and objects to yourself.
8. Students are expected to be respectful,
responsible, and motivated to do their best.
9. Artwork stays in your portfolio
and out of the trashcan!

If it becomes apparent that these rules
need to be adjusted or modified,
the art teacher will make the final decision.

1.1 Cleaning the Art and Crafts Room

- **Clean up** after yourself and **put things back** where they belong (which should be where you found them). Keep the work area and floor area clean, tidy, clear, and organized. Push chairs under the tables.
- After handling dangerous or dirty items, **wash** your hands with soap and water (for at least 10 seconds). Do so even if you were wearing gloves.
- **Properly dispose** of trash and waste. Recycle paper!
- Sinks are to be used **only** for water and water-based liquids, as approved by the teacher. **DO NOT** put anything solid in the sinks.

1.2 Accidents

- Stand up when doing practical work in order to move away quickly if needed.
- If you are scalded, burnt or a chemical splash on your skin, wash the affected part immediately with lots of water. Report this, and any cuts or abrasions to the teacher without delay.
- **Immediately report** any accident (spillage of any substance), breakage, malfunction or unsafe condition to the teacher, no matter how small. **DO NOT** clean up spills without direction. **DO NOT** handle broken glass. **DO NOT** attempt to “fix” anything.
- **Know the location** and proper use of all safety equipment (especially fire extinguishers and fire blankets), alarm systems and exits.

<https://www.esedirect.co.uk/articles/post/get-crafty-a-traffic-cone-as-you-ve-never-seen-before.aspx?>

1.3 Safety Guide for Art Studios

An artist's craft has the potential to affect his/her health. If not properly used, art materials and processes can cause physical injury or illness or initiate fires. It is essential for artists to understand studio hazards and how to protect themselves and those working around them.

1.4 Chemical Hazards

It is very important that you must understand the hazards inherent in the art materials you use such as **toxic content, flammability, and reactivity**, and the appropriate precautions to protect against illness or injury.

1.5 Product Labels

All chemical products must be labelled with an appropriate hazard warning which may include words such as **DANGER, WARNING, or CAUTION.**

Is for products that have serious health or safety hazards, such as being highly toxic, or flammable.

WARNING and CAUTION

These are used on less hazardous substances.

“Nontoxic” may also contain chemicals for which there are no chronic toxic data.

Use all art products with care!

1.6 Fire Hazards

- Common art materials that may cause a fire include flammable or combustible solvents, oily rags, chemical oxidizers and compressed welding gases.
- Improper use of solvents causes most art-related fires.
- Flammable solvents should be stored in a storage cabinet designed for flammable materials.

1.7 Physical Hazards

- It includes injury arising from carelessness and inattention.
- Wet and slippery floors and work surfaces may lead to physical injury.
- NEVER run or chase fellow students around!
- Know your school's safety rules and follow it!

1.8 Ventilation

- Ensure proper ventilation. Make sure windows and doors are open to allow enough fresh air to circulate.
- When using spray paint or strong solvents, work outside.
- Use a fan to circulate airflow if necessary.

1.9 Protective Gear

All students should wear an overall to prevent soiling of clothes.

a student.

- It is considered a serious offence to smear or splash paint, dirty water or any other agent or solvent on a fellow student.

Craft paint contains strong pigments that may not wash out and damage clothes permanently.

- A student guilty of the above will be liable for the damage and his parents will be informed. He will be sent to the office and an incident report will be put in his file.
- Gloves and safety goggles or glasses should be worn when working with agents that can damage the skin or eyes of

1.10 Emergency Preparedness:

Studios should have fire extinguishers and first aid kits close at hand.

Know where this equipment is located and how to use it. Get to know the appropriate emergency response.

Activity 1

The teacher must instruct and make sure that at the end of this activity, learners do the following:

- Match pictures with the safety guidelines.
- Complete number 1 and cut it out and paste it in your workbooks.
- Remember to fill in the Date.
- Collect pictures on safety rules from the internet, pamphlets, magazines, etc.
- Do research work and make a collage.
- After completing number 2 of this activity, you will cut it out and paste it in your workbooks.
- Create a poster on safety rules on a A3 page.
- Do not write your answers in this book because other learners have to work in it

Activity

At the end of this activity, the learner will be able to:

- Understand the safety rules will help you to keep safe in an art and crafts room.
- Know what the effect will be on your body if you do not adhere to the rules of a classroom.

Activity 1

The teacher must guide learners to follow the instructions below to create a poster on awareness of safety in the art centre.

Use the given information as a guideline.

Your educator will hand a poster chart to you on which you will draw and write.

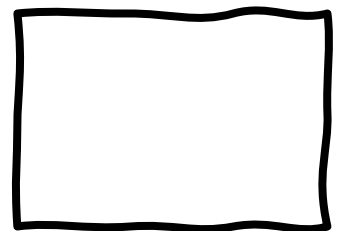

Name the poster: Safety works in the Art Centre

Think about how safety works in the Art centre.

Discuss this in a group, before creating the poster.

After completing it show and tell what you have done.

Do not write in this book because other learners must use it next year

Activity 2

Every learner and parent must agree to these rules.

Do not fill in and sign the form in this book.

Your educator will hand you this as a document where you and your parent/guardian need to sign.

Please sign the following Safety Agreement:

Learner:

I have reviewed and understand the **Safety & Responsibility Rules** and agree to abide by them.

Print name) (Signature) (Date)

Parent or Guardian:

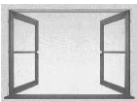

I have reviewed the **Safety & Responsibility Rules** and agree to support my child and the teacher in maintaining a safe and orderly workshop environment.

name) (Signature) (Date) (Print

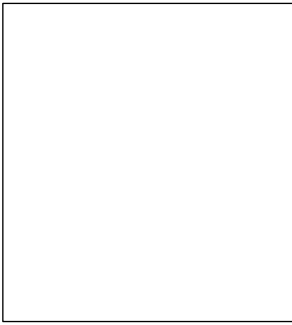

1. 2 Match the pictures of the safety guidelines in Column A, with the description of the safety guidelines in Column C.

Write the correct answer: (a, b, c, d, e, f, g, h, i, j) in Column B:

The teacher is to make sure that learners do not complete in the textbooks because other learners need to use this book next year as well

Column A Pictures of safety guidelines	Column B Answer	Column C Description of safety guidelines
1.1 		a. Slippery floor
1.2 		b. First aid
1.3 		c. Toxic / poison
1.4 		d. Flammable
1.5 		e. Protective clothes
1.6 		f. Eye protection
1.7 		g. Fire extinguisher
1.8 		h. Warning / Caution
1.9 		i. Lung protection
1.10 		j. Ventilation

1.2 Research

Instruct learners to do the following:

Find pictures of safety guidelines applicable to the art room and make a collage on the template the teacher will hand to you.

After you have completed the activity paste this work in your classroom book and write the heading Research in as well as the Date.

Pictures can be found in magazines, newspapers, and the internet.

2. Art Elements

At the end of this section, learners will be able to:

- Know art elements: line, shape, colours, ,tints and shades and know how to apply it in the arts,
- how to apply the elements and principles in activities the teacher will give you.
- Know the design principles
- Apply all art elements and design principles practical in activities the educator has handed out.

2.1 The following art elements will be explored this year.

Colour: Primary, Secondary, Tertiary, Monochrome and Warm and cool colours.

Line: The eight basic lines

Shape: All types of shapes

Texture: Different kinds and how to draw it

2.1 Line

<https://www.youtube.com/watch?v=DQEVllmeWH4>

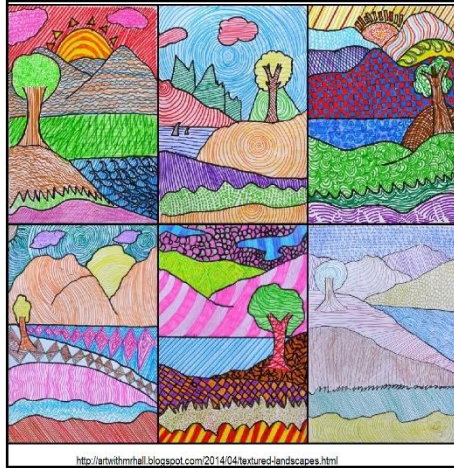

- Line is a dot on the move
- It has an endless number of uses in the creation of art.
- Line can control a viewer's eye.
- It can describe edges.
- It can indicate form as well as movement.
- It can also indicate value and a light source in drawing.
- When line is used for value or shading, we most typically see it used in the form of hatching or cross hatching.
- Although these are arguably the most common forms of using line for adding value, there is an endless number of ways that it can be used.
- Study the image below and familiarize yourself with the different kinds of line we have in art.

Activity 2

Creating a landscape using line

Guide learners to do the following:

- Study the pictures and decide how your picture will look like.
- Create your own line drawing in your art dairy but you may not use the same samples.
- It needs to include all the types of lines you have talked about.
- You may use coloured pens, pencils and different H, B and HB pencils.
- Your landscape must be clear in showing different lines and must be colourful.

Mediums to be used

Art journal
Sharpies or permanent markers
Wax crayons

Pencils
Colouring pens
Coloured pencils

Koki's
Paints

2.2 Shape

There are two basic shapes: Organic and geometrical shapes

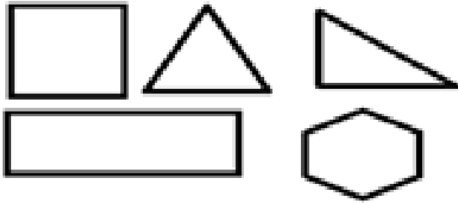

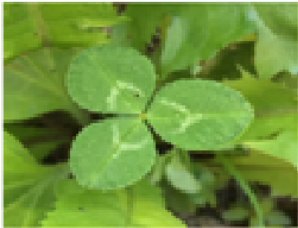

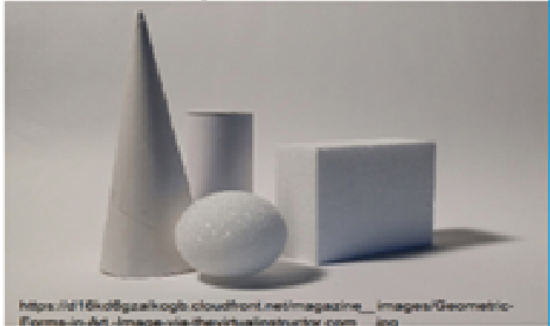

a) Organic Shapes

Organic shapes are figures that have a natural look and a flowing, curving appearance.

Different from geometric shapes, they are often also referred to as curvilinear or free form shapes, as they can be made of angles, curves or both.

b) Geometric Shapes

Geometric shapes come from **geometry**, which is the math of shapes made of points and lines. **Geometric shapes** are shapes made out of points and lines including the triangle, square, and circle. Other shapes are so complex that it takes math in order to create them. These shapes are the opposite of organic shapes

Shape	&	Form
Is usually 2D Drawn on a flat surface Has length and width		Is 3D Has length, height and width
Geometric Regular and mathematical		Actual Sculptures
		
Organic Irregular and free flowing Often found in nature		Implied Found in drawings
 		

Activity 3

Learner notes

Guide learners through the following activities:

- In activity 3.1 you will be able to identify shapes and forms and how these shapes and forms makes up an image.
- You will study these shapes and forms and answer the questions on activity 3.1 in the table the educator has provided to you.
- Write in the date you started this activity.
- In activity 3.2 you will be able to draw an animal using a grid.
- Choose the animal out of the pictures the teacher gives you.
- Use that image and draw a grid on top of it.
- Go to the grid page and number the grid page the same as you have done on your example.
- Use a pencil to draw the picture onto the grid paper going through a step-by-step selection on what to draw and copy from each named grid number and column
- Wait for your teachers' instructions

3.1 In the following four pictures shapes were used.

- Write down all the shapes you see in the picture of the lion, parrot, wolf, and small bird.
- This activity needs to be done in the classroom workbook.
- Draw a grid where you will discuss both the organic and geometrical shapes.
- Your grid should look like the grid below.

	Parrot	Horse	Design picture
Geometrical Shapes			
Organic Shapes			

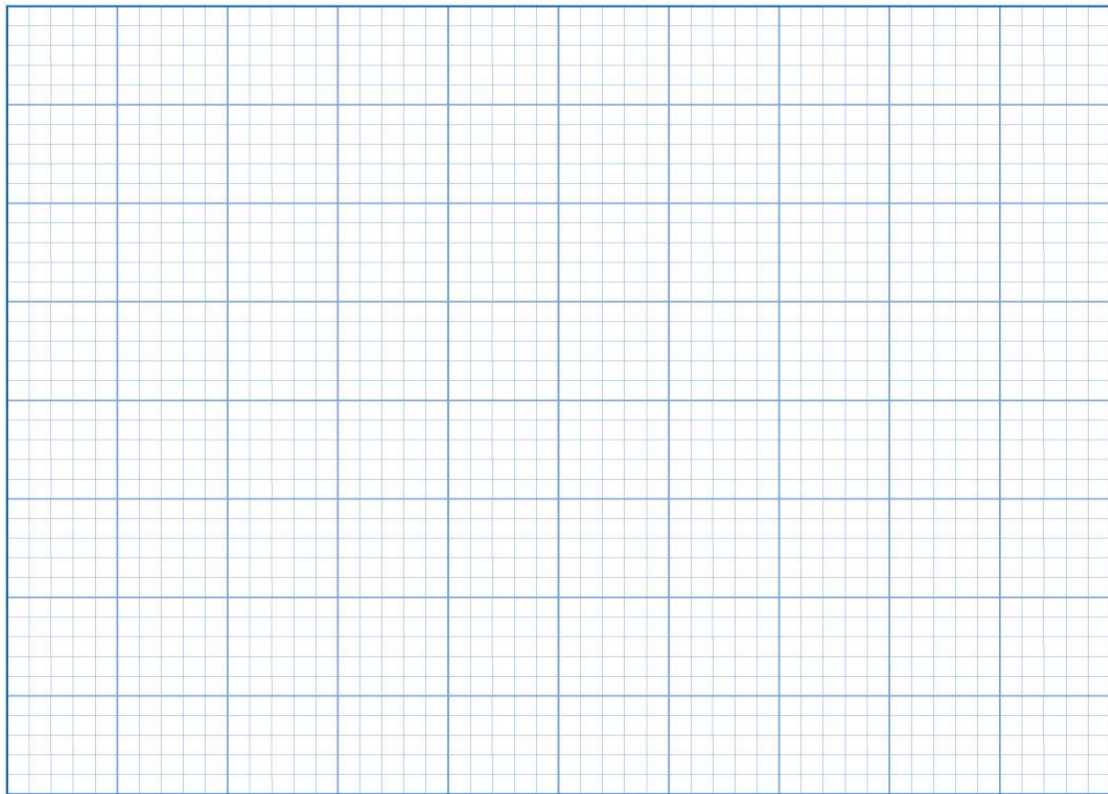

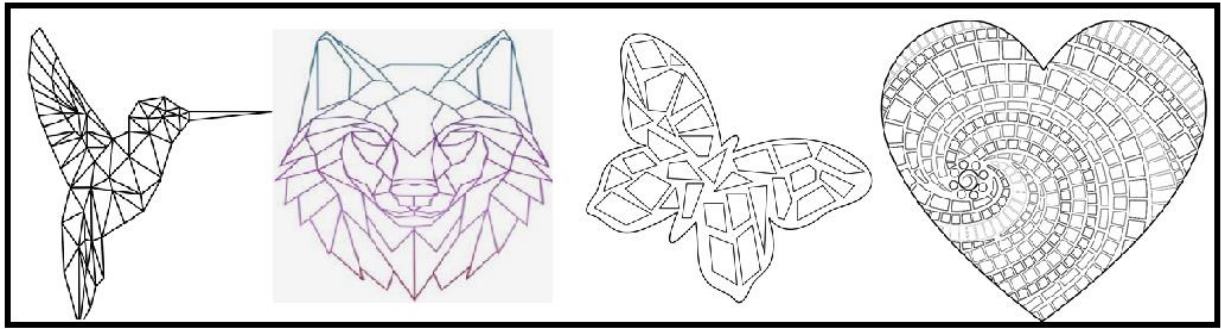

2.2.1 Choose one of the following pictures.

Copy the picture on a grid paper that your teacher will give to you.

Redraw the picture then on a A4 page that you will receive or do this in your art portfolio.

Colour the picture in vibrant colours.

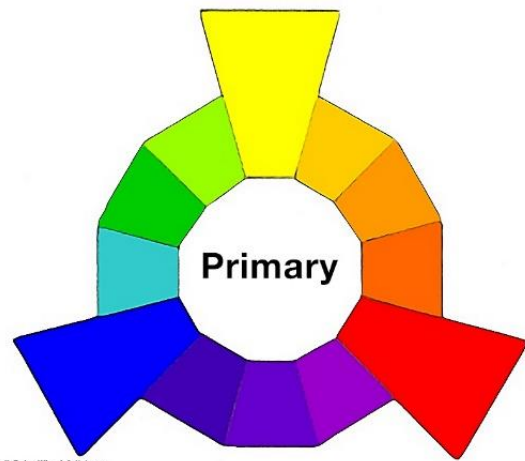

2.3. Colour

At the end of the lesson, learners will understand colours and how to mix it.

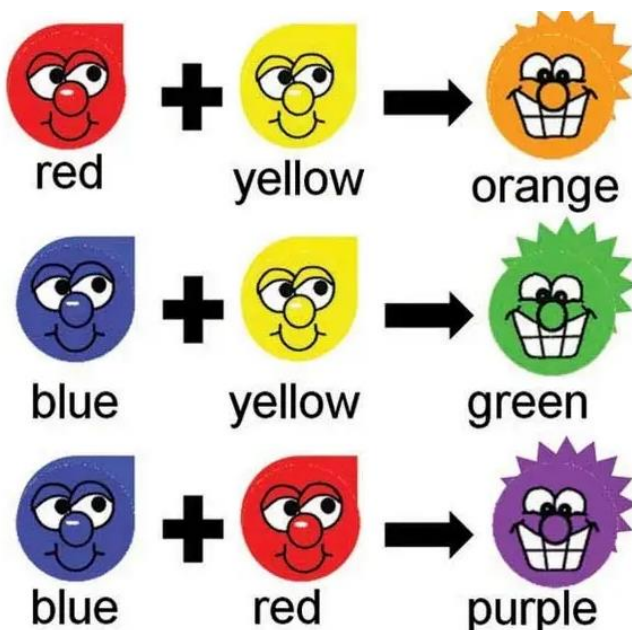

Guide learners through watching a video to understand what colour schemes are and how to use them.

2.3.1 Primary colours

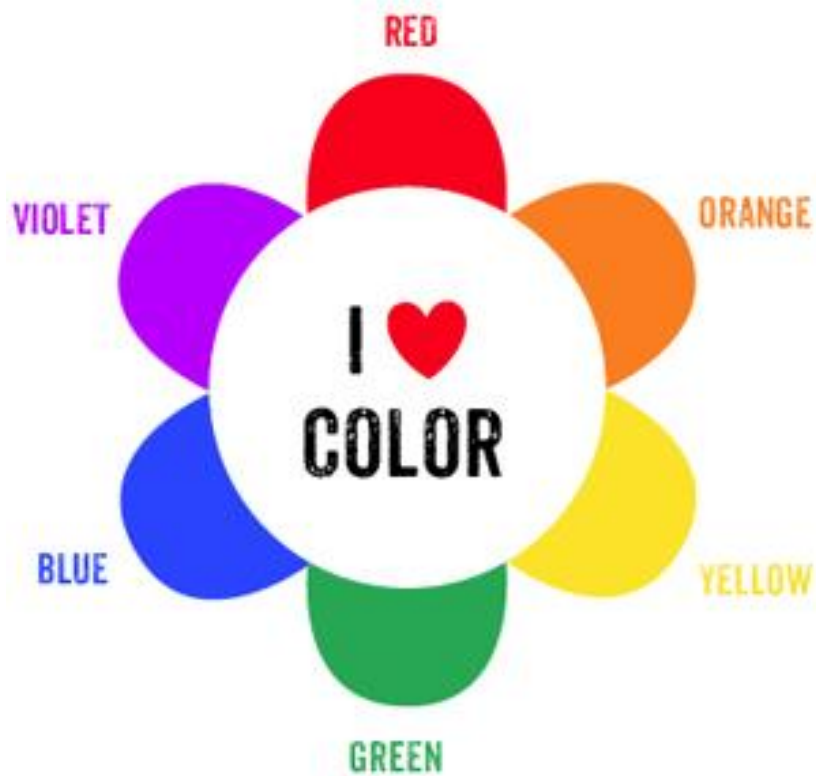

- Primary colours consist of the paint pigments of blue, yellow, and red.
- These pigments cannot be created from any other hues, hence why they are named "primary" which is defined as first or of highest rank.
- No matter how hard you try, there is no possible way to create primary colours. In reference to paint hues, blue, yellow, and red are unique, but mixing two of the primary colours can then create a secondary colour.

2.3.2 Secondary

When we mix two primary colours together, secondary colours are formed.

2.3.3 Tertiary Colours

Tertiary Colours:

Tertiary colours come about when mixing a primary and a secondary colour, opening up many different shades of a particular colour.

Note:

Purple can also
be referred to as
Violet

2.3.4 How About Brown?

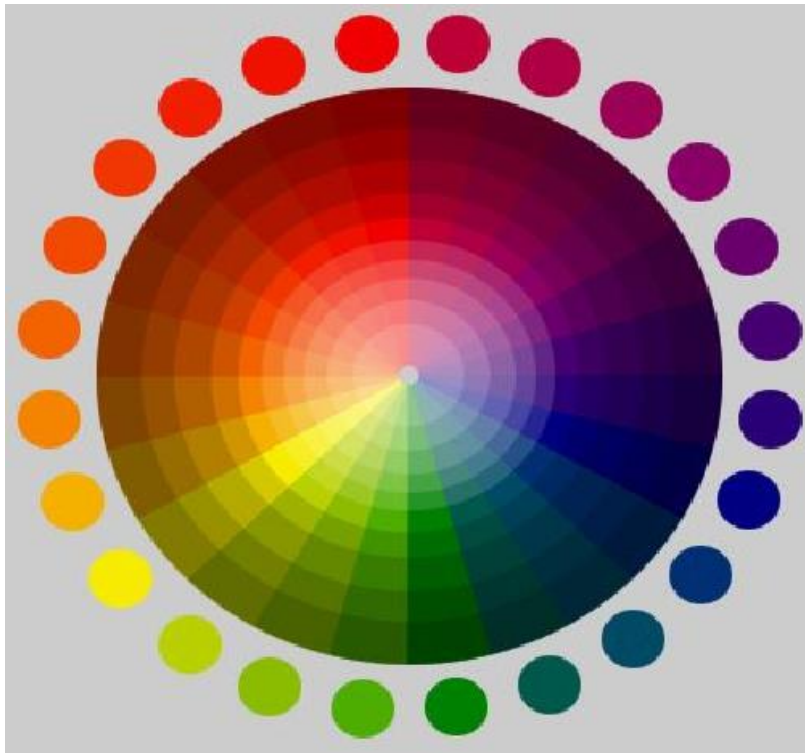

- Brown can be created by mixing all primary colours, which as mentioned earlier, is red, blue, and yellow.
- Once all the primary colours are mixed together, it creates a brown hue and depending on the type of brown desired, more red, blue, or yellow paint can be combined to make different hues of brown.
- Add more yellow to create a goldenrod colour or add redder to get a maroon colour. Secondary colours can be added to the brown as well to create other brown hues such as adding orange paint to brown can create a cinnamon colour.

image by Monica Gunderson

2.3.5 Tints and Shades

- A **HUE** refers to the dominant colour family of the specific colour we're looking at.
- White, Black and Grey are never referred to as a Hue.
- Black and white in painting terms or colour theory, are not considered as "colours", instead they are defined as "light" (white) and "shade" (black). Thus white paint "lightens" a colour creating a tint or the mixture of a colour with white.
- When white paint is added to any given colour whether it is a primary, secondary, or tertiary, it will increase the lightness. This lightness then desaturates the hue, making it less intense.
- Tints are commonly referred to as "pastel colours" and create a soft or calm colour.
- Only a tiny bit of white needs to be used in order to tint any colour, too much white may create a colour that is lighter than expected.
- If so, just add the colour desired to "darken" it to the desired hue. For example, when trying to create pink, mix white paint with red.
- If it turns out too light, add more red until it is the adequate hue.

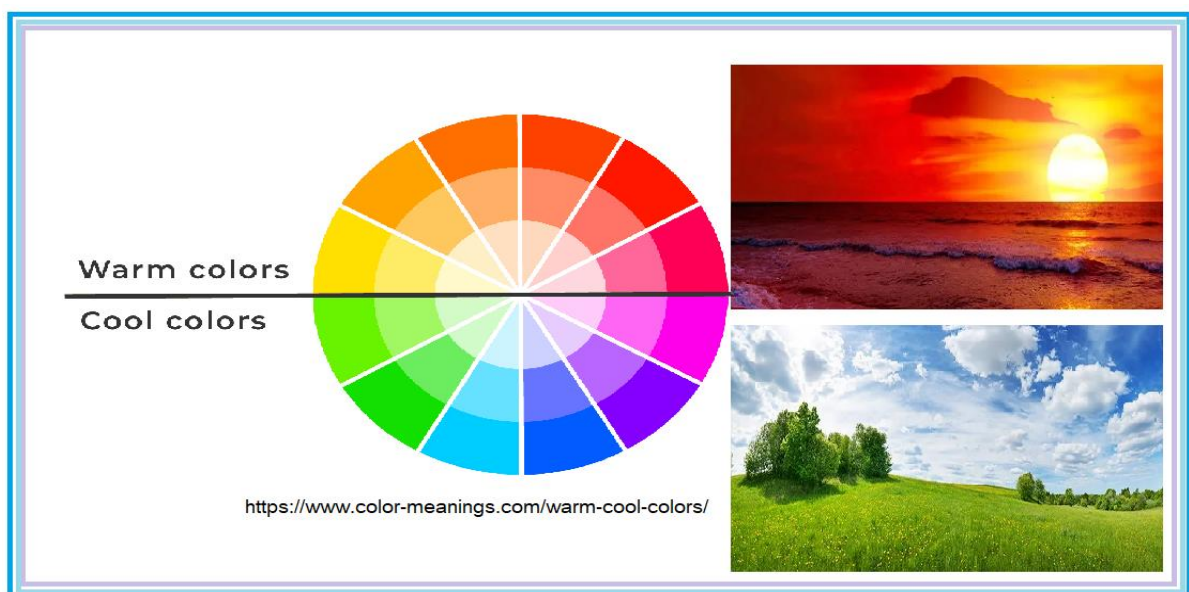

<https://i.pinimg.com/564x/66/60/2e/66602e267be198544af42d3e6e13ae4a.jpg>

2.3.6 Warm and cold colours

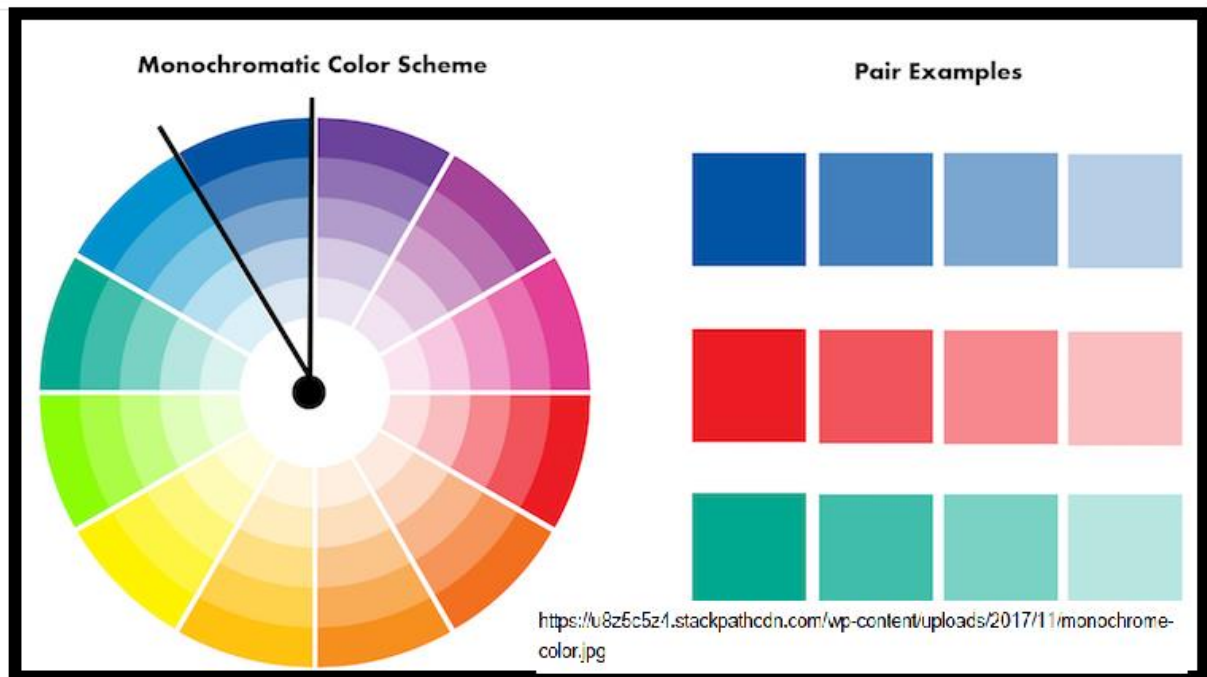

Warm colours lets one think of the sun and cold colours let one think about the sea or water.

2.3.7. Monochrome colours

Mono means one. So monochrome means then one colour with different tints and shades of the same colour.

A monochromatic object or image reflects colours in shades of limited colours or hues. Images using only shades of grey are called grayscale or black-and-white.

Activity 4

At the end of the lesson, learners will be able to:

- Understand the colour wheel.
- Know how colour works.
- Understand colour mixing either through the usage of paint or water colouring pencils.
- Be able to answer questions in a questioner or exam.

Request learners to watch the following video in class or at home to help them understand colour better.

https://www.youtube.com/watch?v=L1CK9bE3H_s

Learners' notes

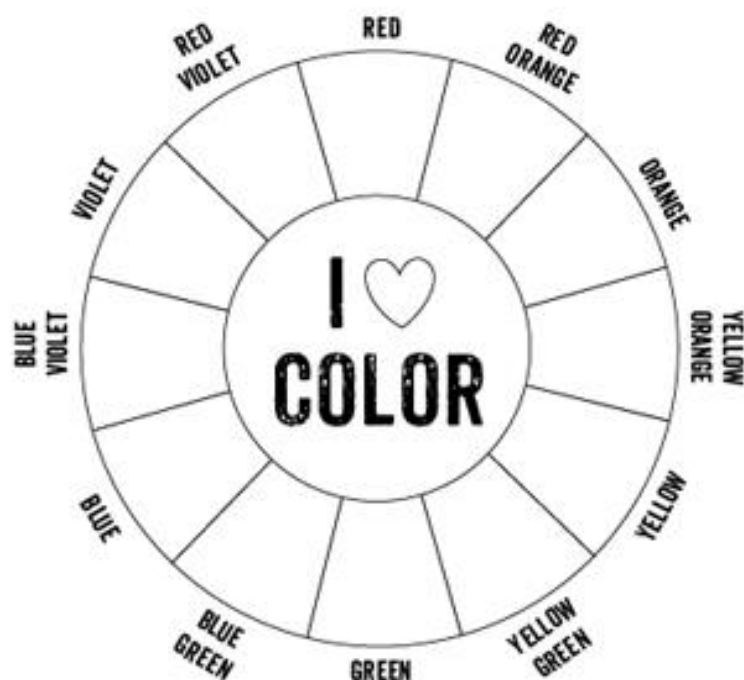

The teacher is to make sure learners adhere to the following instructions:

- Do not do this activity in this textbook.
- Your teacher will hand out the activity sheet.
- Write in the date of the activity.
- Your teacher will hand you the worksheet.
- Do not colour in this book because other learners need to use this book next year.

4.1 Use all the colours we've learned about and place them in their correct spots:

The teacher is to handout this activity sheet.

Do not use this picture to colour on. Other learners need to use this book next year.

4.2 Choose any colour and colour the blocks below from a tint to a shade.

Your teacher is to hand out this activity sheet.

Do not use this picture to colour on. Other learners need to use this book next year.

--	--	--	--	--

4.3 Use a monochrome colour and decorate the following picture.

The teacher is to handout the worksheet.

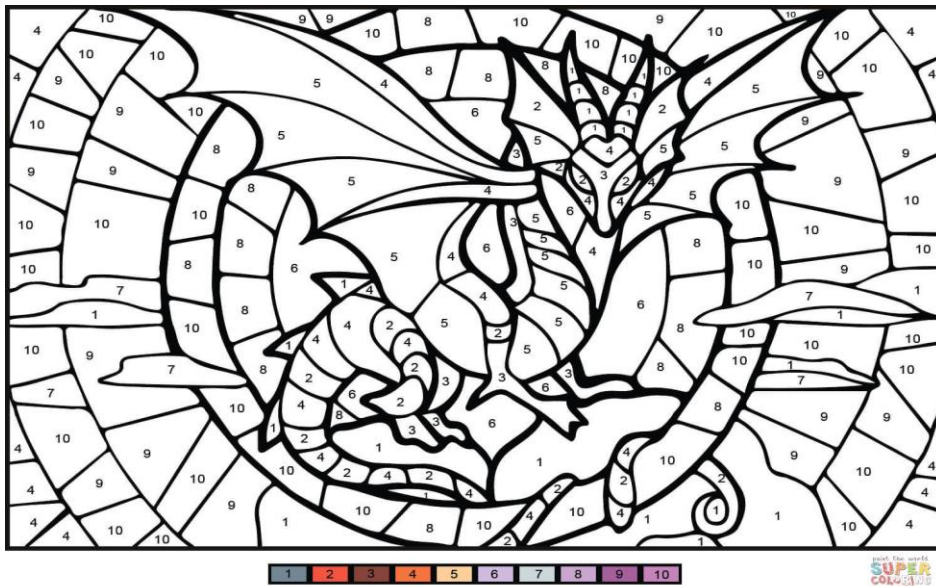

Do not colour in this book because other learners need to use this book next year.

4.4 The teacher will handout the worksheet.

Colour the dragon in by using the grid below.

Do not colour in this book because other learners need to use this book next year.

3. Texture

<https://www.youtube.com/watch?v=tDVS9XSqt90>

Texture is used to represent how an object appears or feels.

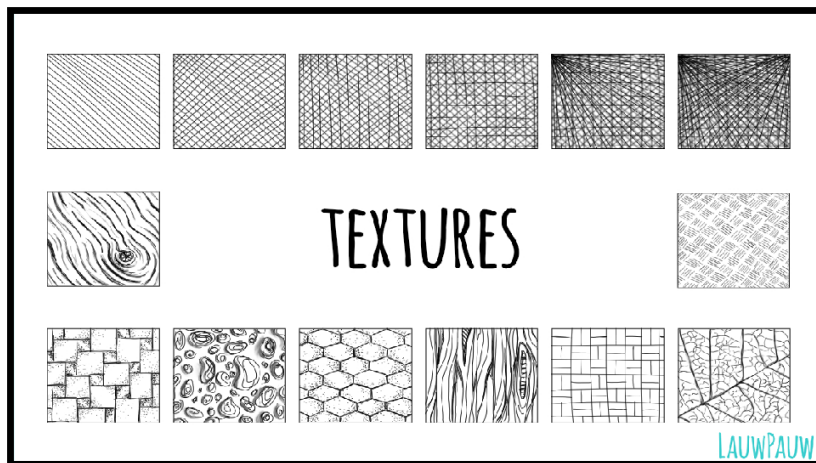

Sculptors and architects can create texture in a three-dimensional work of art by manipulating the surface texture of a piece.

There are four types of texture in art: actual, simulated, abstract, and invented texture.

Examples of natural texture would be wood, sandpaper, canvas, rocks, glass, granite, metal, etc.

How to draw texture: here is a few examples.

Activity 5

5.1 The **word texture** means: what things are made of and how they feel

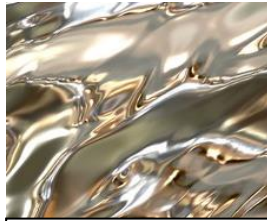

Instruct learners to describe how these things would feel if you could touch them – they are to use more than one word (don't describe what they are)

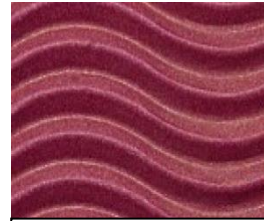

This would feel

This would feel

This would feel

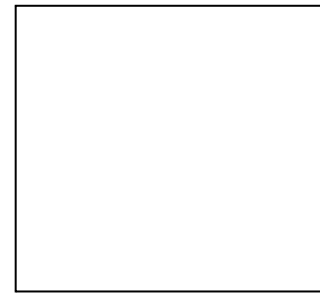

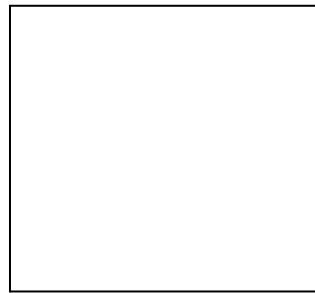

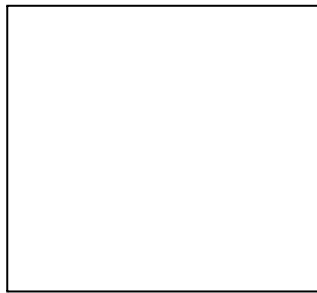

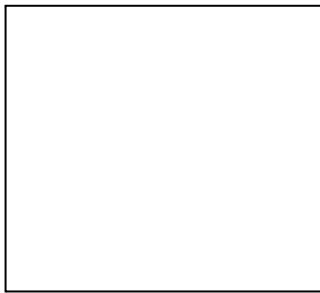

This would feel

This would feel

Write a list of 20 words that can be used to describe textures:

5.2 Use your pen or pencil to create a different texture in each of these boxes, the first one has been done for you.

TEXTURE

Activity 6

Class test

At the end of this test, you will be able to understand all art elements.

3. Design Principles

Teachers note

Show the following videos to learners so they will be able to understand Balance, pattern, and movement

<https://www.youtube.com/watch?v=TTtoWL5zuMI>

https://www.youtube.com/watch?v=E_HkQul6n-Q

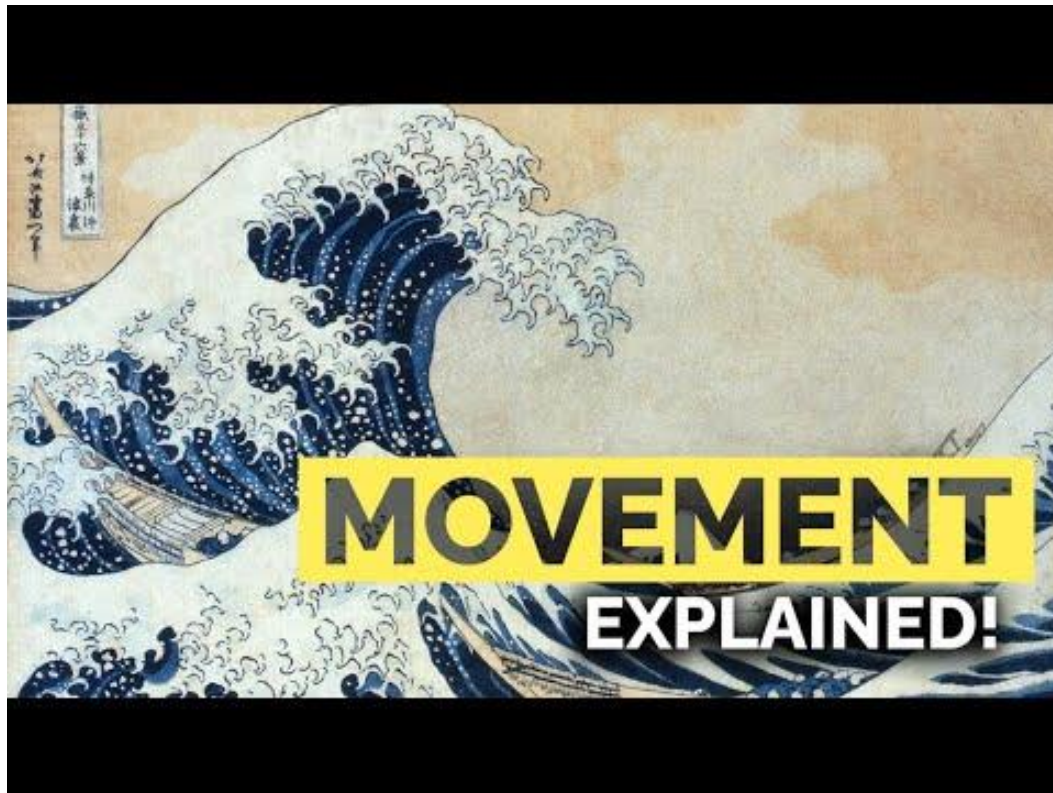

The following design principles will be done this year:

- Balance
- Pattern
- Movement

https://www.youtube.com/watch?v=E_HkQul6n-Q

<https://www.youtube.com/watch?v=TTtoWL5zuMI>

3.1 Balance

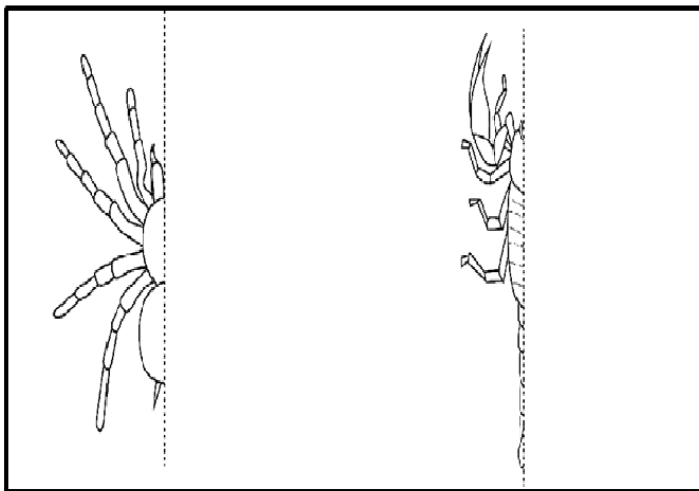

Symmetry is a very formal type of balance.

Activity 7

The teacher is to request learners to complete the other half of the picture below with a pencil and colouring the picture in with shades and tints of blue.

- In this activity the learner will need to redraw the picture's other half and colour it afterwards in shades and tints of blue.
- Instruct learners to not do this activity in this textbook.
- The teacher must hand out the activity sheet.
- After learners complete the activity sheet, they are to cut it out around the frame that outlines the picture and paste the work in their activity book or workbook as instructed by the teacher.

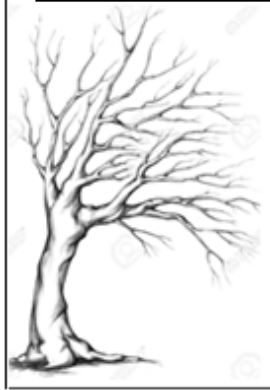

7.1

Image provided by T.Smit

Symmetry means that one side matches or mirrors the other side exactly.

Asymmetry means that
both sides are not the
same

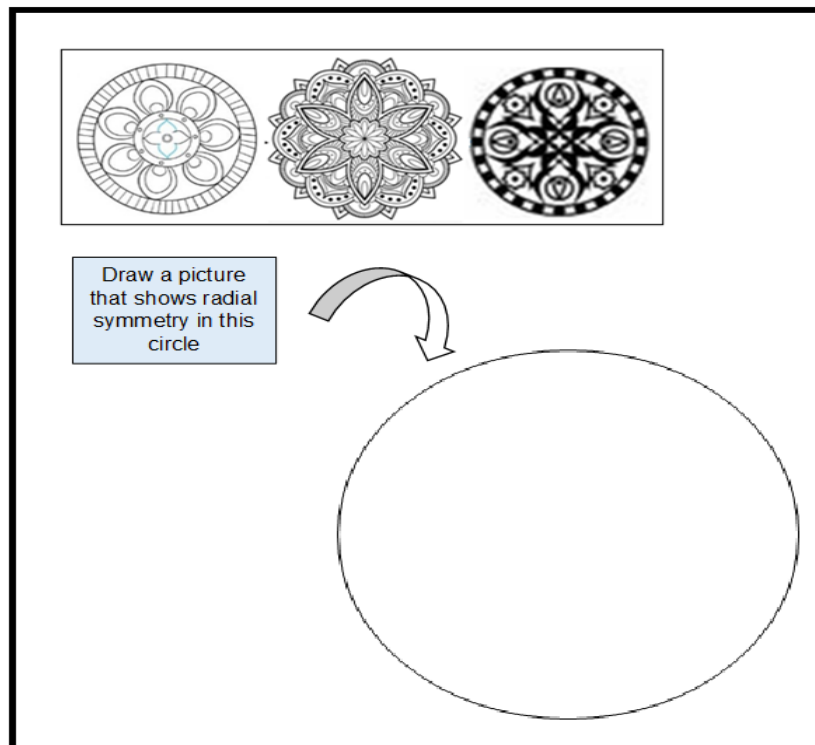

7.2 Instruct learners to draw an asymmetry picture on the worksheet given by the teacher.

They are not to draw or colour in this book because other learners need to use this book next year as well.

7.3 Creating your own mandala

3.2 Pattern

Learners note:

Ask learners to watch the following video so that they understand the content better

[.https://www.youtube.com/watch?v=GBaAiWJFNDY](https://www.youtube.com/watch?v=GBaAiWJFNDY)

They need to understand what rhythm is and how it works.

A regular arrangement of alternated or repeated elements (shape, line, colour) or motifs.

The key word here is “repeat”.

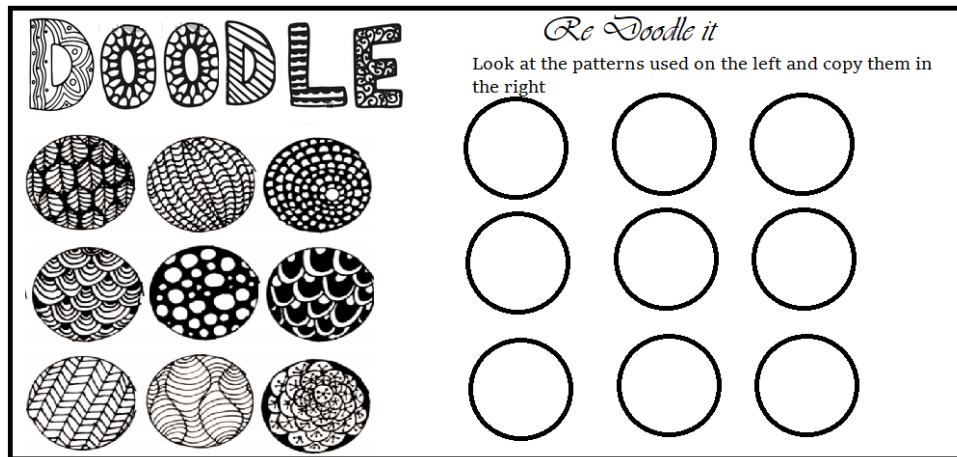

Samples where we use patterns are woven baskets, decorative pottery, architecture, sumptuous textiles, and intricate wood carvings are all means in which artists have included pattern to captivate the viewer's attention.

Activity 8

Handout worksheets to learners to complete and paste in the workbooks.

Remind them not to complete it in this textbook because other learners need to use it next year as well.

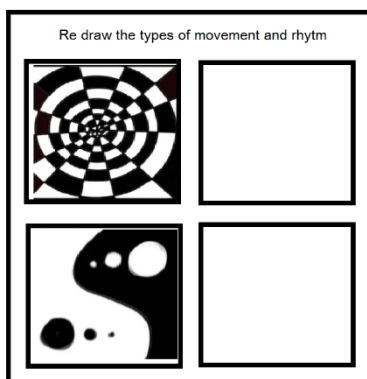

3.3

Rhythm

Rhythm refers to the movement within a piece of art that helps the eye travel through the to a point of focus. Like in music, rhythm in art can vary in its speed ... some works are calmer and more relaxed while others are more energetic and active.

Activity 9

The teacher must handout the worksheet for learners to complete and paste in their workbooks.

Remind them not to complete it in this textbook because other learners need to use it next year as well.

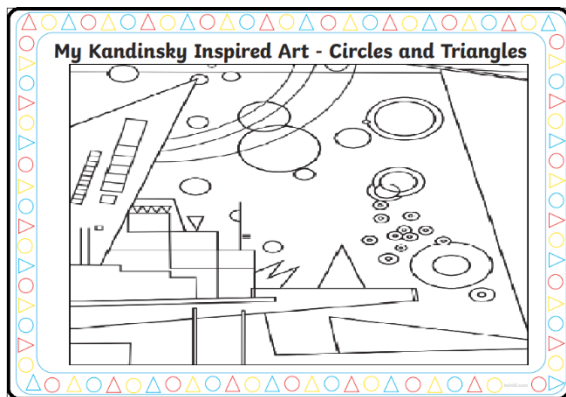

Activity 9

The teacher must handout the worksheet for learners to complete and paste in their workbooks.

Remind them not to complete it in this textbook because other learners need to use it next year as well.

1. Instruct learners to use the design principles and use them creatively in the worksheet.
2. They may use any colours and or paints to complete this activity.

3. Keep it creative and colourful

4. Visual Art Dairy

At the end of this section, instruct learners to do the following:

Create a new art dairy (portfolio)

Create a front cover page for their book using the steps below

Use the dairy when they are drawing in 2 D

Create a Visual Journal to express who you are with the Elements of Art and the Designing Principles in mind:

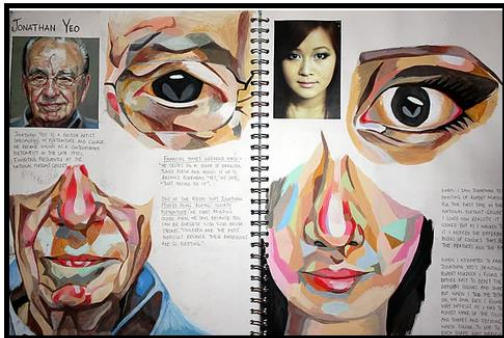

Step 1

Get yourself a sketchbook.

Buy one or make your own.

Step 2

Create the first page.

The first page should tell us something about yourself.

If you are not sure what to do yet, leave the first 2-3 pages blank for a while. You can go back to it as the creative juices starts flowing.

Step 3

Collect the things you want to put in there.

You must look for things with an eye that sees the Elements of Art and the Designing Principles in every picture or object that you choose.

Step 4

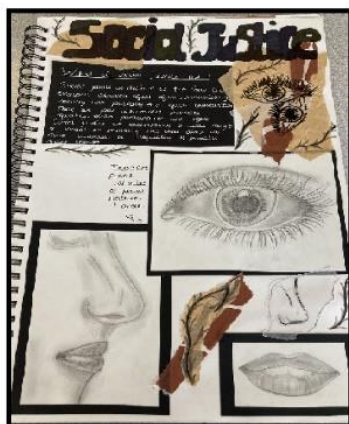

Make notes of ideas in a small notebook as they come to mind.

Keep your notebook by your side. As soon as an idea comes to you, you should write or draw it immediately. (Don't wait with it – you will forget!)

Step 5

Cutting from Magazines.

Use any magazine, fashion and art magazines, and anything else you have around.

Look at small details that represents any of the Elements of Art as well as Designing Principles.

Step 6

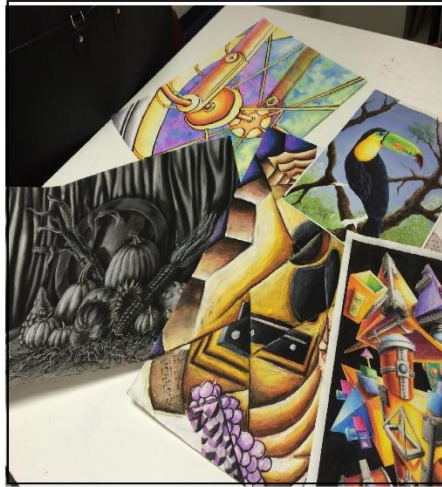

Use quotes and other inspirational texts.

Cut it out or rewrite them.

Use anything that is interesting and that would say something about who you are.

Paste everything in your journal in an exciting and creative way.

Have fun and discover yourself through the Elements and Principles of Art.

Chapter 2

Create in 2D

At the end of this chapter, learners will be able to:

- understand what a mandala is and where it is being used.
- They will also understand how to use pattern making and to integrate patterns with each other.
- Watch the following video: <https://www.youtube.com/watch?v=OiSzGBguPm0>

Create in 2 D: 1. Mandalas

- The name, mandala, comes from the Sanskrit word for circle and refers to the sense of wholeness created by both circular forms.
- A mandala contains geometric shapes and symbols.
- In religious art the mandala is a symbol of the circle of eternity or wholeness.
- The mandala is a diagram.

- People use paint or sand to make a mandala.

Activity 10.

Instruct learners to watch the following you tube videos:

1. <https://www.youtube.com/watch?v=acU7rjw7dlw>
2. <http://mydrawingblog.com/how-to-draw-mandala-step-by-step-mandala-drawing/>

Materials needed:

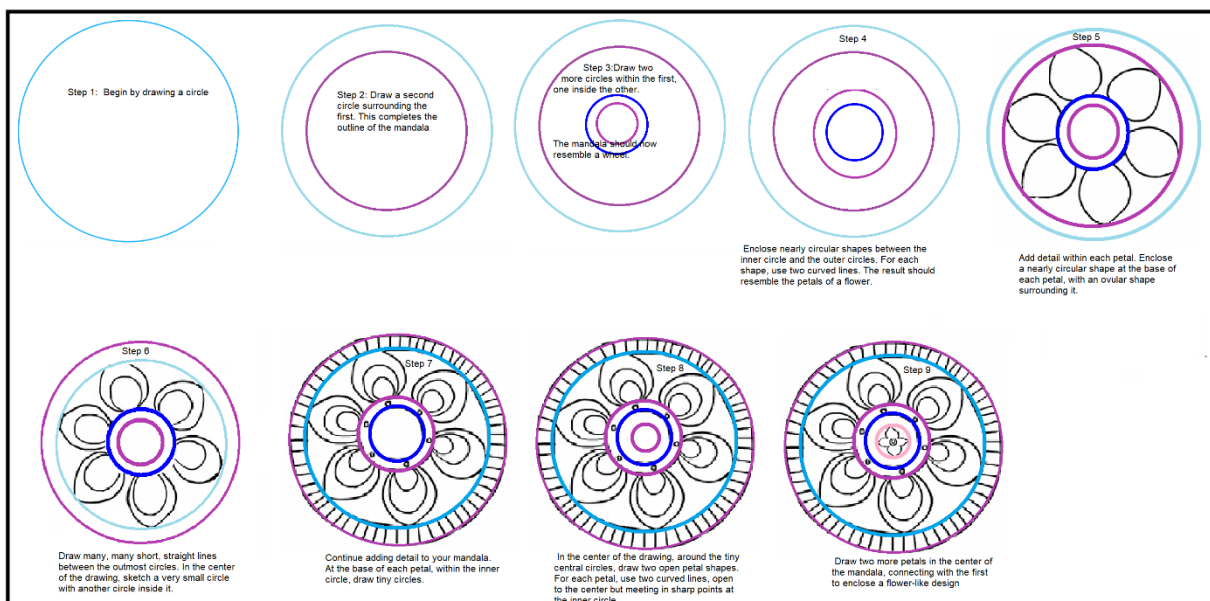

- sheet of paper (even copy paper will do)
- pencil
- drawing compass or different size bottle round caps or margarine lids
- ruler
- HB pencil
- fine liner/thin marker/pigment ink pen (any colour you like)
- (optionally) thicker marker
- Different colours thin markers or coloured pens and colouring pencils.

Instructions

The teacher is to handout a worksheet as a sample on how to create a mandala.

Ask learners to use the worksheet as a guideline.

Be creative and use all the art elements and design principles in your end product.

Activity 11

Formal Assessment

Ask learners to create a mandala of their choice.

Brief

- It may be symmetrical or Asymmetrical.
- Read the Rubric before you start of with your final product.
- Tick the rubric as you go along on what you have done step by step.
- This will assist you to make fewer faults and help you do complete the process.

The material that learners will need to make their own mandala:

- Powdered tempera paint
- Large piece of cardboard for sand
- Ice-cream sticks or plastic spoons or paintbrushes
- Pencil
- Stencils, compasses, rulers (optional)
- Water paint
- Colouring pencils

Instructions

- Work on your own.
- Neatness counts.
- Cleaning up your workstation at all times is important.
- Using the paint and glue is a process.
- Mix paint with sand and place in container.
- Design your mandala on the cardboard circle.
- Spread a small amount of glue on the area where you want the sand, and then pour the sand on.
- There need to be a focal point.
- It need to be realistic.
- It has to have balance in the picture.
- Contrasts must be seen in your design.
- There need to be reparative patters in your design.
- Your mandala has to have primary, secondary and tertiary colours in it.
- Choose one part of your pattern in your mandala that needs to show tints and shades of the same colour.
- Tap off the extra sand.
- Continue doing this until your mandala is complete.
- Spray your mandala with hairspray (or two parts water and one-part glue mixture) to protect it.

OR

Steps to follow when making a dragon eye mandala:

- Draw the eye of the dragon.
- Fill in the repetitive pattern by lightly using your pencil.
- Plan your drawing.
- Use the following in the drawing:
 - Repetitive pattern.
 - Primary, secondary, and tertiary colours.
 - Tint and shades of the same colours.
- Remember to work on your own.
- There need to be a focal point.
- It needs to be realistic.
- It must have balance in the picture.
- Contrast must be seen in your design.
- Remember the time allocation in which you need to complete this project.
- Neatness counts.
- Cleaning your workstation is very important.

Fig.: Drawing now:
staff_illustrator15

Rubric: Mandala

Criteria	5	4	3	2	1
Planning and design (a mark per criteria to be given)					
Elements of Art: Line (4)					
Elements of Art: Colours (at least 4 types)					
Did the learner at least follow four steps in creating his/her artwork					
Creativity through the use of his own ideas and not making him/her commit direct copy work					
Usage of a HB pencil range or using of the paint that the learner requested					

Technique: Looking at the level of planning his work, executing the work and are there good skills developed by the learner					
Repetitive patterns (x4 or more) were used in the artwork					
Total [40]					
End total					

Outstanding	5	• Effort far beyond that is required • The “wow” factor is evident
Very good	4	• Good evidence of effort • Technically good
Average	3	• Adequate • Displays understanding, but lacks imagination
Poor	2	• General lack of commitment • No evidence of original thought
Unacceptable	1	• Very little or no work – work incomplete • No effort

Reflection on Term 1 work

Test / Exams

The teacher must indicate what learners need to learn for this term.

The test will be based on Elements of Art, Design Principles and Mandalas

.

Chapter 3

Topic

Create in 3 D

At the end of this chapter, learners should be able to:

- Create a 3D sculpture with papier mâché and clay.
- Know basic sculpturing terms.
- Follow step by step instructions how to create a sculpture.
- Have the ability to evaluate their product and comment on it.

We are going to start our 3-D journey this year again with **papier mache** and **Clay**.

When making a 3-D model using clay, recyclable products for Paper Mache, learners must keep the following in mind:

- Art Elements to be used: colour, line, tone / value, texture, shapes, and form.
- Design principals to be used: pattern, contrast, rhythm, proportion, emphasis, unity, and variety.
- Types of tools to be used to create the product.
- The craft product must be something sellable in a market, in a shop, school craft market, farm stalls, etc.
- Learners can start off with one product and if one is fast, they may continue to a second product.

Activity 12: 1

The teacher is to handout a worksheet for learners to complete and paste in the classroom books.

Remind learners not to answer on this answering sheet, because next year other learners will be using this book.

Activity 12					Date: _____
Design principles are used to create different 3 D objects.					
Study these pictures and name the design principles that were used in each. There might be more than one principle used.					
Name as many as you recognise.					
					
_____	_____	_____	_____	_____	_____
_____	_____	_____	_____	_____	_____
_____	_____	_____	_____	_____	_____
_____	_____	_____	_____	_____	_____

12.2 Creating in 3 D

Paper Mâché Crafts

Examples of Paper crafts:

Samples below must be changed and not used directly like this, because then you will be committing plagiarism (to use an artwork or craft product just as it is)

Activity

Brief

Instruct learners to follow the following instructions:

- Make a mask and decorate it in an interesting way.
- Remember, it must be good enough to sell at a market.
- Planning needs to be done in the first phase and this must be in the visual dairy.

Materials needed:

Old newspapers
Glue & water mixture
Brush
A balloon
Carpet knife
Paint
Varnish / Sealer

Instructions step by step

Planning

Step 1

- Planning is very important factor in creating your 3D.
- During this session your creative juices will flow so you may use one or two pages to plan your product properly.
- Collect pictures of masks in magazines, newspapers, pamphlets, the internet etc.
- Create a theme page in your visual dairy where you use creative letterings as you place it on your page as the heading or focus of your work.
- Plan your mask that you will be making through drawing it and colouring it.
- Mention the resources you would like to use to create your mask
- Use mandala images on your mask as you have practiced in 2D.
- Before starting your end product, read the rubric and use the tick list so you will not fall behind with your work.

Instructions

Step 1

Image by: dreamstime

Instruct learners to inflate a balloon of the round form to the size of your head.

Image by: firstpalette

Step 2

- Tear paper or newspapers into fairly large pieces.
- We need 3 layers of paper to cover the balloon.
- Newspapers are great to use because of how well they absorb the paste.

Step 3

- However, we suggest that to clearly distinguish one layer from the next, it's a good idea to alternate newspaper pieces with unprinted paper or coloured paper.
- Make a mixture of 2 parts water and 1 part glue.

Image by firstpalette

Step 4

- Dip a piece of paper into the paste.
- Let the paper soak in the paste.

Step 5

- Put the soaked pieces of paper over the entire surface of the balloon.
- Repeat this process for at least 4 layers of paper.
- The more layers, the stronger it will be.

Image by firstpalette

Step 6

- Let the balloon dry completely.
- This might take up to 12 hours.

Step 7

Pop the balloon and remove it carefully.
smooth

Image by firstpalette

Step 8

Use sanding paper to make the rough edges
smooth

Image by firstpallet

Step 9

- Use a carpet knife or scalpel and cut the shape in two equal halves.
- Then cut openings for the eyes.
- Make sure that you will be able to see through them.

PLEASE BE VERY CAREFUL!!!

**Step 10**

Paint the whole mask white with 2 layers of white PVA paint. Let it dry.

Step 11

- Now you can draw using a felt pen and paint it any way you want.

**Assessment****Rubric: Mask**

Criteria	Mark Allocation	Learner Mark	Comment
1. Learner followed all the steps in construction of the mask.			
a. Balloon inflated the correct size.	1		
b. Tearing the newspaper in correct sizes.	1		
c. Mixing of glue and water the correct consistency.	1		
d. Cutting the eye openings correctly.	2		
e. Cutting the finished paper object in 2 equal halves.	2		
f. Covering the project with Paper Mache and repeating layers of at least 4 layers.	4		
g. Letting it dry properly.	1		
h. Taking all of the balloon out.	1		
i. Sanding the whole project smooth – especially the edges.	1		
j. Covering the body with 2 layers of white PVA	2		
k. Painting the mask in primary, secondary and tertiary colours.	9		
l. Cover the whole mask with varnish or sealer.	1		
2. Design Principles			
2.1 Pattern	2		
2.2 Contrast	2		
2.3 Rhythm	2		
2.4 Proportion	2		
2.5 Emphasis	2		
3. The final product			
3.1 Rounding off of the mask	1		
3.2 Marketable	1		
3.3 Products produced (stronger learner will make more than 1 product)	2		
TOTAL	40		

Activity 14

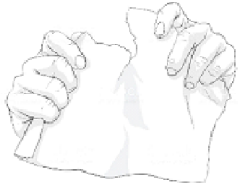

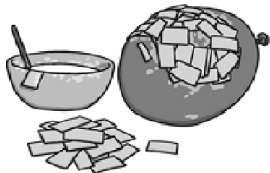

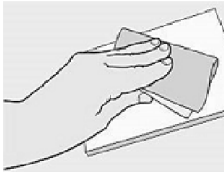

Instruct learners to complete the following two worksheets on the activity sheet handed out.

After you have completed it, cut, and paste it into your workbooks.

Do not complete the worksheets in the textbook because other learners need to use this textbook next year again.

Activity 14:		Date: _____	
Paper Mache			
14.2 Complete the table about the equipment that you use in Paper Mache			
Equipment	Name	Equipment	Name
1.1 	_____	1.6 	_____
1.2 	_____ _____	1.7 	_____ _____
1.3 	_____ _____	1.8 	_____ _____
1.4 	_____	1.9 	_____ _____
1.5 	_____	1.1 	_____ _____

14.2 Explain the process of Paper Mache in Column B that matches the picture in Column A

Column A Pictures of the process	Column B Discription of the process
2.1 	
2.2 	
2.3 	
2.4 	
2.5 	

3.2 Clay product

3.2.1 What is clay?

Clay is a kind of earth that is soft when it is wet and hard when it is dry. Clay is shaped and baked to make things such as pots and bricks.

3.2.2 Where does it come from?

- Clay comes from the ground, usually in areas where streams or rivers once flowed.
- It is made from minerals, plant life, and animals—all the ingredients of soil.
- Over time, water pressure breaks up their remains and the result is a muddy substance with lots of potential.
- Natural clay that we find outside usually needs to be cleaned and refined before it can be used.
- Any tiny rocks and lumps are removed and some additional materials, like sand are sometimes added to create the perfect workable clay that we buy.

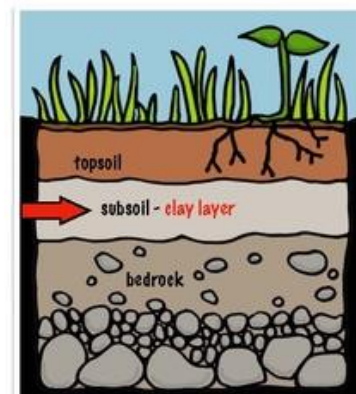

Image: tes.com:lesson ceramics

3.2.3 Kinds of clay

The three most common types of clay are:

Earthenware

Stoneware

Porcelain

3.2.4 Types of clay

Earthenware: the most commonly found clay in nature and it is the raw material usually used to make most of the pottery in the world.

Stoneware: Clays are named this because fired, they have the characteristics of stone – hard.

Porcelain: This is the product of different many early Chinese pottery workers. Its main Kaolin, also known as China clay.

techniques of ingredient is

3.2.5 Techniques for making clay products:

- The earliest method for making bowls and jugs is hand building—using only hands and clay.
- This approach is still used today.
- A ball of clay is pinched or pressed to form a bowl.
- Or the clay is rolled into ropes or coils that are then wrapped in upward circles until the desired height is reached.
- The coils are then often smoothed so that they are no longer distinct.

Here are some of the ways:

PINCH – Use your fingers to pinch and poke a single lump of clay into any shape.

SLAB – Roll the clay into flat sheets (like a pie crust) to cut apart and assemble.

COIL – Roll out long snakes of clay and twist them into coils and shapes.

WHEEL – Spin clay on a potter's wheel to form pots and vases.

WEDGING - Gets air bubbles out of your clay by pushing and compressing your clay.

SLIP – Attach clay pieces together with a pinch of water using a brush or your finger.

SCORE – Scratch clay piece with a tool.

COMPRESS – Stick clay pieces on surfaces by pressing it till it sticks.

Some tools to use when working with clay:

- Your fingers
- Rolling pins and canvas
- Popsicle sticks and toothpicks
- Cookie cutters
- Plastic bags
- A clay cutter (wire)
- Sponges
- Various carving tools, nuts and bolts, old toothbrushes and anything else you can get your hands on that will create texture in the clay

Warning

DO NOT ALLOW CLAY TO GO DOWN YOUR DRAIN! If clay gets into your sink, you will have a major problem. Always rinse your hands in a bucket of water ... the clay will settle to the bottom and you will be able to pour the water off the top (outside)

Activity 15 Clay Roses

INSTRUCTIONS:

Guide learners through the following:

1. Make use of the given clay to create an easy rose.
2. Follow the instructions carefully.
3. You will be assessed by your peer on each step.

To start our clay art, we are going to make a quick rose.
Your friends will assess your work.

Watch this YouTube video as inspiration:

<https://youtu.be/Cb0nFuKRI-s>

Step 1

Roll 9 balls small to bit larger.

Step 2

Squish them flat.

Step 3

Make a "caterpillar looking" line descending from large to small circles.

Step 4

Image: The art of
education: University

Start rolling with the smallest Pebble first.

Step 5

- Keep the top very loose and pinch the bottom as you roll.

Step 6

Step 7 and 8

- Keep rolling.
- Pinch the bottom tighter.
- Add leaves

**Assessment:**

Your Artwork will be assessed on the following:

Criteria		Possible mark	Real mark	Comment:
1. Did you follow the instructions carefully?				
	Step 1	2		
	Step 2	2		
	Step 3	2		
	Step 4	2		
	Step 5	2		
	Step 6	2		
	Step 7	2		
	Step 8	2		
2. Can you work independently?		2		
3. Will it sell on a market?		2		
Total		20		
General comments of peer:				

Test

A formal class test will be written for you to understand how paper mâché works and what the meaning and use is of tools that we used in this process.

Class Test

Clay

A. Learners are to answer the following questions.

1. What is clay?

2. Where does clay come from?

3. What was the earliest method for making clay products?

4. Why must you rinse your hands in a bucket of water?

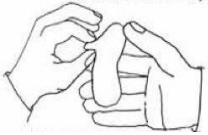

5. Name five (5) **tools** to use when working with Clay.

B. Name the three most common types of clay. Write the names under the picture that it represents.

C. Complete the table about the Techniques for making Clay products. Match the technique with the explanation. Write the answer (a,b,c,...) in Column B

Column A	Column B	Column C
Explanation of Technique	Answer (a,b,c,...)	Technique
Attach clay pieces together with a pinch of water using a brush or your finger.		a) Score 
Roll out long snakes of clay and twist them into coils and shapes.		b) Wedging 
Use your fingers to pinch and poke a single lump of clay into any shape.		c) Slab 
Roll the clay into flat sheets (like a pie crust) to cut apart and assemble.		d) Slip 

Scratch clay piece with a tool		e) Wheel 
Stick clay pieces on surfaces by pressing it till it sticks		f) Pinch 
Gets air bubbles out of your clay by pushing and compressing your clay.		g) Compress 
Spin clay on a potter's wheel to form pots and vases.		h) Coil 

Term 2

Image by <https://i.pinimg.com/564x/86/b4/65/86b4654ddc22956c78a1ddd946a2fba6.jpg>

Chapter 1

Visual Literacy

1.1 Rules and safety in the classroom

Art Room DONATIONS LIST

<https://theartofeducation.edu/content/uploads/2017/10/ArtRoomDonationsList.png>

Recap on what we need to remember as safety rules in the class and add now some posters you have created in your spare time at home what you think will be a great addition to posters on rules in class.

1.2 Materials

Bring along these types of materials each Term to assist you in creating your art and crafts products

1.3 Rules on using materials in class

Glue: Always close the bottle after finishing so glue will not become unable and hard.

Scissors: Don't walk around holding scissors pointing upwards.

Pencils: Make sure your pencils are always sharp.

Paint: Take a little paint at a time – you can always get more. Don't waste!

Paint brushes & Pallets: Make sure you clean it thoroughly after every use and leave the basin and surroundings clean.

Protecting the desks: Always put plastic over your desk when working with paint, glue and anything that can damage the desk.

Protective wear: Wear an overhaul every time you are doing practical work and hang it neatly back on the rail after use.

Things to remember:

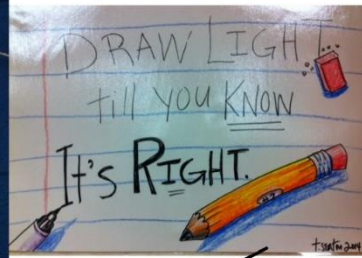

If you make a mistake:

- Erase it.
- Turn your mistake into something else.

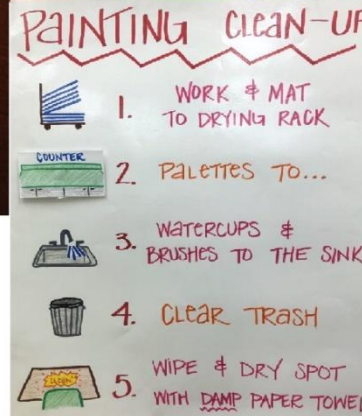

Always draw light till you know it is right and remember you can draw with chalk on a canvas or cardboards, but the golden rule is **LIGHT**.

<http://3.bp.blogspot.com>

<http://tabithaannthelostsock.blogspot.com/>

https://theartofeducation.edu/content/uploads/2016/01/IMG_5731.jpeg

2. Art elements

At the end of the chapter, learners will be able to:

- Know and understand the elements of art and design principles.
- Know how to apply art elements and design principles
- Apply elements and design principles in activities and understand how to follow instructions.
- Know drawing materials and where they come from.
- Know how to apply drawing materials in works of art.

Elements of Art

These are the basic elements that are used by Artists in creating Art; they are what you use to create an aesthetically pleasing work. When we make Art, we need to understand and apply these seven Elements of Art.

Line

A mark made by a pointed tool such as a brush, pen or stick; a moving point.

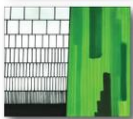

Shape

A flat, enclosed area that has two dimensions, length and width. Artists use both geometric and organic shapes.

Color

Is one of the most dominant elements. It is created by light. There are three properties of color; Hue (name,) Value (shades and tints,) and Intensity (brightness.)

Value

Degrees of lightness or darkness. The difference between values is called value contrast.

Form

Objects that are three-dimensional having length, width and height. They can be viewed from many sides. Forms take up space and volume.

Texture

Describes the feel of an actual surface. The surface quality of an object; can be real or implied.

Space

Is used to create the illusion of depth. Space can be two-dimensional, three-dimensional, negative and/or positive.

Image: Mrs. Nordensvan's Art Class Website

Principles of Design

These are the standards or rules to be observed by Artists in creating works of Art; they are how to create and organize Artwork. When elements are utilized with the principles in mind, outstanding Artwork is created.

Balance

A distribution of visual weight on either side of the vertical axis. Symmetrical balance uses the same characteristics. Asymmetrical uses different but equally weighted features.

Contrast

The arrangement of opposite elements (light vs. dark, rough vs. smooth, small vs large, etc...) in a composition so as to create visual interest.

Emphasis

Used to make certain parts of an Artwork stand out. It creates the center of interest or focal point. It is the place in which an Artist draws your eye to first.

Movement

How the eye moves through the composition; leading the attention of the viewer from one aspect of the work to another. Can create the illusion of action.

Pattern

The repetition of specific visual elements such as a unit of shape or form. A method used to organize surfaces in a consistent regular manner.

Rhythm

Regular repetition of, or alternation in elements to create cohesiveness and interest.

Unity

Visually pleasing agreement among the elements in a design; It is the feeling that everything in the work of Art works together and looks like it fits.

Image: Mrs. Nordensvan's Art Class Website

Activity 1

Instruct learners to do the following:

1.1 Identify the art elements in the following pictures.

Remind learners not write or do this activity in this book because next year other learners need to use this book.

A.	B.	C.	D.
E.	F.	G.	H.

Principles of art

Talk about the principles especially Rhythm and show learners the video that follows:

<https://www.youtube.com/watch?v=qBIQnHclT-Y&t=70s>

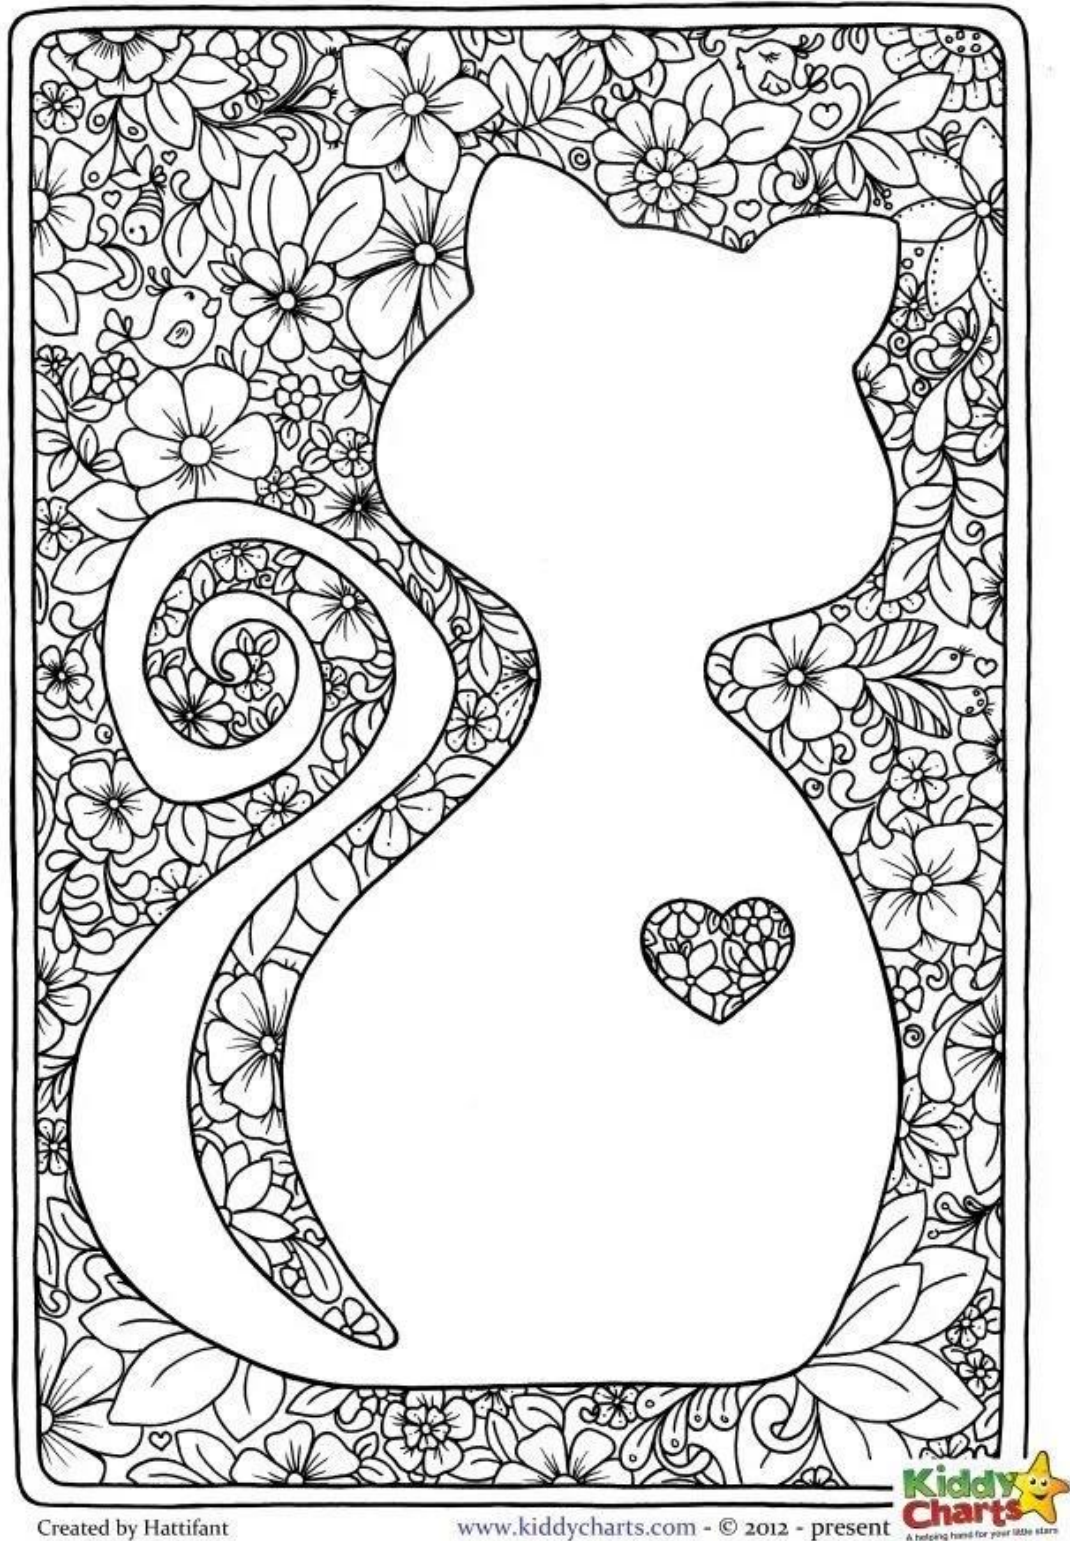

1.2 After completing this activity sheet, instruct learners to cut and paste it in their art dairy or classwork book.

Use design principles to decorate the cat with.

You may use any media to decorate the cat with.

Remember don't colour in, in this book.

At the end of this activity, learners will be able to:

- Understand the difference between art and crafts.
- Please do not complete the activity in this book but only on the activity page your teacher will hand out to you.
- After completing the activity page, you need to cut out the page and paste it in your workbooks.

3. All about art

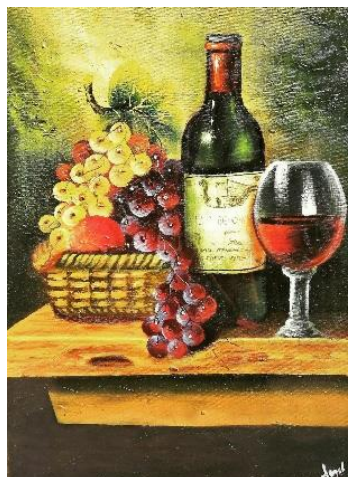

3.1 What is Art?

- **Art** is a diverse range of human activities in creating visual, auditory or performing artefacts (artworks).
- **Art lets artists** express themselves through their imagination, use of conceptual ideas, or technical skills, intended to be appreciated for their beauty or emotional power.
- The three classical branches of art are painting, sculpture and architecture.
- The creative arts are often divided into more specific categories, such as media, genres, styles and form.

3.2 Basic Types of Visual Art:

3.2.1 Still life:

- A still life is a painting featuring an arrangement of everyday objects, whether natural objects (flowers, food, wine, dead fish, and game, etc.) or manufactured items (books, bottles, crockery, etc.).
- A still life is basically "anything that does not move or is dead."
- A still life can be realistic or abstract, depending on the particular time and culture in which it was created, and on the particular style of the artist.
- The artist can use the still life symbolically or to express an idea, or formally to study composition and the elements and principles of art.

3.2.2 Landscape

- It is a natural scenery such as mountains, valleys, trees, rivers, and forests, especially where the main subject is a wide view—with its elements arranged into a coherent composition.
- Sky is almost always included in the view, and weather is often an element of the composition.
- Landscape views in art may be entirely imaginary or copied from reality with varying degrees of accuracy.

3.2.3 Seascape

- A seascape is a painting, which depicts the sea, in other words an example of marine art.
- The word originated as a formation from landscape, which was first used of images of land in art.
- It is an actual view of the sea itself which sometimes include some land or even a boat or ship.

3.2.3 Cityscape

- Within the context of art, a cityscape is a work that showcases aspects of cities.
- It is often known as the urban equivalent of a landscape.
- Cityscapes are differentiated by town or village scenes that are less urban in nature.
- Cityscapes reflect various aspects of cities including (but not limited to) buildings, urban parks, city skylines, and city streets.

3.2.4 Portraits

- The intent of a Portrait painting is to represent a specific human subject.
- Portraits often serve as important state and family records, as well as remembrances.
- Historically, portrait paintings have primarily memorialized the rich and powerful.
- Over time, however, it became more common for middle-class patrons to commission portraits of their families and colleagues.

3.2.5 Sculptures

A sculpture is a three-dimensional artwork that may be created from various types of materials like stone (rock or marble) or wood, ice, clay, or by casting metal or plaster.

Activity 2

Require learners to find pictures that will represent the different types of art in magazines and paste it in their books under the correct headings:

Still life, Landscape, Seascape, Cityscape, Portraits and Sculptures.

Activity 3

- The teacher is to hand out the worksheet for learners to answer the questions below.
- After completing this worksheet, learners are to paste it in their workbooks.
- Learners are to study the pictures below and only write one of the following answers down at the bottom of the page. Identify which articles are **Art or Crafts**.
- Learners are to study the pictures below and only write one of the following answers down:

Art or Crafts

A. _____

B. _____

C. _____

D. _____

E. _____

F. _____

G. _____

H. _____

I. _____

J. _____

K. _____

L. _____

M. _____

N. _____

O. _____

P. _____

3.2.6 A Mural is also a form of Art

(Learners to watch the YouTube video: <https://www.youtube.com/watch?v=jMB1nAmgn1A>)

When we paint a picture on a wall, we call it a **mural**.

This whole process is done in 4 basic steps:

1. To fill the holes and cracks on the wall and to smooth the wall.
2. Painting of the undercoat on the wall.
3. Drawing the pictures on the wall.
4. Painting of the drawn pictures on the wall

Step 1(Filling of holes and to smooth

Method:

- ✓ Examine the wall to find all the holes and cracks.

Sanding paper

Plaster knife and Polyfilla

Equipment:

Paint and paintbrushes

- ✓ Fill each hole and crack with the filler by putting it on the trowel.
- ✓ Spread the filler in the hole or crack.
- ✓ Scrape with the trowel over the filler to make it level with the wall.
- ✓ Scrape excess filler off.
- ✓ Let it dry.
- ✓ Smooth the rough pieces by

sanding it with sandpaper.

Step 2

Different colour paints

Equipment to paint a Mural

← **Paint swatches**

**Paint Roller
Painting Pan**

Ladder

**Different kinds of
paint brushes**

**Masking tape &
Plastic to cover
spaces you dont want paint to fall on**

(Painting of the undercoat on the wall)

The paint that we use here, is called “undercoat”.

This paint has a water base, which means that you can clean the brushes with water.

1. Place the plastic or newspapers on the floor where you are going to paint.
2. It must be right against the wall to protect the floor from getting messed with paint.
3. Use the duct tape (masking tape) to secure the newspaper or plastic to the surface you do not want paint to get onto.
4. Stir the paint well, by using a clean stick.
5. Pour some paint in the paint pan.
6. Carefully roll the roller in the pan and roll excess paint off on the flat side of the pan.
7. Roll the roller evenly on the wall by rolling it up and down.
8. Use the small, flat brush to paint the sides and corners.
9. Use the ladder to get to the higher places.
10. When you are finished painting, pour the paint back in the tin.

11. Make sure the tin is properly closed.
12. Wash the brushes, rollers and pan every time after you've used it with water.
13. Put the plastic away and throw the used newspapers away.
14. Make sure that all the paint messes are cleaned up with a wet cloth.

Step 3

(Drawing the pictures on the wall)

Method:

1. Choose the pictures you want to have on the wall.
2. Put the plastic pocket over the picture.
3. Carefully draw the picture on the plastic by using a permanent marker.
4. Put the plastic bag with the picture on it, on the overhead projector so that it shines on the wall.
5. Draw the lines on the wall by using a pencil.

Step 4

(Painting of the drawn pictures on the wall)

Equipment:

The paint that we use here, is called “acrylic”. This paint has a water base, which means that you can clean the brushes with water

Acrylic PVA paint

Containers and paint brushes

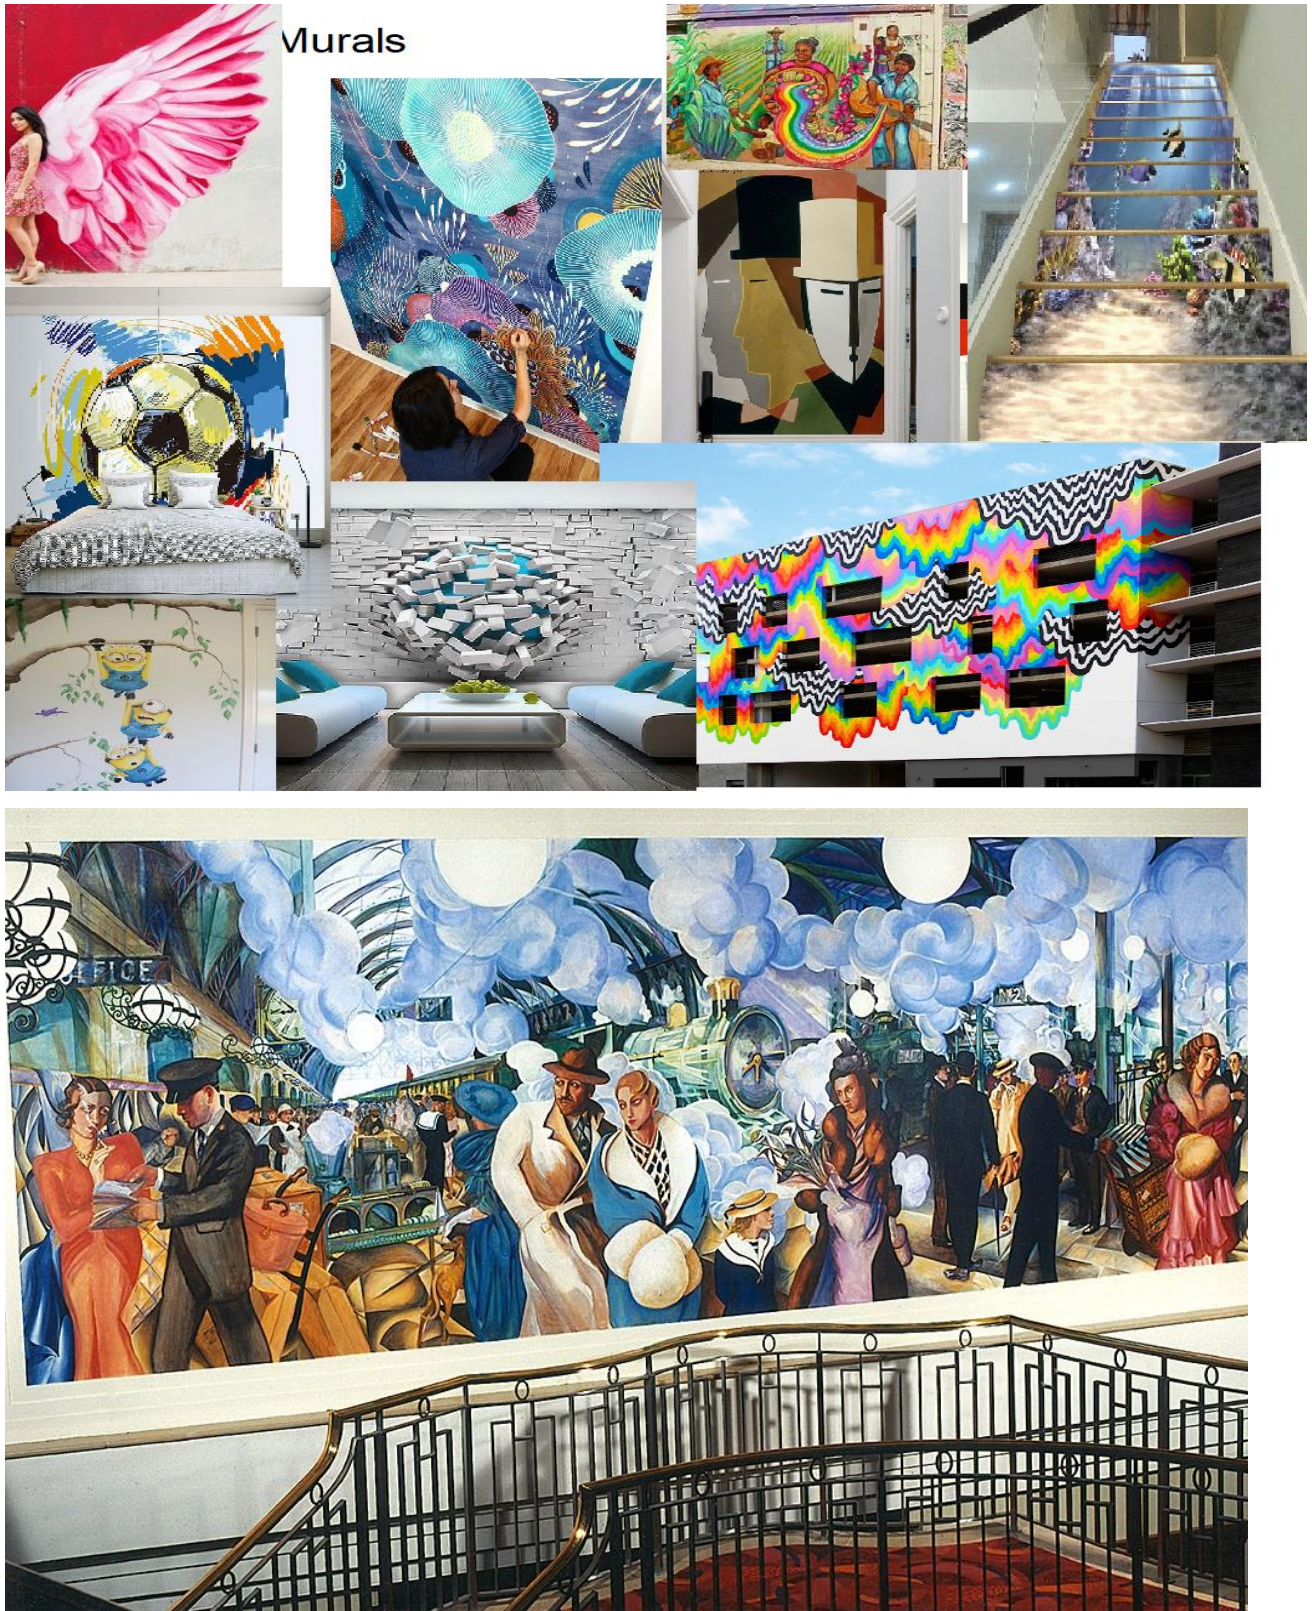

Ladder

Method:

1. Put the plastic or newspapers on the floor where you are going to paint. It must be right against the wall to protect the floor from getting messed with paint.
2. Paste masking tape on the floor, right against the wall to protect the floor from getting messed with paint.
3. Stir the paint well, by using a clean stick.
4. Pour some paint that you want to use for the mural in containers.
5. Use paint brushes to paint the drawn pictures.
6. Use the ladder to get to the higher places.
7. When you are finished painting, pour the paint back in the tin.
8. Make sure the tin is properly closed.

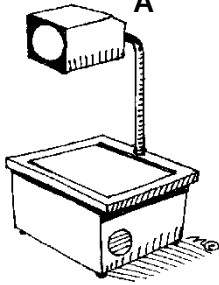

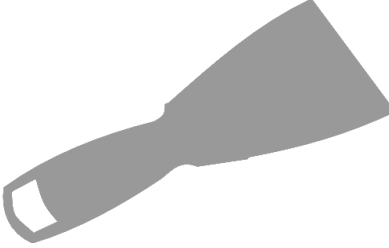

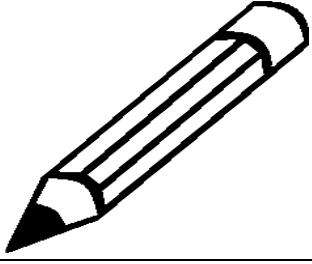

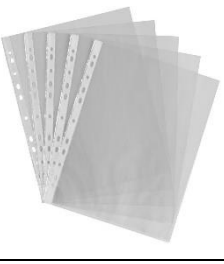

9. Wash the brushes every time after you've used it, with water.
10. Put the plastic away and throw the used newspapers away.
11. Make sure that all the paint messes are cleaned up with a wet cloth.

Activity 4

4.1 Learners must classify the following pictures of the equipment under the correct **Steps** of doing a Mural.

Write the corresponding **letter** (A, B, C, ...) in the correct column indicating in which step the equipment is used.

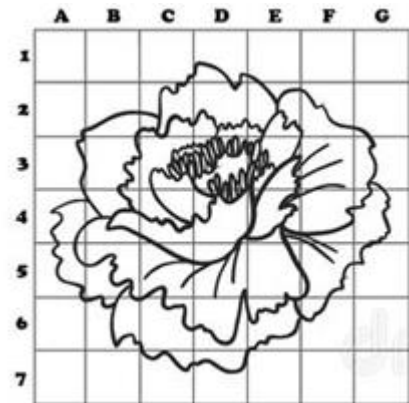

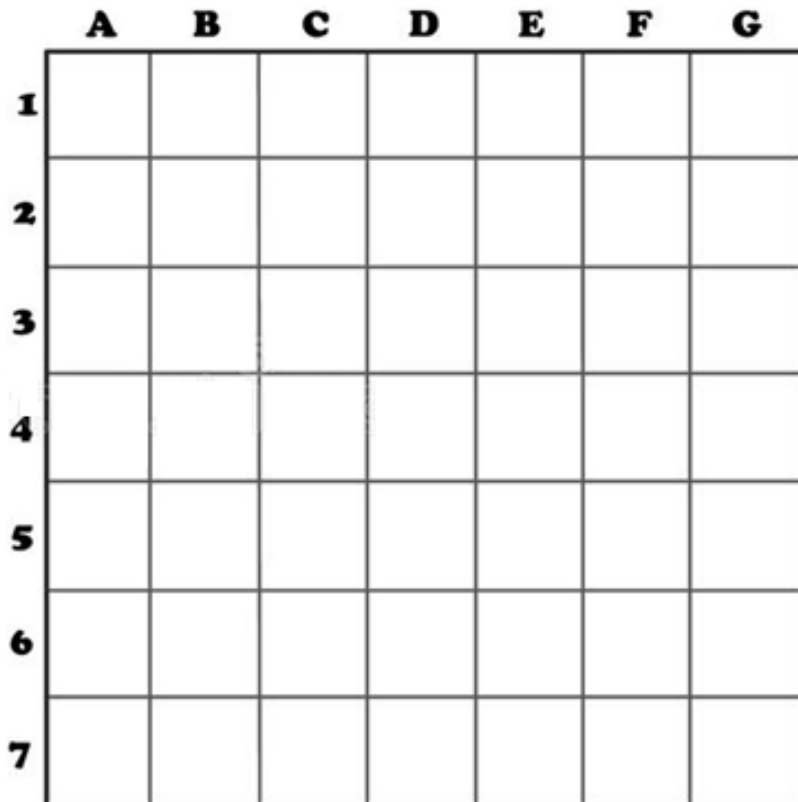

A 	B 	C 
D 	E 	F 
G 	H 	I 
J 	K 	L 

Step 1	Step 2	Step 3	Step 4

4.2 How to create a mural

Drawing using a Grid:

Instruct learners to copy the picture on the grid. Draw block for block.

4. CLASSIFYING ART AND DESIGN

Visual art products

Classifying means to group things according to their similarities.

Crafts Ceramics  Image by: Haidée, Mexican & South American imports Tobias Ceramics Garden Pots	Fine arts Drawing  Image by: Caroline Nyman website: ploopie	Design Fashion design  Image by: Reward bloggers
Puppetry  Image by Flickr: Choo Yut Shing	Painting  Image by: Ewel Artwork, Christina Love Surf Art Studio	Photographic design  Image by: greatinspire.com

Textile art  Image by: Annette	Printmaking  Image by: jobblackart: Oyster mushrooms	Interior design  Image: Instagram/odin_genly
Printing  Image by: alert stationers		Landscape design  The London Consortium design + business + lifestyle

Activity 5

Instruct learners to place the following words under the correct headings:

Industrial design	Printing	Fibre art	Painting
Landscape design	Puppetry	Printmaking	Fashion
Design	Ceramics	Sculpture	Textile art
Architectural design	Interior design	Drawing	
	Photographic design		

Crafts	Fine arts	Design

5. Drawing materials

- Most of us started drawing when we were young.
- A standard pencil on some notebook paper would often “do the trick”.
- As we grew and developed as artists, the materials, and tools that we chose become more important.
- The connection between quality art materials and quality artwork becomes noticeable along the way and it’s no wonder that emerging artists desire to have the very best materials possible.

5.1 Quality Drawing Pencils

Image by Derwent

- The most obvious essential is quality drawing pencils.
- When it comes to drawing pencils, each artist will find a brand that they connect with.
- There’s no way to know which brand will become your favourite until you try a few.
- Pencil sets usually come packaged in nice tins and can be great because they often include the full spectrum of graphite grades.
- Many sets include pencils with harder graphite (9H) through softer graphite (6B).
- Harder graphite makes lighter marks and keeps a sharp tip longer, while softer graphite makes a darker mark, but needs constant sharpening.

5.2 A Sketchbook

- A sketchbook is one of the most important things an artist can have.
- An art diary or sketchbook should be used every day.
- An active sketchbook is the artist’s “exercise”. It is the “hard work” that goes into the development of the artist and it is the breeding ground for innovative, artistic ideas.
- Since a sketchbook is recommended for daily practice, it is important to choose one that is durable and has plenty of pages for all your ideas.

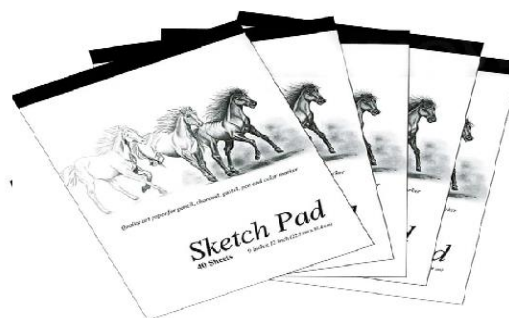

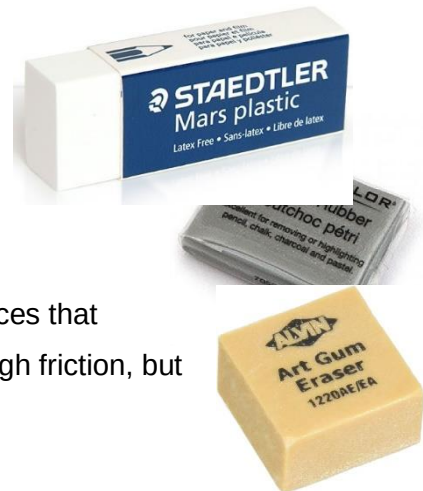

Image by ATB Sketch Books

5.3 Erasers

- Erasers are not only there to erase a mistake but, can be a great mark-making tool as well.
- There are a view types of erasers:

- **Rubber Eraser** – Your standard eraser for erasing graphite.
- **Kneaded Eraser** – This eraser lifts material from the surface, instead of using friction to remove it. It can be pulled and fashioned into different forms to create specific marks.
- **Gum Eraser** – This eraser is great for removing media from surfaces that are sensitive to tearing. A gum eraser removes the medium through friction, but crumbles as it does so – preserving the surface.

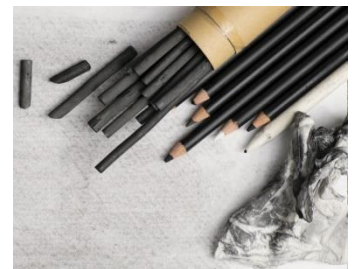

5.4 Pencil Sharpener

- Pencils need to be sharpened with a quality pencil sharpener.
- Use a poor-quality sharpener and you could be out of a pencil in a matter of moments.
- Pencil sharpeners generally fall into two categories – Manual and electric.

5.5 Charcoal

- There are more options to black and white drawing other than drawing with graphite.
- No artist's toolkit would be complete without charcoal.
- Charcoal provides a broader range of value and mark-making than what's possible with graphite. The way marks are made is different as well.
- Charcoal comes in both stick and pencil form.

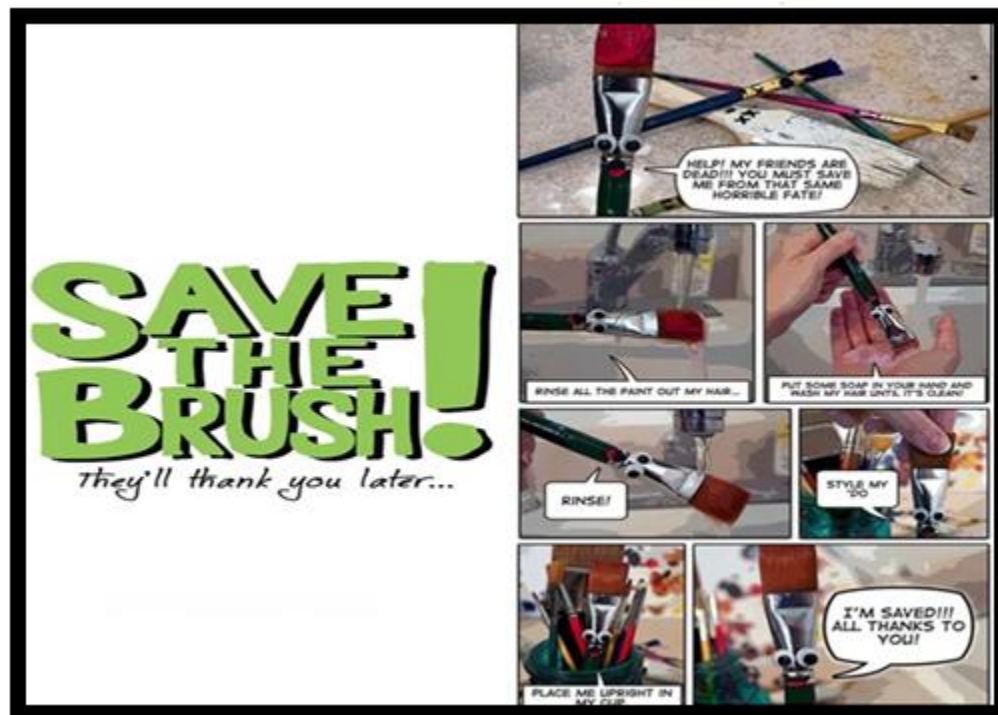

5.6 Felt tip pens

- Allows the artist to create a variety of marks.
- The tip of the pen allows the artist to create a broad range of line quality.
- Using a medium that cannot be erased forces the artist to be more deliberate with their marks.
- As a result, a bit more thought is put into the marks that are made. You can improve your drawing skills simply by using a felt tip pen while sketching.

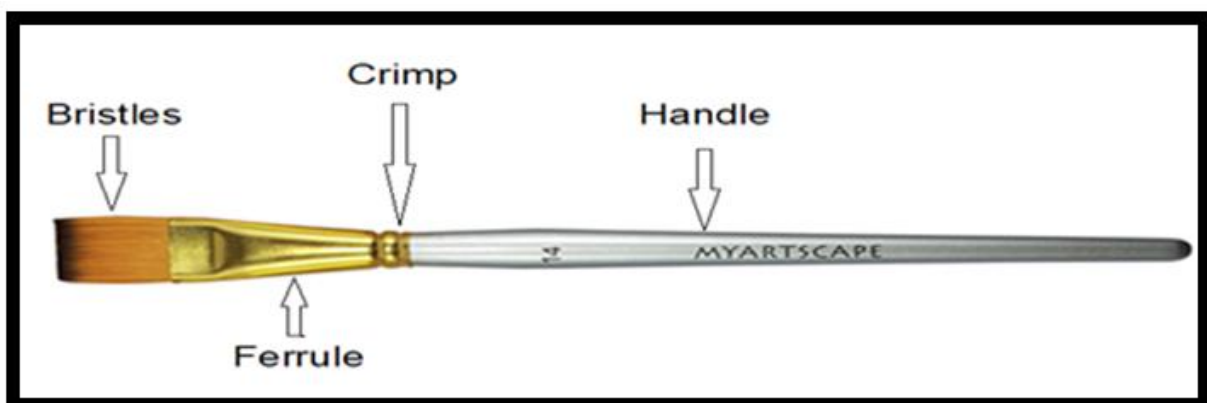

6. Art Equipment

Artist Paintbrushes

A paintbrush is made of four main parts:

1. Bristles: also known as hairs. They can be synthetic, natural or a combination of both.
2. Ferrule: the silvery bit that connects the bristles with the handle.
3. Crimp: the part of the ferrule that secures it to the handle.
4. usually made of wood or acrylic's

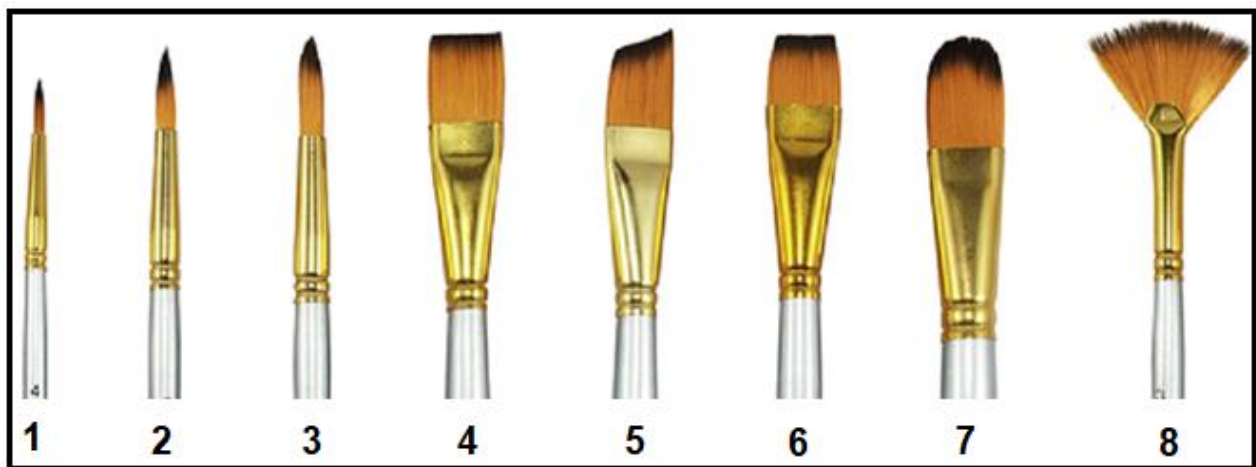

Paintbrushes for artists come in many different shapes and sizes.

The shapes and sizes of the brushes you choose to work with will depend mainly on how *large* you want to work, and how *detailed* you want to get.

Different kinds of Artist Paint Brushes:

There are 8 main types of artist paint brushes that are used for paintings. To get the best results when painting, you need to know that each one of these brushes are specially intended for a different use. Let's find out what each brush is meant for!

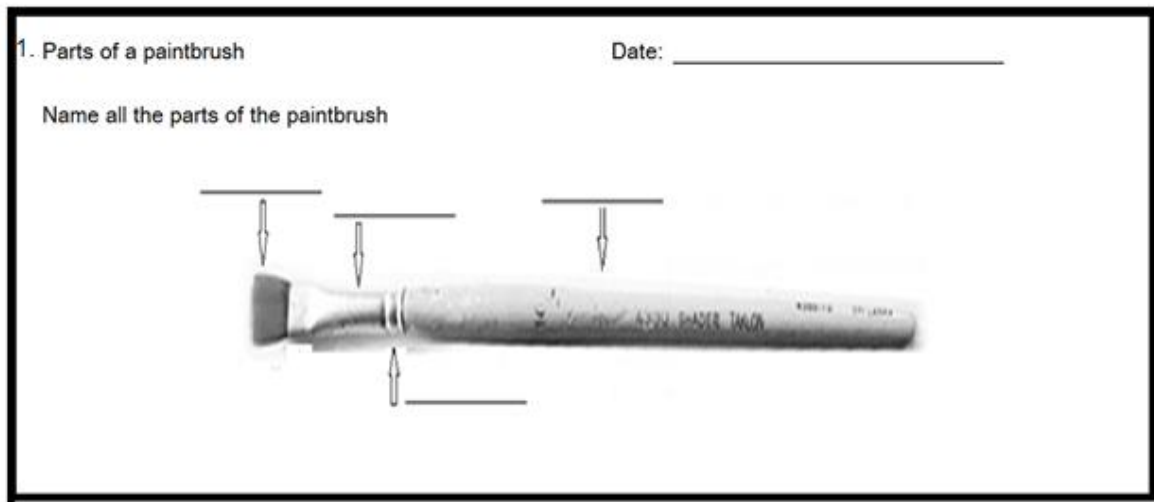

Artist Paint Brushes			
Picture	Name	Appearance	Best to use for:
	Detail Round	Round, hairs short in length.	Details and short strokes. Holds more paint than you might think!
	Pointed Round	Narrower than the round paintbrush. Has a sharply pointed tip.	Fine details and lines, delicate areas, retouching.
	Round	Round or pointed tip.	Sketching, outlining, detailed work, filling small areas. Creates thin to thick line at the tip, becoming wider the more it is pressed down. Use with thinned paint rather than thick paint.
	Flat	Square end, with medium to long hairs.	Bold strokes, washes, filling wide spaces. Can use edge for fine lines, straight edges and stripes.
	Angular Flat	Flat with angled hairs at end.	Curved strokes and filling corners. Can reach small areas with tip. Also can be used to cover lots of space, similar to fan brushes.
	Bright	Flat with edges curved inward at tip, with short hairs.	Short controlled strokes. Thick, heavy colour.
	Filbert	Flat and oval-shaped end with medium to long hairs.	Blending, soft rounded edges like flower petals. This brush is sort of a combination of the round and flat (because they cover more space than round).
	Fan	Spread hairs. Looks like a fan.	Good for smoothing, blending, and feathering. Synthetic hairs are better for textural effects, clouds, and leaves. For acrylics, use strong and sturdy ones, otherwise the hairs will clump when paint is added.

Test

The educator will hand out the test.

After the educator has marked the test, learners must cut and paste it in their workbook.

Remind learners not to answer in this book because other learners need this book for next year.

(4)

2. TRUE OR FALSE

Indicate whether the following statements are **TRUE** or **FALSE**.

Make a CROSS in the appropriate column next to each statement:

STATEMENTS	TRUE	FALSE
2.1 All bristles are synthetic.		
2.2 Bristles is also known as hairs.		
2.3 Artist paint brushes are only made of plastic.		

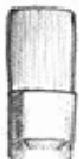

(3)

3. Fill in the correct words

The _____ and _____ of the
Brushes you choose to work with will depend on how large you want to work, and how
detailed you want to get.

(2)

4. Cut the names of the paintbrushes and their uses on the next page and paste it on the correct places on the table.

Paintbrush:	Name of brush:	Use of paintbrush:
1 	1	1
2 	2	2
3 	3	3
4 	4	4
5 	5	5
6 	6	6
7 	7	7
8 	8	8

Angular Flat	Short, controlled strokes. Thick, heavy colour.
Round	Blending, soft rounded edges like flower petals.
Detail Round	Bold strokes, washes, filling wide spaces. Can use edge for fine lines, straight edges and stripes.
Bright	Details and short strokes
Filbert	Good for smoothing and textural effects, clouds, and leaves on trees
Pointed Round	fine details and lines, delicate areas, spotting and retouching
Flat	Curved strokes and filling corners. Can reach small areas with tip
Fan	Creates thin to thick lines - thin at the tip, becoming wider the more it is pressed down.

Chapter 2

Create in 2 D

At the end of this chapter, the learner will know and understand:

- How to create in 2 D firstly in a drawing and then in a painting.
- Understand instructions on drawing and painting techniques.
- Use various art materials.
- Understand how to create a landscape.
- Be able to reflect on your own work.
- Study the pictures that the teachers show you on the wall or in the videos.
- Discuss the art elements and design principles with your teacher.

Creating in 2 D

Drawing

- Drawing helps us humans to be more creative.
- The purpose of sketching varies; it can be to try out a range of different compositions and angles, especially when it comes to still life paintings.
- It will help to mould the final artwork.
- Sketching can also help the artist to be expressive and get initial ideas down onto paper.
- Much of the expression found in the final piece of work will have been created in the sketch, however in a much rawer form.
- The brilliant thing about sketching is that you can sketch with just about anything; pencil, pen, ink, mud, or anything else you can find.
- Mark making experimentation is what has contributed to much of the art that was created in the modernist movement and beyond.

Painting

- To paint one needs to understand the processes.
- Last year you learnt that when mixing colours, one has to wash your paintbrush after you have applied a colour in order for you not to mess up your paint pallets and mix unnecessary colour you would not be able to use. You also learnt about the types of colours we get through mixing primary colours with each other.
- This year you need to learn how to draw and paint plain objects and to use your art dairies as your partner when doing a painting.
- Here follows a few tips to help you do great in your painting work:

- Mix paint onto paper and not in paint pallets.
-

Image by:deepspaceparkle

- The reason for using paper as a canvas is that it saves time and the cleaning up process is so much faster.
- Use the double load technique because again it saves time but also let's you experiment with colours.

How does the double loading technique work?

- It is where you load more than one colour to your paintbrush.
- When you load more than one colour on your paintbrush e.g. orange and yellow for instance you will have an immediate effect of tints and shades of the same colour.
- When using tints and shades of a colour we call it monochromatic colours.
-

Activity 3

By the end of this activity learners will be able to:

- Create various types of trees, flowers, and objects to use in their landscape.
- Create different shapes and lines in their pictures.
- Use textures in the landscape they are drawing.
- Use colour in a harmonious way.

Brief

- The teacher is to handout a template of the landscape to learners
- Learners may choose one of the two.
- Use pattern and repetition with value and visual weighting in their drawings of a landscape.
- Manipulate patterns to create an illusion of depth.
- Use pen and ink drawing skills
- Be creative in their thinking process.
- Instruct learners to study some of the samples below to get an idea on how their end product should look like.

Image by artist and printmaker, Daryl Storrs,

Image by Vermont printmaker Daryl V. Storrs.

Image by Denise Laurent

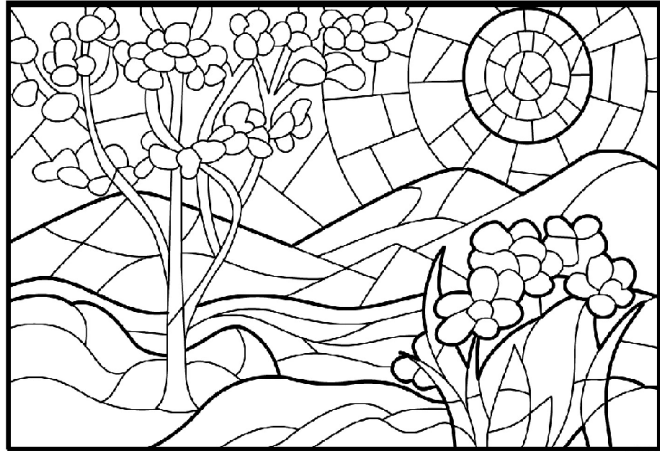

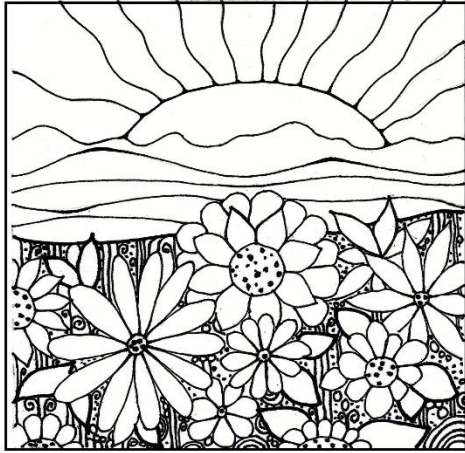

Image by Berry and Tref Davies

Image by Julianna Kunstler

This is a sample that you may study but not copy Julianna Kunstler's exact patterns because it will be plagiarism.

Formal Activity

2D landscape

By the end of this formal activity, the learner must be able to draw various types of trees, flowers, bushes etc.

The pictures learners are going to draw as practice will be pasted or done in their art dairies.

Make learners to understand that everything they draw in a picture has a specific place e.g., foreground, middle ground, and a background.

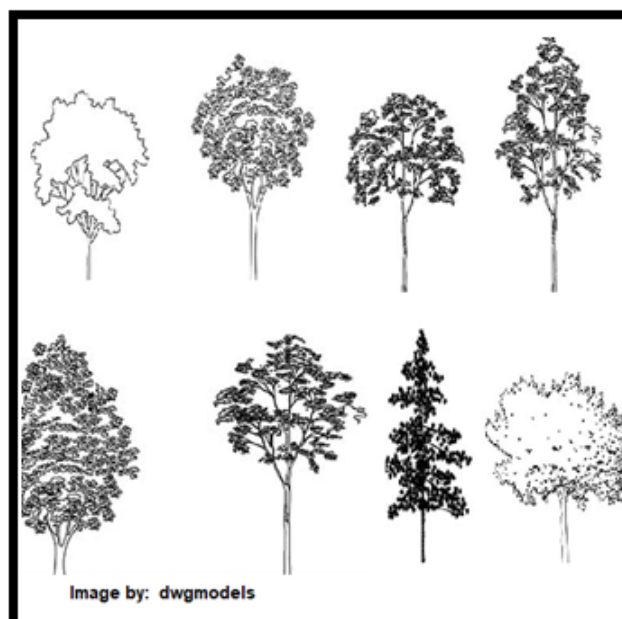

Learners will be able to analyse their end product and also understand after they have completed their landscape where they needed to improve and what types of improvements would have helped them more to have a perfect landscape.

Encourage learners to explore and experiment.

Encourage them to read through the rubric every now and again and see whether they comply with the outcomes that are given to them.

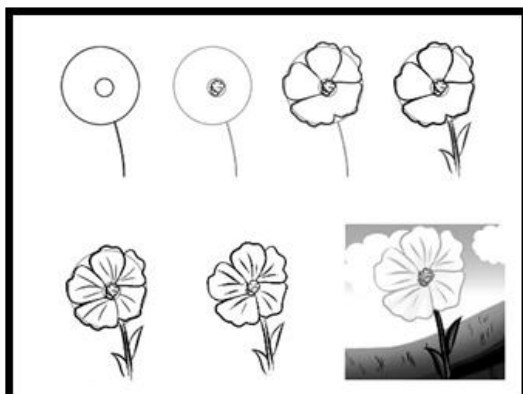

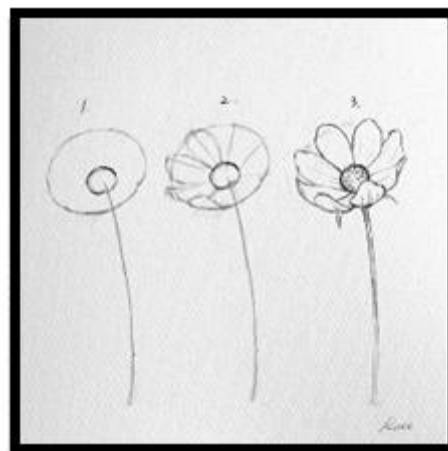

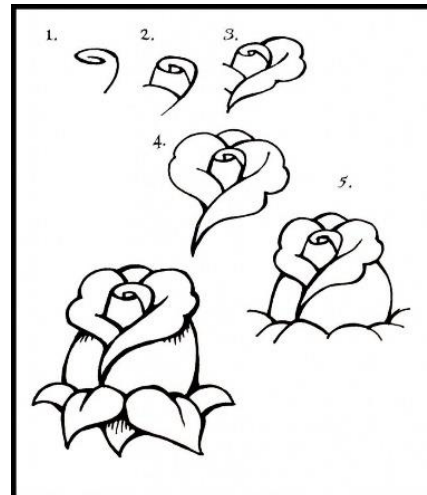

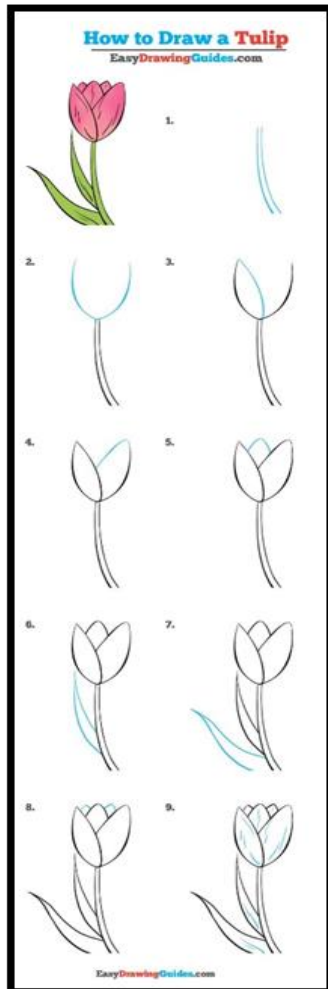

Step 1: Planning

- When creating a landscape, they are a view thing to keep in mind.
 - You need to first create a few pages where you will use pictures from magazines, posters, the internet etc., to collect ideas on what you would like in your landscape.
 - The comeliest things we find in landscapes are trees, flowers, mountains, footpaths, the sky etc.
 - Before you can create your composition, you need to first practice the above aspects.
 - Use your textbook to look at a view samples and try to draw these samples on pages in your visual dairy.
 - Remember this is part of your pre drawings before you are going to paint your composition.
-
- Here are a few samples of different kinds of tree shapes.
 - You might have found some interesting trees you would like to draw other than these samples.
 - Go ahead in your art diary and create a page with different shapes and forms of trees, past pictures and decorate your tree theme page.
-
- You need to create a few pages where you use flowers, houses, barns, dams, rivers etc.
-
- By drawing theme pages, you will become more relaxed and focus on how you would like your end composition should look like.
-
- On the following few pages, you will find art boards and step by step lessons on drawing landscapes, flowers, grass etc. follow the pictures and exercise it in your art dairies.
-
- These practicing can be done as homework on A4 white pages and then just pasted into your dairies as well.

2. You need to create a few pages where you use flowers, houses, barns, dams, rivers etc.

- By drawing theme pages you will become more relaxed and focused on how you would like your end composition to look like.
- Here are some easy step by step drawings of flowers that you need to practise:

3. Ask learners to practice drawing buildings and houses

Formal: Creating in 2D – Painting a Landscape:

- Instruct learners to watch the following YouTube Video on painting landscapes.
<https://youtu.be/Q3dBqRHQSdQ> (Landscape for beginners)
- Require them to practice this before they create their own Landscape.
- Practicing can be done as homework on A4 white pages and then just pasted into their diaries as well.
- They must follow the steps to **practice** painting a landscape.

Follow the “Moore Method”: <https://youtu.be/Q3dBqRHQSdQ> (Landscape for beginners)

- 3 Colours & White (Blue, Red, Yellow)
- 3 Brushes
- 3 Steps

Step 1: (Set the scene)

1. Mix a little blue & red – use a small paint brush to “draw”.
2. Plot down the horizon.
3. Plot down what you want and where you want it. (mountains, trees, cottage, etc.)
4. The cottage is a square, triangle and rectangle.
5. The mountains should be some behind the others.
6. Plot down some trees – at the edge of the mountain, around the cottage & wherever you want to place them.
7. Make a path from the cottage to the edge of your board. Narrow at the back and wide in the front. Don't make it straight. A F-shape works well.
8. Plot down some gate posts.

Step 2: (Get some colour in)

[Don't worry too much about detail at this stage.]

1. Use the big brush and start with the sky. (Blue & white)
2. Put some yellow at the fold where the mountains meet. Blend it with the blue & white.
3. Paint the mountains at the back a bit darker blue as the sky. (Mountains look blue in a distance)
4. Paint the mountain in the front, darker than the one at the back. (blue white and a bit of red) Paint it lighter and darker to create contours. The edges must be soft, because the eye gets drawn to harder edges and we want the mountains to blend in – especially the one at the back.
5. Mix yellow & white and paint the area around the cottage and path. Lighter at the back and darker towards the front. Put some red in to make it darker.
6. Paint the path a sort of pink colour.
7. Paint the trees. Mix the primary colours – warm, dark colour. Use the technique of “stippling” to blob the trees. Leave spaces open for the sky to come through. Put shades at the bottom to blend with the ground. Paint the trees at the back lighter than the ones in the front. Make some interesting shapes if you want.
8. Paint the cottage – use off white. Paint the roof first and put some blue in for the walls to create some shades.

Step 3: (Highlighting and details)

1. Start with the trees. (Use flat brush with hard bristles) Make highlights with some yellow & white with a bit of blue. Remember the trees at the back must be lighter than the ones in the front. Use some more red for the bush by the cottage to make it more interesting and more yellow for the tree at the back of the cottage. Make the highlights lighter to the side where the light would catch it.
2. Use the small brush to highlight some details on the cottage – shadows, door, windows, chimney and details on the roof and walls. The door and windows should only be an indication – don't put too much detail in it.
3. Path – place darker parts at the sides of the path and blend it in towards the inside of the path.
4. Put a hint of bushes at the far end of the path.
5. Gate posts – put some detail on the poles – dark lines & highlights with white where the sun would catch it. Make shades on the ground for shadows. Paint faint lines to indicate the fence.
6. Use the hard bristle brush to “push” some grass where the fence is going. Use different shades – put some red in.
7. Add some lines in the trees with the small brush to indicate a tree trunk and some branches.
8. Add more detail where you think it is needed.

Formal Activity 2D Landscape

For this product the teacher is to make sure learners have the following:

- | | |
|---------------------------|-------------------------------|
| 1. Canvas | 5. Assorted Paint brushes |
| 2. Paint | 6. Water bowl or glass bottle |
| 3. Pallet / ice cream lid | 7. Paper towel / cloth |
- When satisfied and know what to do, learners must draw a plan of where they want to place the different objects on their final painting.
 - This must also be handed in as part of the assessment of their painting.

- They must follow the steps to paint a landscape that will be assessed by the teacher.

Add Texture

- At this point, the surface is all covered in paint and the picture is complete. However, it lacks some texture.
- Mix a few greens or other colours on your palette, making sure you have different colour ranges: some intense, some dull, some light, and some dark. Apply them to the canvas with the palette, because this will give you a sense of thick and loose paint applications done on it.
- Still water is reflective, and it reflects both the landscape and the sky. Some ripples disrupting the reflections convey the idea of a horizontal surface.
- Step back and look at the painting as a whole, is anything jumping out at you as something that looks strange? Are there any unplanned awkward alignment between objects?
- Fix this before you go on. Stepping back gives you a better idea of where you would like more texture, colours etc.
- Here is an image that might help learners to create better still lives.

Formal 2D

Rubric

	Exceeded Standards (5)	Meets Standards (4)	Approaches Standards (2)	Falls below Standards (1)
Drawing (Planning)	The drawings: Are carefully planned, neat and controlled.	The drawings: Are carefully planned, not very neat, lacks in some pictures.	The drawings: The drawings are incomplete and lacks pictures.	The drawings: Is sloppy, incomplete or non-existing.
Mentor influence	The artist did research on the painting he/she wanted to create. The artist brought printed images of these paintings from home as references. The artist captured the spirit of the mentors work while still maintaining his/her own unique style.	The artist referred to one part of the painting with regards to their mentor artist for the use of colour and to do brushwork.	The artist rarely referred to their mentor artist for colour and brushwork guidance.	The artist never referred to their mentor artist's painting for colour and brushwork guidance.
Pallet and setup	Paints are always neatly set up by value or complementary colours. Water is changed often. Brush is wiped in between colour changes.	Paints and workspace set up is neat. Water is changed often. Brush is adequately wiped in between colour changes.	Paints could be set up more carefully. Water is not changed often. Brush is not wiped properly in between colour changes.	Paints are messy and the pallet looks like one blob of brown or colour. Water is dirty. Brush is full of paint from previous paint strokes.
Workplace	Your workspace is systematic and organized.	Your workspace is satisfactory.	Workspace could be more organized.	Your workspace is carelessly set up and overwhelming to others.
Colour theory	The colour or values are used excellently. The artist used the colour wheel and were consistent in colour choices. The paints add depth and dimension to the final piece by contrasting darks and lights.	The colour or values were used in a satisfactory way. The artist used his/her own ideas on mixing and depth and dimension lacked in some parts of the painting.	The colour or values look like it was not clearly planned and lacks depth and values.	The colour or values looks messy and the artist had problems understanding how to use the colour wheel.
Technique and paint application	The painting shows large brushes were used for large areas and small brushes for small areas. Dry brushing was used. The painting shows clean and neat edges. There were layering done and textures were incorporated and used exceedingly well.	The painting shows large brushes were used for large areas and small brushes for small areas. Dry brushing techniques were good. The painting shows clean and neat edges. Paint covers the whole painting and textures were good.	The artist could have changed his/her brush sizes more often as well as focused on clean edges and neatness. Some of the canvas were not covered at all. Limited texture was used.	The painting shows little to no attention to brush size, blending or edges. Work were not completed, and a lot of canvas were exposed. Texturing in the painting were very little to none.

Reflection

At the end of this activity, learners need to :

- Paste the rubric in their learner workbooks.
- The reflection must be done in the workbooks.
- Write the date of the activity in their book and the heading.
- Write down the reflection questions in their workbooks with a coloured pen and answer the question in blue.

Answer the following question:

When you completed their landscape, ask them the following questions: what difficulties or achievements did you experience during the process? Explain your answer.

Total [35]					

Chapter 3

Create in 3 D

Create in 3 D

At the end of this chapter, the learner will be able to :

- Create a 3D sculpture.
- Follow formal instruction sheet.
- Reflect on his/her own work and know how to fix future structures of a 3D sculpture.
- Know how to make papier mâché.

Sculpturing using recycled materials

Brief

- To make three to five fishes using mixed media.
- Keep in mind all the design principles and art elements when creating a sculpture.
- Make pre drawings of a product and make a theme page in a **visual diary**.
- Read the rubric and ask questions if you do not understand what to do.

Materials to be used:

Wood or hard cardboard fish in different sizes.

Wood glue

Bottle caps

Paints

Delph sticks

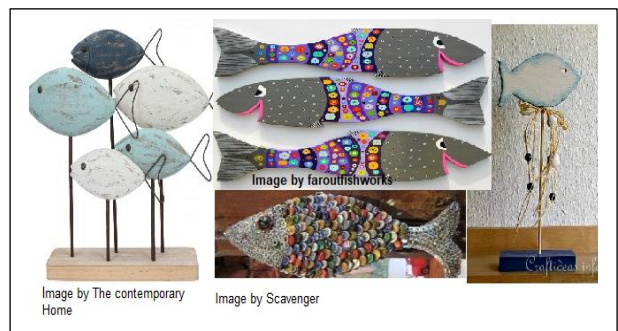

Decorated paper or serviettes

Empty cold drink cans been beaten flat

Water

Container to keep water for the paintbrushes

Flat based piece of wood for mounting purposes

Instructions

Wooden Fish

Step 1

- The teacher will first hand the fishes to learners.
- Ask learners to sand the fishes down with fine sanding paper
- Brush the fish off and see to it that there are no dust particles left on the fishes.
- Paint the fishes white with PVC paint first one side, wait until dry and repeat the process with the other side.
- Paint the fishes in bright colours using different patterning on the fish.
- Paint the other side of the fish exactly like you did with the first fish.
- Make at least three to five different fishes and different decorated painting techniques.
- Varnish the fish with clear varnish.

Step 2

- The teacher will hand learners delph sticks for each of their fishes.
- Paint the delph sticks in one colour or leave them in their natural colour.
- When leaving them in their natural colour, varnish them with clear varnish.

Step 3

- The teacher is to hand learners a mounting block that has holes inside.
- Ask learners to paint the mounting block or varnish it as well.
- Use wood glue to mount the delph sticks into the wooden block that has holes inside.
- At the bottom of the fish you will find a hole. This hole needs wood glue where you now place the fish onto the mounting delph sticks.

OR

Papier mâché fish

Instructions

Step 1

- Follow the instructions through studying the pictures.
- In picture 1, cut out 10 fishes using a template you make.
- Each fish will have two parts, a front and back part.
- In total you will have five fishes when you are done.
- Make some papier mâché and build your fish so it has a 3D shape.
- Do this with each of the fishes and wait until it dries.

Image used from vogel

Step 2

- Start of by placing the delph stick between to fishes, taping it on the back of one fish and then use the glue gun to paste the two together.
- Wait until it dries and cover the fish then with strips of newspaper dipped in a solution of water mixed with glue.
- Wait until these fishes' dries.
- Use white PVA paint to paint the fishes and wait till dry.
- You can now paint the fishes or decorate them with caps or flat buttons.

Step 3

- Your teacher will hand you a mounting block that has holes inside.

- Paint the mounting block or varnish it as well.
- Use wood glue to mount the delph sticks into the wooden block that has holes inside.
- At the bottom of your fish, you will find a hole. This hole needs wood glue where you now place the fish onto the mounting delph sticks.

Formal assessment 3D Sculpturing

Criteria	Excellent 10-8 pts	Good 7-5 pts	Fair 4-3 pts	Poor 2-1 pts
Creativity	Entirely original design, no element is an exact copy of designs seen in the source material	Most of the product's elements are unique, but 1 element may be copied from the source.	Some aspects of the product are unique, but several elements are copied from source or other classmates.	The product is an exact copy of the source material or one made by another student. No original design was put into the product.
Details	The product details are all easily viewed and identifiable from across the classroom.	Most of the product details are easily viewed and identifiable from across the classroom.	Most of the product details are easily identified when the product is seen close-up.	Many of the product details are too small even when viewed close-up or are not clear.
Attractiveness / Craftsmanship	The product shows that the creator took great pride in his/her work. The design and construction look carefully planned. The item is neat (free of unwanted bumps, drips, marks, and tears).	The product shows that the creator took pride in his/her work. The design and construction look planned. The item has a few flaws (unwanted bumps, drips, marks, tears), but these do not detract from the overall look.	The design and construction were planned. The item has several flaws (unwanted bumps, drips, marks, tears), that detract from the overall look.	The product looks thrown together at the last minute. It appears that little design or planning was done. Craftsmanship is poor
Time and Effort	Class time was used wisely. Much time and effort went into the planning and design of the product. It is clear the student worked at home as well as at school.	Class time was used wisely. Student could have put in more time and effort at home.	Class time was not always used wisely, but student did do some additional work at home.	Class time was not used wisely and the student put in no additional effort.

**Formal 3 D sculpturing****Rubric**

Criteria	Mark allocation	Learners' marks	Comment
1. Design principles and art elements	10		
2. Criteria	5		
Planned carefully, made sketches	2		
Understanding and deliberate use of SUBLIME principles			
3. Originality & Creativity	2		
Experimentation with several interpretations	2		
Unusual solution to problem			
4. Technique	2		
Unique experimentation with medium	1		
Skilful use of the material	2		
Consistent handling of material throughout sculpture			
5. Surface Treatment	1		
Definite thought given to texture	2		
Surface enhances the unity of the sculpture			
6. Effort & Perseverance	4		
Follows directions carefully	1		
On-task for entire class period	1		
Project was successfully completed	1		
Work handed in on time	1		

Reflection

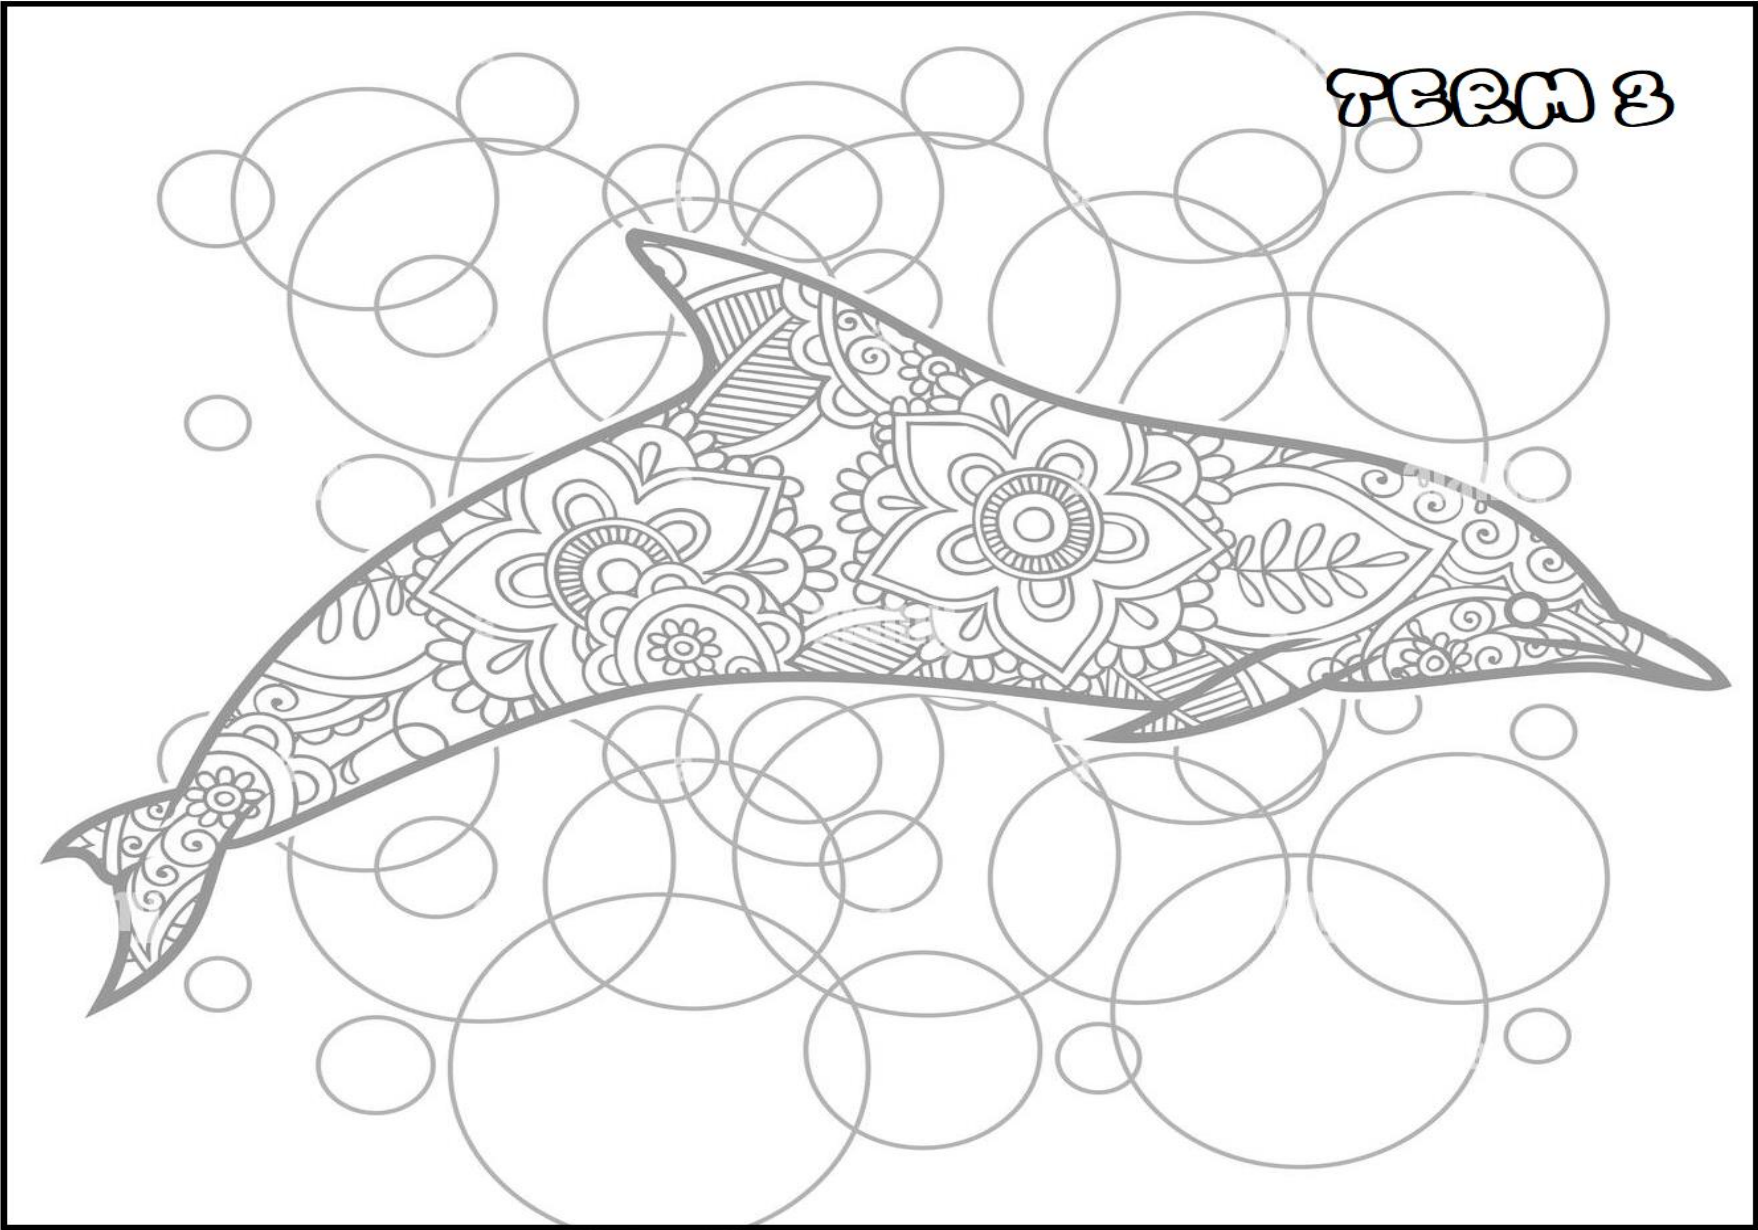

What did you have difficulty in and what went very well during this project? Explain.

This question and your rubric must be pasted in your learner workbook. Do not answer in this book please because it is a textbook someone else must use next year. [4]

Visual literacy

Test / exams

- The teacher will indicate what learners need to learn for this term
- We are testing the terms work but only on teacher recommendations.

Chapter 1

Visual Literacy

At the end of this lesson, the learner will be able to:

Understand and use art material in a responsible matter.

Will know that some art material can be hazardous to your health

Know how to behave responsible.

1. Safety

- Some things are so familiar, we do not think of them as being potentially hazardous:
- Paints
- Glue
- Felt tip markers
- Crayons
- The ingredients in many arts and craft supplies include harmful chemicals but safe glues, paints, and markers are available.
- To reduce risks, use the safe alternatives.
- Take precautions when using art and craft products and dispose of them properly.
- Hazardous products must display a **POISON** sign on the product.
- **“DANGER”** means the product is either very toxic, highly flammable, or burns the skin or eyes on contact.
- **“WARNING”** or **“CAUTION”** signals significant hazard.
- Be mindful of warnings such as "Harmful if swallowed", "Avoid skin contact" or "Flammable".
- Non-toxic labels should not be taken to mean that the material is completely safe.
- If a label states "use with adequate ventilation", does opening a window provide enough protection?
- When using these products, you should use a fan or use the product out of doors or avoid the product entirely.
- When using a fan, it is best to open a window, place the fan on the opposite side of the work area from the window, and have it blowing toward the window and over the work area, pushing the bad fumes out.

- **There are 3 kinds of markers:**
 - Water-based
 - Alcohol-based, volatile
 - Aromatic solvent-based, the most hazardous
- If a marker is labelled "permanent" it is likely to be aromatic solvent based. If the pen is odourless, or has a slightly vinegar smell, it is likely to be water-based. Water-based markers are the best to use.
- Exposure
 - Exposure to harmful substances can occur when products are:
 - Ingested
 - Inhaled
 - Absorbed through the skin
 - Contact with the eyes

Activity 1

- Instruct learners to collect pictures of labels of poisonous art/craft products and paste them in their art portfolio.
- Write some facts down on these products.
- Draw one of these products.
- Use their imagination and creativity.

2. Art elements and Design principles

	Balance	Movement	Pattern	Contrast	Rhythm	Emphasis	Unity
Line							
Shape							
Space							
Form							
Color							
Value							
Texture							

Image: <https://www.tes.com/lessons/aiACnvwmZDI6Zw/graphic-design>

Activity 2

At the end of this activity, learners will be able to understand art elements and design principles that have been taught since Term1 and were repeated in Term 2.

- The teacher must hand out the activity sheet
- This activity needs to be filled in on the worksheet.
- Learners are to complete the worksheet and paste it into their workbooks.
- Remind learners not to write in this book.

Instructions

- Learners must study the pictures below and only write in which art element or design principle were used.
- Choose the words from the word bank and fill in the answers.
- Sort the words that belong to Art element to the Art element column and the Design Principle to the Column allocated for it.

Line	Repetition	Movement	Texture
Colours secondary	Colours (monochrome)		Space
Colours (Tertiary)	Balance	Shape	Colour (primary)

3. Careers

At the end of this lesson, learners will be able to:

Understand a summary of different career paths you can follow in the arts.

Be able to identify the career they might want to follow.

Complete the activity sheet in their workbooks.

3.1 Sectors

- Fine Art, e.g., professional artist, visual arts educator, illustrator.
- Advertising, e.g., art director, copywriter, photographer.
- Design and decorating, e.g., graphic, textile, fashion, landscape, interior, product, jewellery and stage design, illustration, animation, and cartooning.
- Craft, e.g., craftsperson, product developer, operations manager.
- Architecture and the built environment, e.g., architect, town planner, landscape designer, interior designer, decorator.
- Art management and marketing, e.g., dealer, gallery supervisor, agent, publicist, fundraiser, project manager.
- Art criticism, e.g., art journalist, art critic, art historian.
- Public Art, e.g., organizing small-scale public art events, mural artist.
- Curating and conservation, e.g., curator, exhibition designer,
- Conservator working in a museum, public or private gallery or travelling exhibition.
- Education and training, e.g. teacher, trainer, educator based in a cultural museum or art gallery, development practitioner, materials developer, lecturer in crèche, school, college, NGO, community art centre, private provider, University or University of Technology

Rubric

	Exceptional 5	Very good 4	Satisfactory 3	Needs Improvement 2	Unsatisfactory 1
Skills & Techniques	Uses skills and techniques in new ways	Uses skills and technique appropriately	Uses skills and techniques to a minimum standard	Minimal application of skills and techniques. Unfinished work	No work completed
Creation & Communication	Always has highly individual and expressive ideas	Often has individualized & expressive ideas	Sometimes has expressive ideas with help from teacher	Requires frequent teacher redirection	No work completed
Cultural & Historical Connections	Demonstrates comprehensive knowledge & expressive ideas	Demonstrates broad knowledge of many contexts	Demonstrates some knowledge of contexts	Demonstrates little or no knowledge of contexts	No work completed
Aesthetic & Critical Analysis	Analyses & conclusions are accurate, detailed, insightful, valid and consistent with data	Analyses & conclusions are consistent with data	Analyses & conclusions are usually correct	Analyses & conclusions are often unclear and inaccurate	No work completed
Application to life	Always builds on previous knowledge	Nearly always builds on previous knowledge	Sometimes builds on previous knowledge	Rarely or never builds on previous knowledge	No work completed

Name:	Marks allocated	Marks received	Comments
Skills & Techniques	5		
Creation & Communication	5		
Cultural & Historical Connections	5		
Aesthetic & Critical Analysis	5		
Application to life	5		
Total	25		

4. Optical Illusions

At the end of this lesson, learners will be able to:

- Understand what optical illusions are
- Create an optical illusion artwork in their art dairies.
- Evaluate and analyse their own work to realise what they have done great and where they need to improve on their next activity

- **Op art**, short for **optical art**, is a style of visual art that uses optical illusions
- Op art works are abstract, with many better-known pieces created in black and white.
- Typically, they give the viewer the impression of movement, hidden images, flashing patterns, or of swelling or warping.

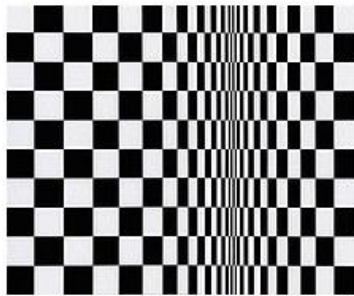

Illustration by Bridget Riley

- Artists have been intrigued by the nature of perception and the behaviour of the eye for many centuries.
 - Different effects are used to trick the eye.
 - The beginning of the optical illusion art for most is traced back to the **1950's** when a number of artists concentrated their practice on the creation of images that would puzzle the public's perception and create optical illusions.
- What was once a humble beginning, and possibly one of the more questioned and criticized art movements of our time, is today seen as branching off into many different directions and possibilities of optical illusion art.

Images by Left: Victor Vasarely – Black and White Artwork / Right: Victor Vasarely – Zebra Images via studiano.com

- Numerous contemporary artists today have dedicated their creativity to the creation of the most intricate design patterns, street art and illusionistic paintings and drawings that play with our concept of space, time, and reality.
 - Here are some examples of this art:
- The optical illusion artist of today creates 3D illusionistic paintings that decorate the streets, the buildings or even the human body.
 - The play with the perception of the eye is a major inspiration for artists who are still enjoying playing with the way we see and comprehend the world.

Activity 4

Optical illusions using line, shape, and form

The following picture that learners will be drawing has a number of steps to follow.

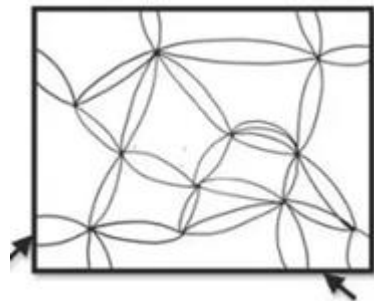

Instructions:

Follow the step-by-step instruction sheet

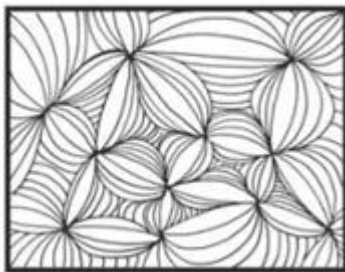

Step 1

- Draw 7 – 16 dots randomly on your A4 page.

Step 2

- Connect the dots with curved lines.
- Some curved lines should go off the page to an imaginary dot.

Step 3

- Keep adding curved lines from dot to dot, making larger curves.
- Add curved lines until the whole of the A4 is covered.
- Straight lines will make the picture look flat and will not give the optical illusion of a 3D image.

Step 4

- Choose a colour scheme and colour your design.
- Create 3D value by pressing harder near the dots and softer in the middle of the section.

Chapter 2

Create in 2 D

Visual Literacy: Pointillism

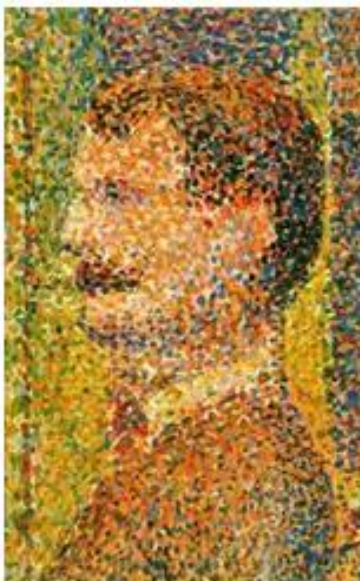

At the end of this lesson, learners will understand the following:

- What pointillism is and understand the facts
- Practice tinting and shading
- Use pointillism to create art pieces

2.1 Introduction

- Pointillism is often considered part of the Post-impressionist movement.
- It was primarily invented by painters George Seurat and Paul Signac.
- Impressionists used small dabs of paint as part of their technique.
- Pointillism took this to the next level using only small dots of pure colour to compose an entire painting.
- Pointillism reached its peak in the 1880s and 1890s after the Impressionist movement.
- Many of the concepts and ideas, however, will continue to be used by artists in the future.

2.2 What are the characteristics of Pointillism?

"The Circus"

- Unlike some art movements, Pointillism has nothing to do with the subject matter of the painting.
- It is a specific way of applying the paint to the canvas.
- In Pointillism the painting is made up entirely of small dots of pure colour.
- Pointillism used the science of optics to create colours from many small dots placed so close to each other that they would blur into an image to the eye.
- This is the same way computer screens work today.
- The pixels in the computer screen are just like the dots in a Pointillist painting.

2.3 Interesting Facts about Pointillism

- Seurat called the style of painting Divisionism when he invented it, but the name was changed over time.
- The smaller the dots, the clearer the painting and the sharper the lines, just like with the screen resolution on a computer monitor.
- In many ways Pointillism was as much a science as an art.
- Vincent Van Gogh experimented with the Pointillism technique. It is evident in his 1887 self-portrait.
- The style often used dots of complementary colours to make their subjects more vibrant. Complementary colours are colours of the opposite hue, for example red and green or blue and orange.

2.4 A Sunday Afternoon on the Island of La Grande Jatte (Georges Seurat)

- This painting is by far the most famous of the Pointillism paintings.
- It was George Seurat's masterpiece.
- It is over 6 feet tall and 10 feet wide.
- Every bit of the painting is done with tiny little dots of pure colour.
- Seurat worked on it for around two years. You can see it today at the Art Institute of Chicago.

2.5 Morning, Interior (Maximilien Luce)

- Luce used Pointillism when painting scenes of people at work.
- This painting shows a man getting ready to go to work in the morning.
- The colours are vibrant, and you can see the early morning sunlight entering the room through the windows.

Morning, Interior by Maximilien Luce

Activity 2

Teachers note:

Explain pointillism to the learners

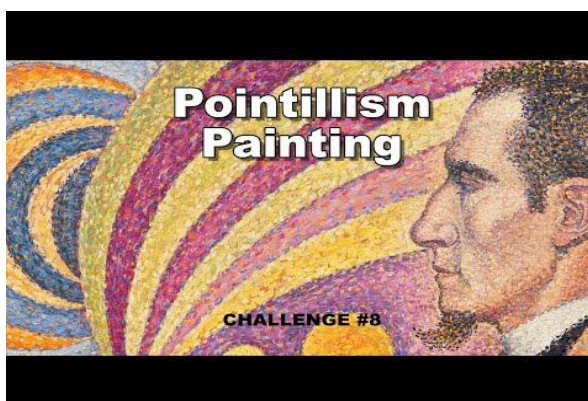

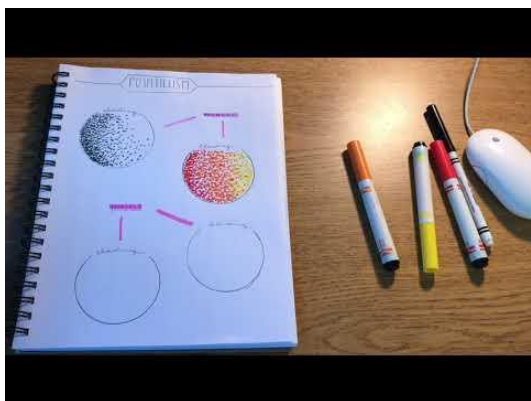

Show them the videos on pointillism

Create a PowerPoint to show learners more samples of the topic

Explain to them what to create in this activity

Before starting the lesson, please watch the following videos on pointillism:

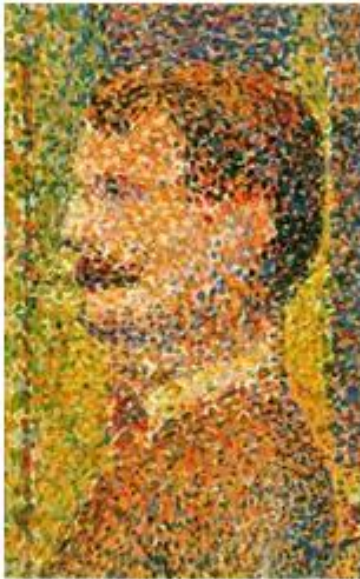

https://youtu.be/1dyapH_yAPQ

<http://youtube.com/embed/8Hrt0fdxecs?feature=oembed>

2.1 Introduction

- Pointillism is often considered part of the Post-impressionist movement.
- It was primarily invented by painters George Seurat and Paul Signac.
- Impressionists used small dabs of paint as part of their technique.
- Pointillism took this to the next level using only small dots of pure colour to compose an entire painting.
- Pointillism reached its peak in the 1880s and 1890s after the Impressionist movement.

Activity 5

Activity 5.1

Date: _____

Tinting and shading

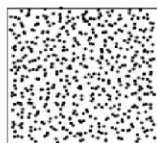

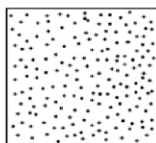

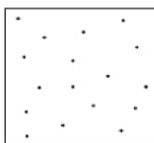

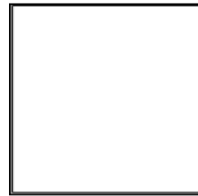

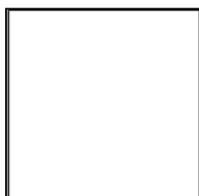

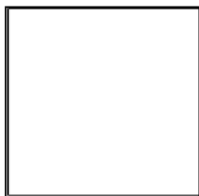

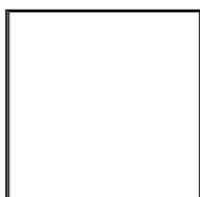

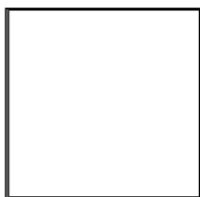

Image by beginnersschool

- Practice doing shading and tinting using a pencil and then again doing the blocks with monochromatic colours.
- Use the template shown below as an example on what it should look like.
- Do the first set of blocks with a HB pencil.
- Repeat the process. Use any one colour e.g. purple, blue, green etc. and do the following blocks with that monochromatic colour.

Pencil

Monochromatic colour

5.2 Creating your own pointillism art piece

Materials

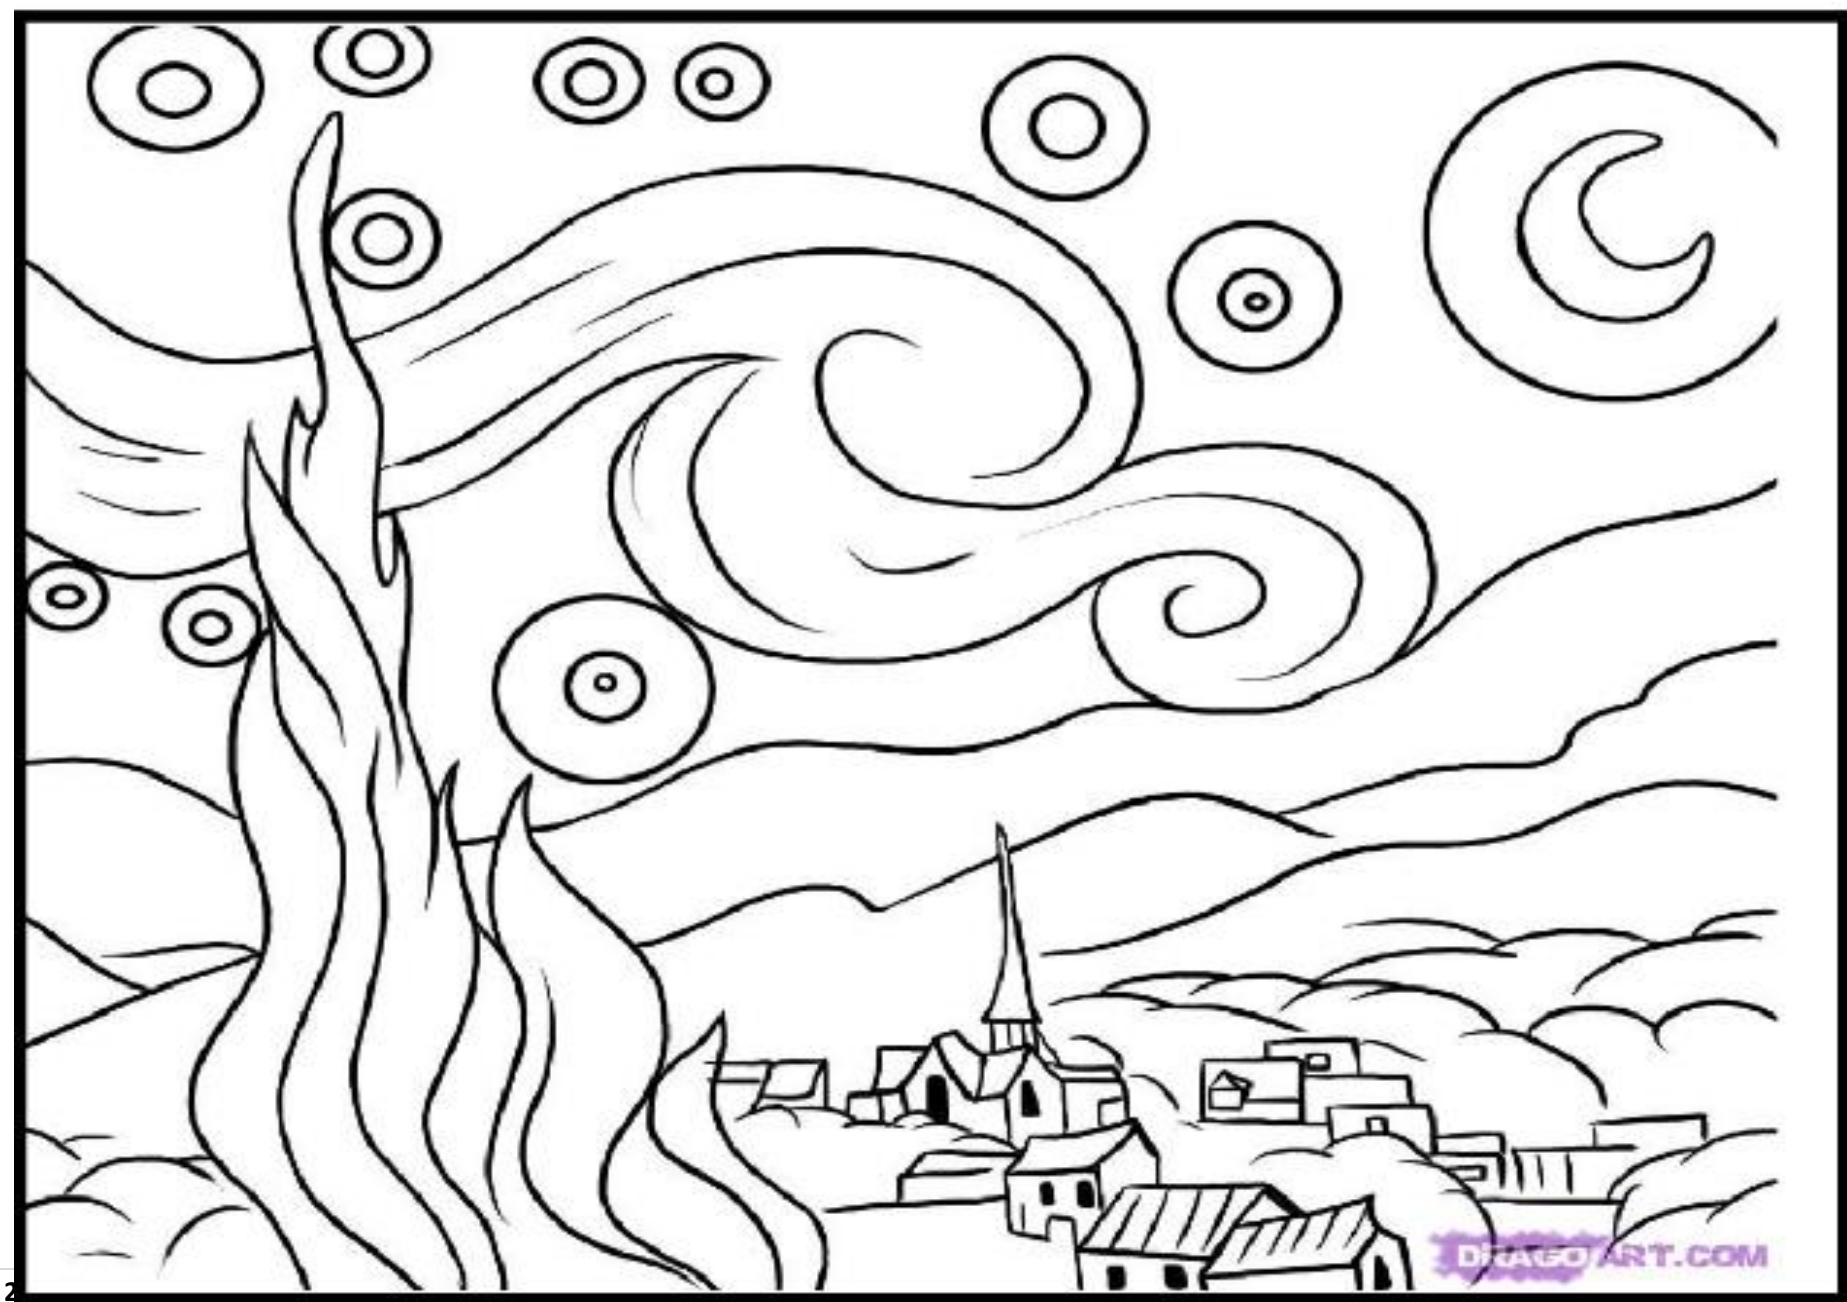

Pens	felt pens	sharpies
Paint	pencils	stamps
Round stickers	dots that come out a punch	glue
any small, rounded objects that could make a round impression		

Instructions

- The teacher is to hand learners the template of the actual outlines of the activity.
- Instruct learners to use a template of “starry, starry nights “ from van Gogh to practice and create their own interpretation of pointillism.
- Use one or more of the materials above to create a finished product in pointillism.
- Choose one colour and use all its tints and shades to decorate the page with. (using 1 colour with different

tints and shades of the same colour is called monochromatic colours).

	Level 1	Level 2	Level 3	Level 4
Knowledge of Elements	Demonstrates a limited knowledge understanding of the pointillism techniques.	Demonstrates some knowledge and understanding of the pointillism techniques.	Demonstrates a considerable knowledge and understanding of the pointillism techniques.	Demonstrates a thorough knowledge and understanding of the pointillism techniques.
Elements of Design	Presents limited creative use of pointillism design is incorporated into the piece.	Presents some creative use of pointillism design is incorporated into the piece.	Presents considerable creative use of pointillism design is incorporated into the piece.	Presents thorough creative use of pointillism design is incorporated into the piece.
Creativity	The piece shows limited evidence of original thought/creativity. Limited quality of presentation.	The piece shows some evidence of original thought/creativity. Some quality of presentation.	The piece shows considerable evidence of original thought/creativity. Considerable quality of presentation.	The piece shows thorough evidence of original thought/creativity. Thorough degree of quality of presentation.
Use of Pointillism	Dots are not used totally through. There are many bare spots on the canvas.	Dots are uneven, and there are bare spots on the canvas	Dots were used very well with small even coverage on the canvas	Excellent use of dots. Small, even and totally cover the canvas.
Use of Colour Mixing	Uses only one tinting and shading method r in areas. No attempt to layer colours or placed them next to each other for optical mixing.	Uses two colours in some areas with very little tinting and shading. Have tried to layer colours and placed them next to each other for optical mixing.	The learner is skilled in using 4 to 5 different tinting and shading scales.. Have tried to layer colours and placed them next to each other for optical mixing.	Highly skilled using 6 to 7 different scale's of tinting and shading. Colours are perfectly layered next to each other for optical colour mixing.

Chapter 3

Create in 3 D

At the end of this chapter learners will be able to:

- Understand where Dot art originated from and who the first people were that used it.
- Listen and looking at videos and understanding how to create a 3D product on dot art.
- Create a 3D dotted product with various size dots.
- Use colours you like the most.
- Follow the educator's instructions to create a neat product
- Understand some basics about Mosaic
- Know which tools to use to do mosaic art.
- Know the steps in creating a mosaic art piece.
- Create your own mosaic art piece.

How to create a masterpiece in dot art

<http://youtube.com/embed/IRgojUp2zR0?feature=oembed>

Chapter 3

Create in 3 D

At the end of this chapter learners will be able to:

- Understand where Dot art originated from and who the first people were that used it.
- Listen and looking at videos and understanding how to create a 3D product on dot art.
- Create a 3D dotted product with various size dots.
- Use colours you like the most.
- Follow the educator's instructions to create a neat product
- Understand some basics about Mosaic
- Know which tools to use to do mosaic art.
- Know the steps in creating a mosaic art piece.
- Create your own mosaic art piece.

Visual Literacy

3.1 Dot Art

- Dot painting originated in 1971. Geoffrey Bardon was assigned as an art teacher for the children of the Aboriginal people in Papunya.
- He noticed whilst the Aboriginal men were telling stories they would draw symbols in the sand.
- Bardon encouraged his students to paint a mural based on traditional dreaming on the school walls. The murals sparked incredible interest in the community.
- He encouraged them to paint the stories onto canvas and board.
- Soon many of the men began painting as well.
- Bardon helped the Aboriginal artists transfer depictions of their stories from desert sand to paint on canvas.
- The Aboriginal artists soon became concerned that the sacred-secret objects they painted were being seen not only by Westerners, but Aboriginal people from different regions that were not part of their tribal stories.

- They did not want them to understand or learn the sacred, restricted parts of their stories so the artists decided to eliminate the sacred elements and abstracted the designs into dots to conceal their sacred meanings.
- Aboriginal artists abstracted their paintings to disguise the sacred designs so the real meanings could not be understood by Westerners.
- Dot paintings are now internationally recognised as unique and integral to Australian Aboriginal Art.

Create in 3 D

Formal Activity

Before they start this activity, learners must watch the following You Tube videos:

These videos will give you some hints and tips on what you can do.

At the end of this 3D project, learners will be able to:

- Create a 3D dotted product with various size dots.
- Use colours they like the most.
- Follow the educators' instructions to create a neat product
- Will be able to do costing and sell the product to a marketable institution.

Planning of the product

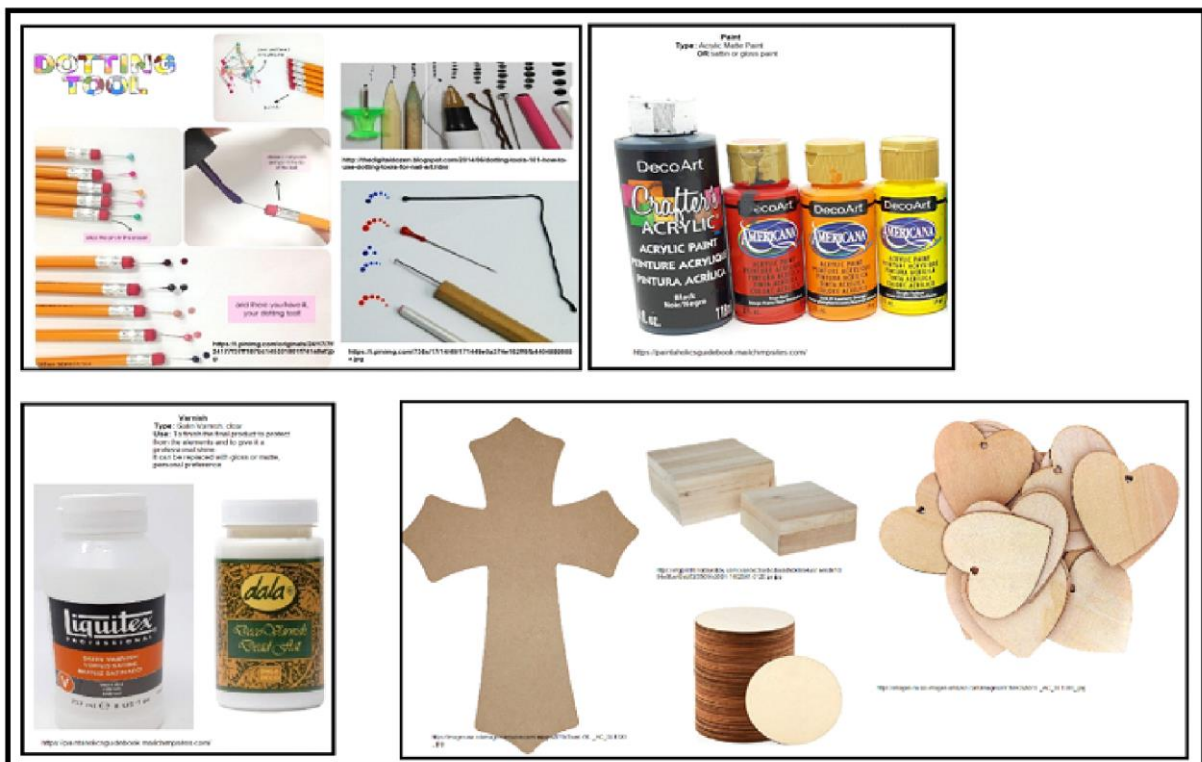

Request learners to collect images and ideas from the internet, art museums, flyers, magazines etc.

Set up an idea board where they plan out what they would like to do.

Draw a few products and how they would like to create their mandala images on it or if they want to go abstract, they need to plan these ideas as well.

Encourage learners to read the rubric before starting with the product.

Materials

Samples of end products

Remind learners that if they make their own product; they may not copy direct from an image but need to have own ideas. If they use the images as is, they are committing plagiarism.

Instructions

Activity 6

Instructions

Step 1

- Learners to choose their medium that they would like to work on e.g., round stones, hearts, cross, underplates, bottles, shoes, etc.
- Paint your product with a base paint or prime the wood so that it will become waterproof.
- Black background makes a product pop (stand out).
- Put two coats of paint on rocks using any type of paint brush.
- The number of coats will depend on what type / brand / finish of paint used.
- Whatever they are using, make sure the product is completely covered with a solid coat of paint.
- You don't want to leave any streaks or areas where the product shows through because these will be visible on the end product.

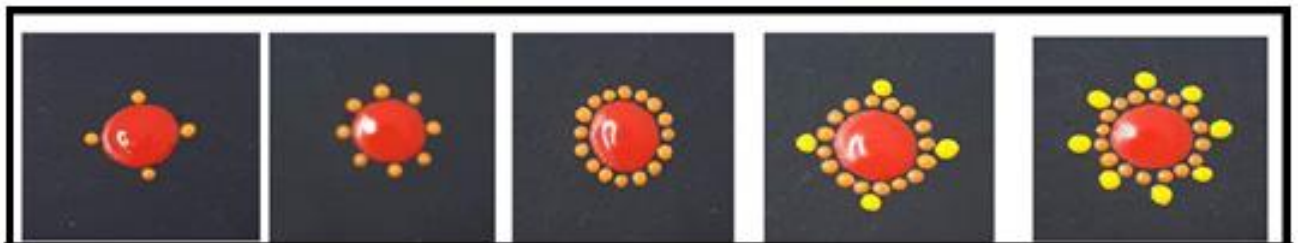

Step 2

- Find the centre of whatever piece they have chosen.
- I took a piece of graph paper and cut it into a circle. I then folded the circle twice to find the centre and put a tiny little hole in it.
- You can buy silicone templates or make your own out of x ray plates.
- Once you have marked your centre hole, you can now paint your centre dot.
- Press down onto the centre placement dot we made with your Q-tip until the rod meets the rock and the paint bulges out similar to the picture below.

Step 3

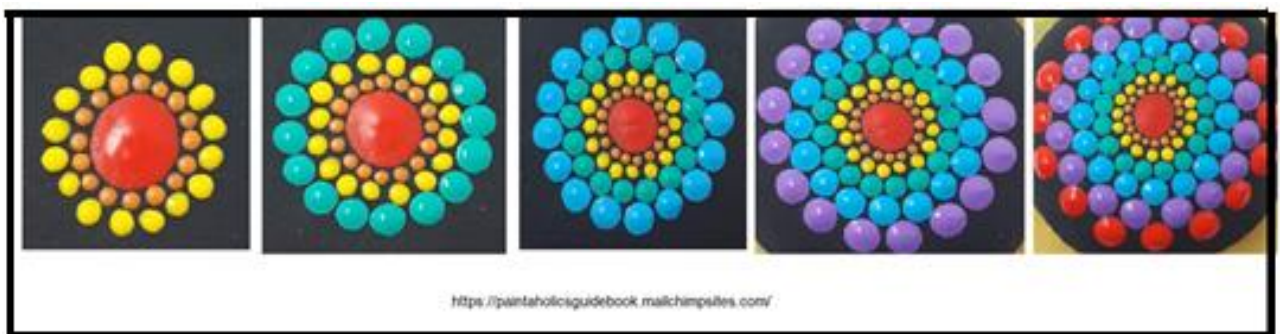

- Now that we have our large centre dot, the basis of our entire mandala, it is time for the tedious first row.

- The centre row takes more practice than any of the other rows.
- This row sets the stage for how the mandala will form as it grows to the larger dots.
- Using a toothpick for the first row, follow the picture below to gauge how much paint to put on the end of it. You want a very small amount of paint.
- When you think you have the smallest amount you can have, make it smaller!
- These little dots do not require a lot of paint and are easy to smudge if you use too much.
- If your toothpick is too small at the point to get enough paint, use a pair of scissors, and cut a hair off the end of it.

Step 4

- Small variations in it can be corrected in the following rows if you are unable to make every dot the same size.
- With your toothpick dipped in the paint as shown above, make your first small dot at the top of your large dot, followed by another below.
- Once you have these placed, you can turn your stone 90 degrees and do the same thing again to now have your 4 first dots placed as shown below.
- Make sure that your dots are as close to the centre dot as you can get them without the dots running into each other.
- If you make a mistake, scrape the dot off with the end of your toothpick (careful not to mark into the stone) and repaint it black and start again!
- This step will escalate and will be done over and over again. The picture at the bottom will be able to assist us and carry us forward.

Tip

Make sure learners use the same amount of paint on the end of the tools for every dot in the same row in this mandala.

This will ensure that the dots all have similar height to them when finished.

If the size of the dot varies a small amount it may not be noticeable but if some dots are flat and some are raised from extra paint, those will be noticeable at the end because the raised dots will create shadows on the rocks.

Rubric

Formal 3-D Assessment: Dot Paint Art					
Assessment by teacher: _____					
Grade: _____ Date: _____					
Name of learner: _____					
Criteria	5	4	3	2	1
Planning and design (a mark per criteria to be given)					
Elements of Art: Line (4)					
Elements of Art: Colours (at least 4 types)					
Did the learner at least follow four steps in creating his/her artwork					
Creativity through the use of his own ideas and not making him/her commit direct copy work					
Usage of the paint that the learner requested					
Technique: Looking at the level of planning his work, executing the work and are there good skills developed by the learner					
Repetitive patterns (x4 or more) were used in the artwork					
Total [40]					
End total					

Rubric:

Outstanding	5	• Effort far beyond that is required • The “wow” factor is evident
Very good	4	• Good evidence of effort • Technically good
Average	3	• Adequate • Displays understanding, but lacks imagination
Poor	2	• General lack of commitment • No evidence of original thought
Unacceptable	1	• Very little or no work – work incomplete • No effort

Activity 7

Mosaic

What is mosaic?

- Mosaic is a traditional craft.
- In ancient times, **mosaics** have mesmerized with their dazzling colours and distinctive aesthetic.
- Often made of coloured glass tiles, mosaics offer an eye-catching approach to art and decoration.
- Due to their ornate designs and seemingly mysterious methods, you may think that the mosaic-making practice is best left to the professionals.
- However, with just a handful of materials and a couple of tools, you can make your own stunning work of mosaic art.
- The earliest known mosaics were found in a **Mesopotamian** temple dating back to the 3rd millennium BC.

- Made up of ivory, seashells, and stones, these decorative, abstract pieces laid the groundwork for mosaics made thousands of years later in Ancient Greece and the Roman Empire.
- Unlike the Mesopotamian mosaic-makers, however, **Classical** artists opted to create pictures, patterns, and motifs in their mosaics.

Image by the craf train

How to do Mosaics:

You need FOUR (4) basic things to make a mosaic:

1. **Foundation:** rock, concrete, tile, wood, tray, glass, pots, etc.
2. **Tesserae:** pieces of tiles, mirror, glass, seashells, etc. to form a design.
3. **Adhesive:** to glue the tesserae to the foundation.
4. **Grout:** to fill the gaps between the tesserae.

Equipment you will need:

- Tile pieces (Tesserae)
- Foundation for mosaic
- Design template
- Glass cutting tools (Tile cutter / Tile nipper)
- Glue
- Trowel
- Spatula
- Grout
- Sponge
- Bucket of warm water
- Varnish

Step 1

1. Instruct learners to select the material they wish to use:

Pieces of material used in a mosaic is called “tesserae”.

It can be glass, stones, seashells, porcelain, or anything else you can find.

Step 2

Pick the foundation to adhere the mosaic tiles on:

Tables, pots, birdbaths, trays, etc. Make sure the base is

strong enough to hold the weight of the tesserae and grout. Once you have decided on the foundation, clean it thoroughly to prepare it for the tiles.

Step 3

Find a pattern you wish to make into a mosaic:

Find patterns anywhere or use your imagination. For a first-time project you may wish to work with a simple pattern.

Step 4

Print out the pattern in the dimensions needed:

Lay it on a flat surface and lay out the tesserae. Use glass or tile cutting tools to cut the pieces to the desired size. You can also use a hammer to break pieces as well. Make sure the pieces are clean of any dirt before laying them out.

Step 5

Glue the tesserae on top of the surface:

Apply suitable glue onto the foundation. While still wet, gently affix the mosaic tiles by pushing them into the glue on the surface. Apply tiles starting in one corner of the design and work across in rows. Make sure you leave enough space

between pieces for grout. You may also choose to put the glue directly on the tile. Apply the glued piece directly to the foundation and press down to affix it in place.

Step 6

Let the glue set:

Time varies depending on usage. So, follow manufacturer recommendations. For pieces the home, the timing is roughly 24 hours.

Outdoor mosaics will need to set for 72 hours. Clean the mosaic tiles once more to

clear away any extra glue that may have risen to the top.

the
in

Step 7

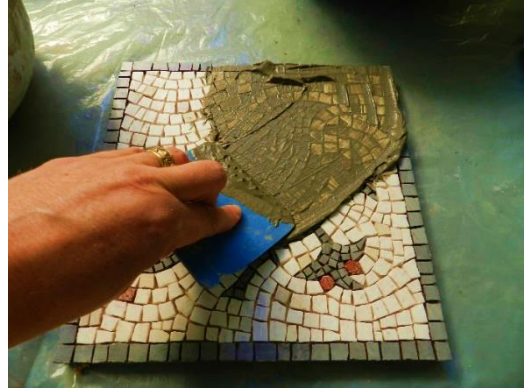

Prepare the grout mixture:

Mix the grout with water. It must look and feel like toothpaste.

Step 8

Apply the grout by using a spatula or a gift card:
Fill the creases between the tiles with the grout.
It should cover the mosaic enough to fill all the
gaps.

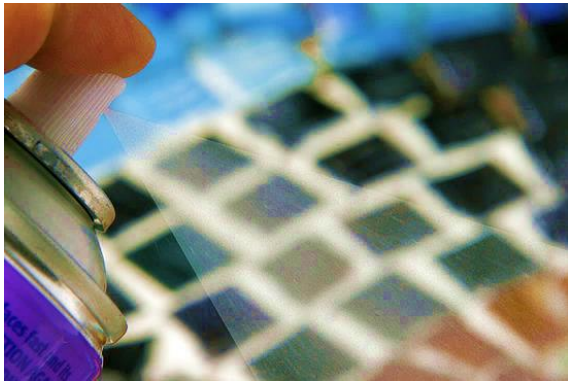

Step 9

Let the grout set for 20 minutes, or the time advised by the manufacturer:

Wipe the mosaic with a clean sponge or cloth and warm water. Rinse out the sponge or cloth regularly as you wipe away grout from the surface of the tiles. Clean the tesserae while the grout is still wet. When it dries completely, it will be very difficult to get rid of the unwanted grout.

Step 10

Seal the mosaic with varnish:

This will coat the tiles and safeguard against damage, especially for outdoor mosaics subjected to fluctuating temperatures and adverse weather conditions. It will also give a high gloss shine that will make the colours stand out.

WARNINGS:

Learners must wear safety glasses and use gloves while working on this project. The tile pieces can have sharp edges and, if they are breaking or cutting them, they want to reduce the risk of damaging their eyes or cutting yourself!

Equipment for mosaic:

Mosaic Tile Nipper

Mosaic Glass Cutter

Glue

Mosaic Grout Mix

Trowel

Spatula

Ice Cream Sticks

Sponge / Cloth

Safety Glasses

Bucket of warm water

Tesserae for Mosaic

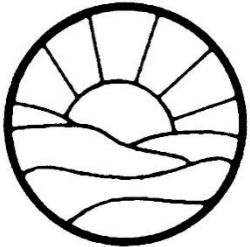

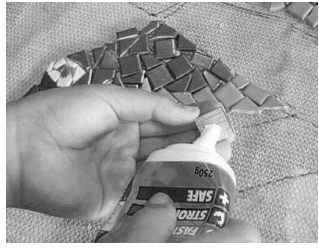

Gloves

Test**MOSAIC****Question 1**

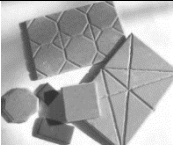

Look at the pictures in Column A. Underline the steps in Column B that matches the pictures in Column A. Number the steps in the correct order from 1 – 5 in Column C:

Column A Pictures	Column B Explanation of steps	Column C Order
1 	* Glue the tesserae on top of the surface. * Clean the mosaic tiles. * Apply the grout. * Select the material you wish to use. * Find a pattern you wish to make into a mosaic. * Pick the foundation for the mosaic. * Wipe the mosaic while the grout is still wet.	
2 	* Glue the tesserae on top of the surface. * Clean the mosaic tiles. * Apply the grout. * Select the material you wish to use. * Find a pattern you wish to make into a mosaic. * Pick the foundation for the mosaic. * Wipe the mosaic while the grout is still wet.	
3 	* Glue the tesserae on top of the surface. * Clean the mosaic tiles. * Apply the grout. * Select the material you wish to use. * Find a pattern you wish to make into a mosaic. * Pick the foundation for the mosaic. * Wipe the mosaic while the grout is still wet.	
4 	* Glue the tesserae on top of the surface. * Clean the mosaic tiles. * Apply the grout. * Select the material you wish to use. * Find a pattern you wish to make into a mosaic. * Pick the foundation for the mosaic. * Wipe the mosaic while the grout is still wet.	
5 	* Glue the tesserae on top of the surface. * Clean the mosaic tiles. * Apply the grout. * Select the material you wish to use. * Find a pattern you wish to make into a mosaic. * Pick the foundation for the mosaic. * Wipe the mosaic while the grout is still wet.	

Question 2

Match the picture in Column A, with the description in Column C.

Write the correct answer: (a, b, c, d, e, f, g, h, i, j, k, l) in Column B:

Column A Picture of Equipment	Column B Answer	Column C Description of Equipment
1 		a. Spatula b. Grout
2 		c. Gloves d. Water
3 		e. Tile nipper f. Tile cutter
4 		g. Pliers h. Safety glasses
5 		i. Glue j. Trowel
6 		k. Gloves l. Tesserae
7 		
8 		
9 		
10 		

Activity 9

Mosaic Picture Frame

Materials
needed:

Mosaic tiles (Tesserae)

A baseboard (Foundation)

Grout

Glue

Tile cutter

Tile nipper

A plastic knife / pallet knife / gift card

A sponge or cloth to wipe the excess grout off with

Bucket of water (Don't rinse the grout in the basin)

DIY mod-podge / varnish

Instructions

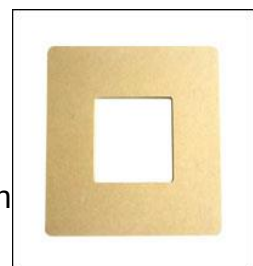

- You must always plan your design.
- You can do this by tracing around your art board on a piece of paper to get the correct size and designing your tiles to fit the space.
- Alternatively, you could design the layout of your tiles on a second baseboard and transfer them over to the first one once you are happy with it.
- Follow the 13 steps of how to create a Mosaic frame:

Mosaic frame (*Follow these steps, but create your own design*)

Use your imagination and create a masterpiece!

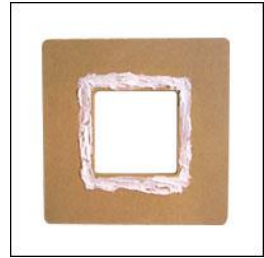

Step 1

The first step in the mosaic process is to find a rigid surface to mosaic. A Basic Picture Frame, Glass, metal, wood, ceramic, and other rigid surfaces are ideal. Make sure that you use the correct type of glue for each surface. A silicone product is more effective on non-porous surfaces. White glue is also very effective on non-porous surfaces.

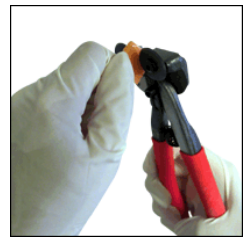

Step 2

After you choose your surface, it is time to design your piece. Your only design limitation is your own imagination. You can draw it on paper first or lay it out on your surface. You can choose to work from the outside in, or from the inside out. Lay down your adhesive in sections. Avoid using so much adhesive that it squishes up between your pieces. This leaves no place for the grout to go.

Step 3

If you want to cut and nip tesserae for your designs, it is very simple. You can use either a Tile Nipper or Wheeled Glass Nipper as shown here. You will simply put your tesserae in the "mouth" of the tool and squeeze down. Nipping and cutting allows you to cut pieces to specific sizes for your designs.

Step 4

Now that you have your first section of adhesive down, you must apply your tesserae (mosaic pieces). Place each piece on top of your adhesive as desired. You need to leave enough room for grout.

Step 5

Lay down your next section of adhesive. Work in small areas at a time. This keeps your adhesive from drying out if you are working slowly. It will also give you stopping points if you want to take a break. You don't have to do a project in one sitting.

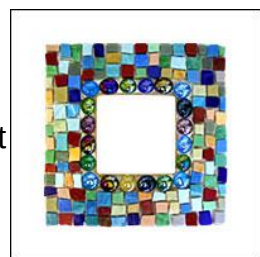

Step 6

Start applying the rest of your tesserae to your piece. Make sure that the pieces at the edge are straight. Work section by section until you piece is completely covered.

Step 7

Here we show the piece completely covered with tesserae. You should let your adhesive set for 24-48 hours before grouting. After it has cured for this amount of time you are ready to grout your piece. It is up to you as to what colour of grout you use. If the main theme

of your piece is darker tesserae, then you might want to use a lighter grout to contrast the tesserae and make it stand out. The opposite is true if you used light tesserae.

Step 8

Follow the instructions of the grout on the package. You will want to put your grout in a disposable container then add water to your grout until it has a consistency like toothpaste.

Step 9

If you accidentally add too much water, simply let it sit for a few minutes and it will thicken up, or you can add more grout. Stir until smooth.

Step 10

We suggest that you use Gloves when working with Grout. It is non-toxic, but it can dry your hands out. Apply the grout with a spatula or old gift card.

(Don't use your fingers because the sharp edges will cut you.)

Press it down in the spaces between your pieces. Sculpt it on your edges to make a nice smooth edge. Generously cover your entire piece.

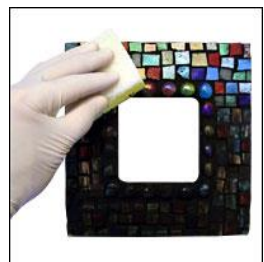

Step 11

Once you have covered your entire piece and filled all of the spaces, wipe off as much of the excess as you can with the spatula or gift card. Let it sit for 20-30 minutes or until the grout becomes hazy on the piece. The grout must not be totally dry.

Step 12

Now, take a very slightly dampened sponge or cloth and begin wiping the haze off. You can then use a dry cloth to remove the remaining haze and residual grout. Try to remove as much grout as possible. If you don't get it off now, it will be much harder to do so

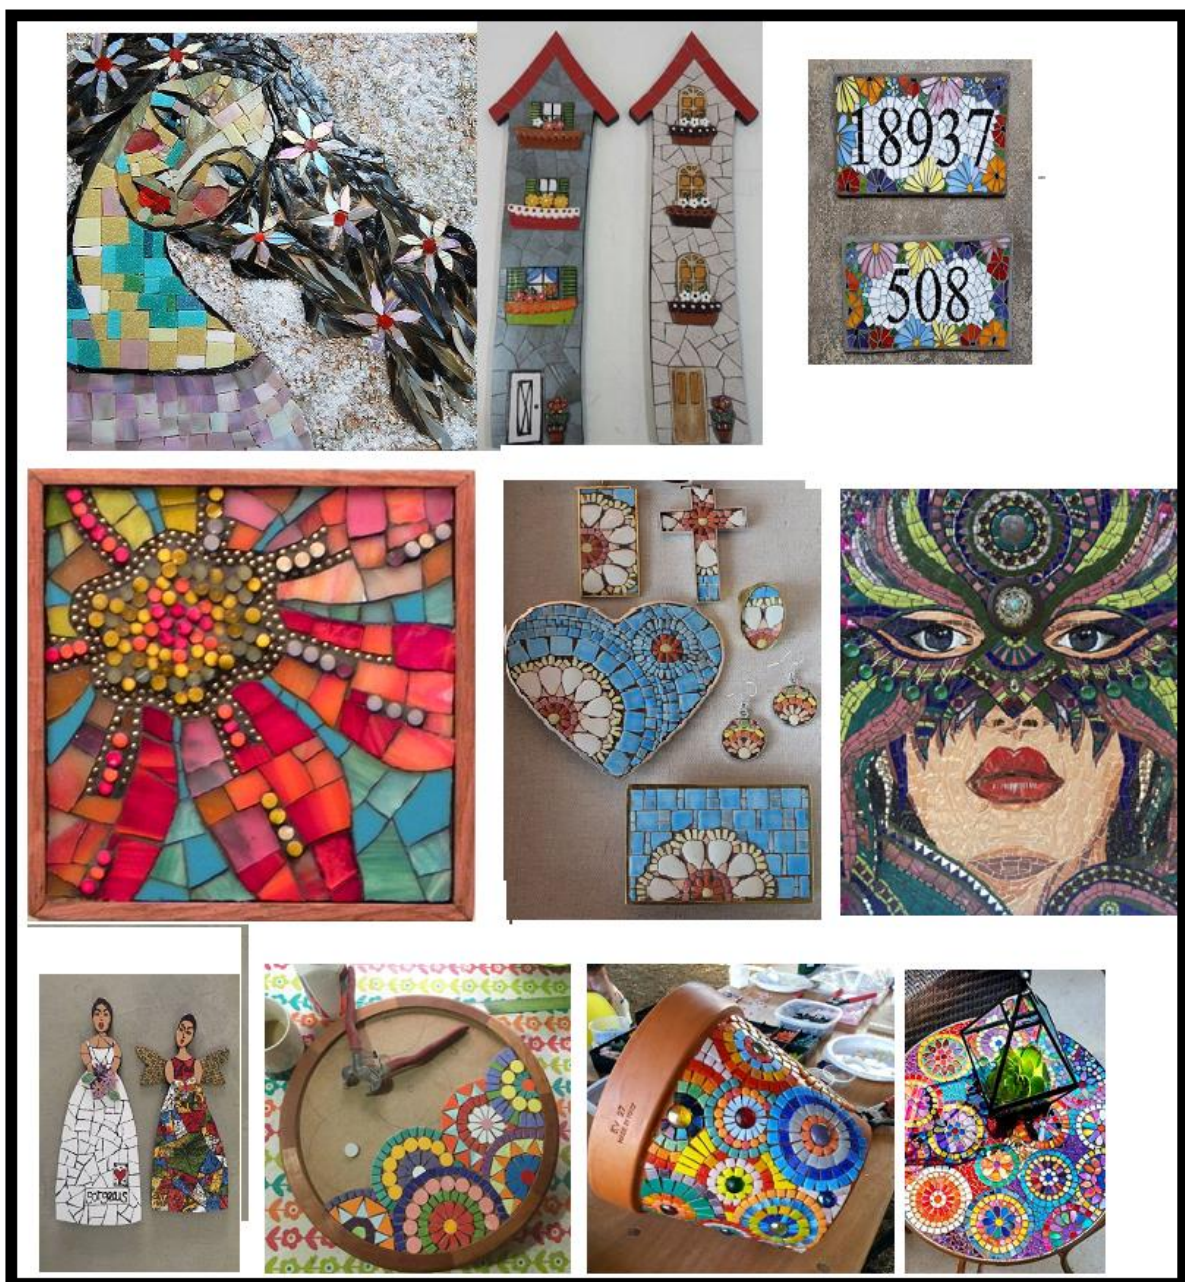

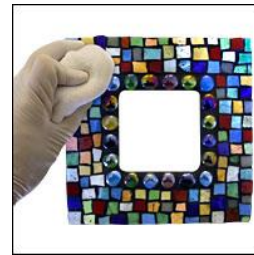

later. Clean each tile if you desire. Do not use paper towels, they flake off and stick in your grout.

Step 13

You are done with your grout.

Never wash grout in the sink!!!

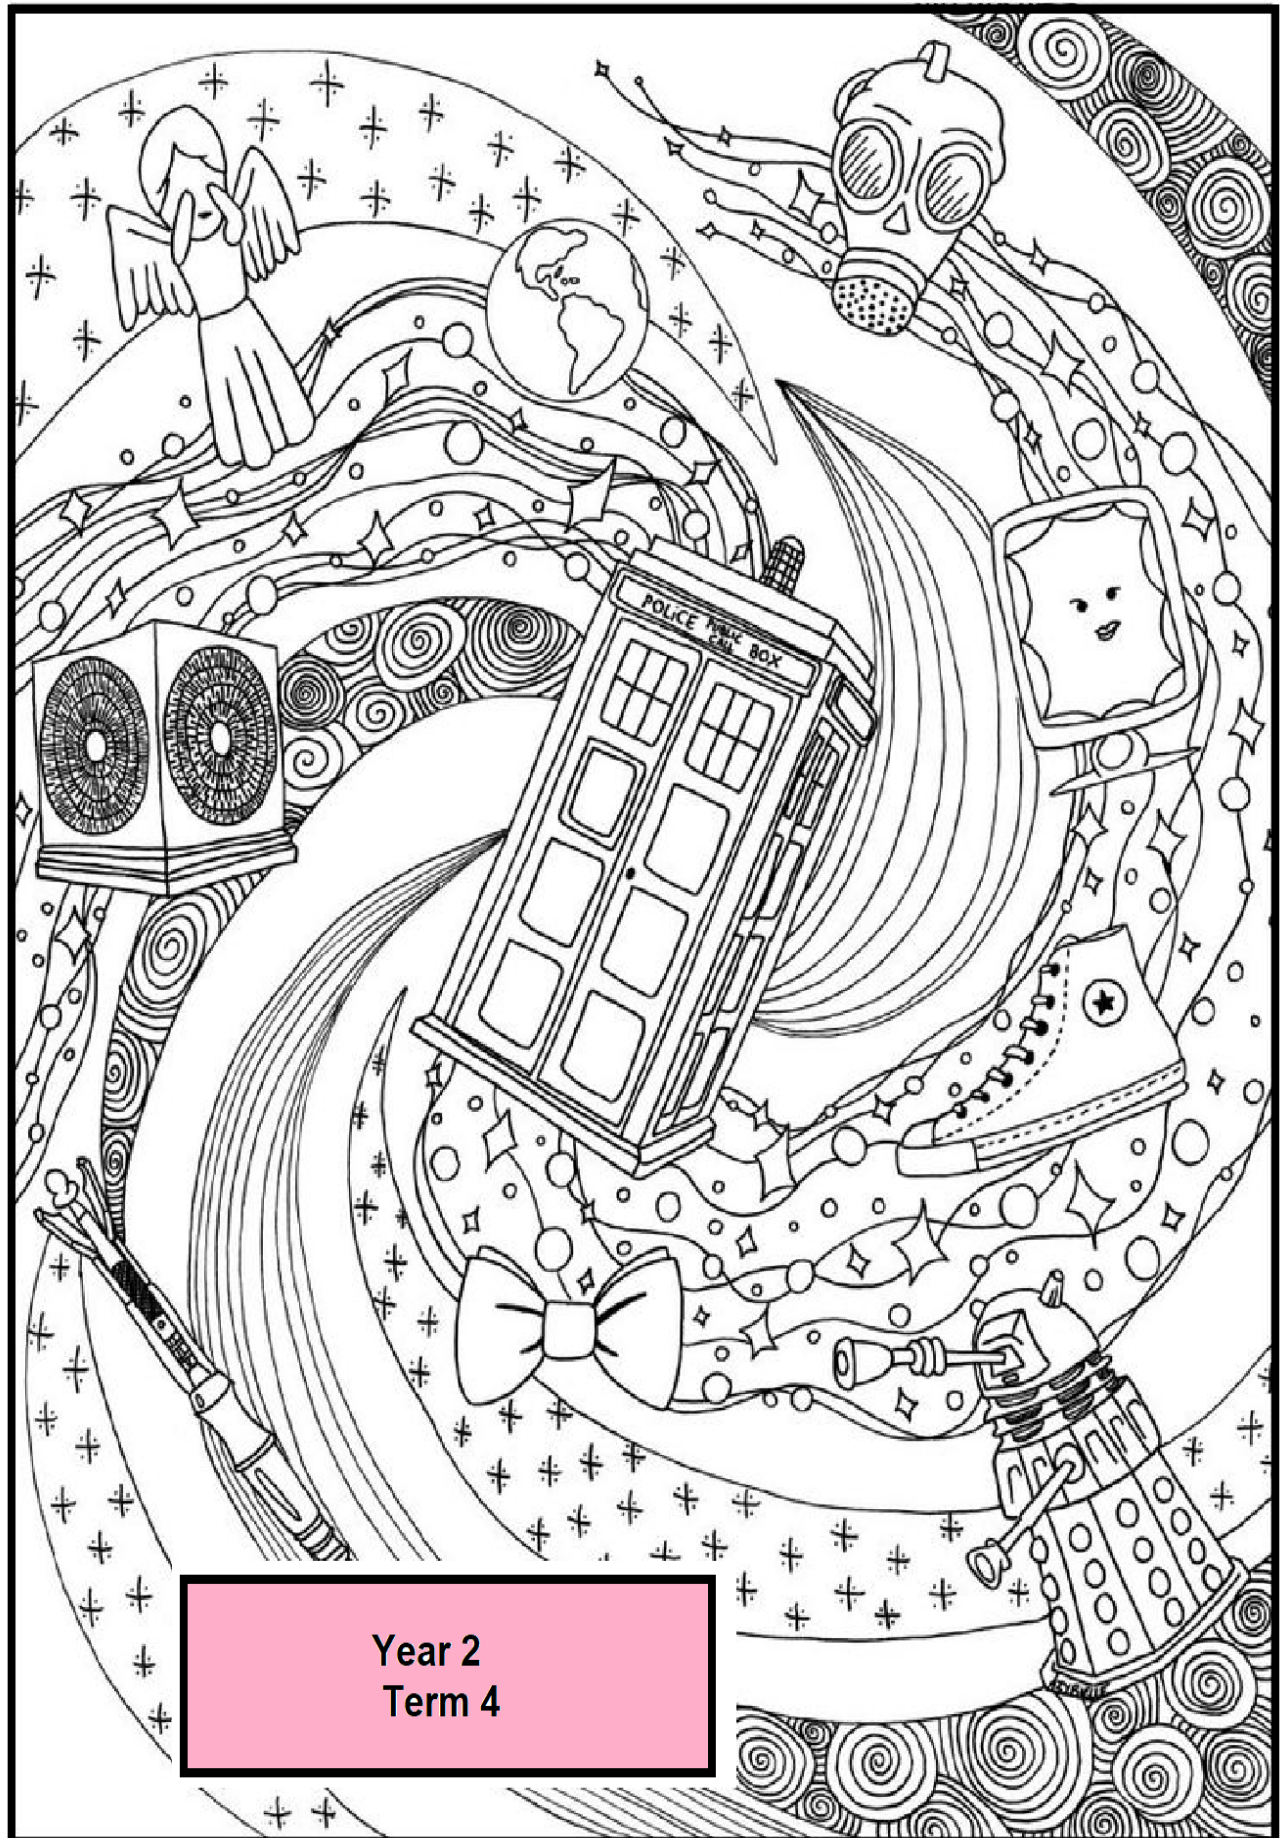

If needed, take a cloth or sponge and polish your piece up. If you did not mosaic the edges of your piece, you can finish it with an acrylic that matches your grout.

Formal Assessment:**Mosaic**

Output	1	4	6	8	10
Elements of art and Principles of design: Line Colour Shape Pattern Rhythm Movement	The learner did not attempt to use the art elements / principles. The artwork was not completed.	The learner cannot explain how to apply the elements / design principles to their artwork. Work not completed	The learner is vague in his/her description of how to apply the element/ design principles to their artwork.	The learner is basic in his/her description of how they used the art elements/ design principles in their work.	The learner explained how he/she used the art elements/ design principles in their work thoroughly and with great detail.
Creativity / originality Preliminary sketch drawn out design on object to be mosaic	The piece shows little or no evidence of original thought. There are no preliminary sketches.	The piece shows little evidence of original thoughts. There are attempts at preliminary sketches.	The learner's work lacked sincere originality. There are attempts at sketches but he/she do not show enough problem solving efforts.	The learner's work demonstrates originality. The learner has created several sketches in an effort to work through problem solving.	The learner's work demonstrates originality and shows evidence of planning and problem solving through complex sketches.
Terms / vocabulary Rhythms Direct method Tesserae Nippers Grout Adhesive	The learner disregarded craftsmanship and did not put forth effort for understanding. He/she did not ask for help or responded negatively to help to improve their craftsmanship/ understanding.	The learner showed poor craftsmanship or lacked understanding. He/she did not ask for help or responded negatively at times to help.	The learner showed average craftsmanship and understanding. He/she asked minimal questions and minimal effort to respond to help from the teacher	The learner showed average craftsmanship & understanding. The learner asked questions and responded to help from the teacher.	The work shows outstanding craftsmanship and was finished with a great deal of care. The learner asked questions and responded to help from the teacher appropriately.
Skills Placing Spacing Grouting	The learner did not finish the work.	He/she had sloppy mosaic placement with poor spacing. Grouting is sloppy and tiles are not polished off.	. Mosaic placement and spacing as well as grouting is sloppy.	The learner spaced tiles appropriately. The learner grouted appropriately.	Mosaic placement is very well done and grouting is well done.

Chapter 1

Visual Literacy

At the end of this activity, learners will be able to do the following:

- Know the importance of Elements of Art and Design Principles in Jewellery design.
- Understanding how to apply Elements of Art and Design Principles in designing jewellery pieces.

1.1 Art Elements and Design Principles

When it comes to creating jewellery, it is not just a case of starting to put beads on a string. To create something spectacular, you have to take the Elements of Art and the Designing Principles in consideration. You can make designing your next piece of jewellery much easier and more fun by paying attention to the elements and principles of design. All artists work with these principles, and it will help jewellers, too.

You can apply these elements to your designs every time:

Line, colour, shape, value and texture.

1. Line

Lines draw the eye around a piece.

Think about the line of your piece: will it lie gracefully against the body when worn?

2. Colour

Use colour to create an emotion, something the wearer will emotionally enjoy.

This is a very powerful principle to employ.

Create different emotions with different colours.

3. Shape

Shape is pretty self-explanatory.

Is the shape of a pendant graceful, dramatic, pleasing, or otherwise interesting?

How does it work with the line of your piece?

4. Value / Tone

Value / Tone describes how light or dark a colour is.

You can use colour and value / tone to create a range of feelings.

5. Texture

Texture adds interest to the piece.

Artists also work with the design principles of rhythm, repetition, movement, proportion, balance, variety, harmony, unity, and emphasis.

1. Pattern

Once the eye sees a particular shape, when that shape is repeated, it makes the eye comfortable.

Repeating a shape more than three times in a regular design makes it a pattern.

Patterns are enjoyable.

2. Emphasis

Emphasis is the placement of a single element, such as a stone or other focal element, to draw in the eye.

The effect is to make that point special by showcasing it.

3. Proportion, Harmony and Variety

Proportion and harmony are important to give a piece balance, and variety keeps it interesting.

This is only the tip of the iceberg, but the more you think about these ideas as you work through a design, the more you'll understand how to use these elements and principles, and the easier designing will become for you.

2. Background of beads and beadwork

At the end of this activity, learners will be able to do the following:

- Watch a few tutorials on how to do Beading.
- Know some history of Beadwork.
- Know the basics of **Beading**.
- Know which equipment to use when doing **Beading**.
- Do a worksheet on beads and beadwork.
- Watch the following Tutorials on how to do some Beading:
- https://youtu.be/wk3_oDSW_Bc
- <https://youtu.be/EFfDgO2kWcs>
- <https://youtu.be/R2f19afVzHE>

2.1 What is a bead and what is beadwork?

- A *bead* is a small, decorative object that is formed in a variety of shapes and sizes.
- It is made of materials such as stone, bone, shell, glass, plastic, wood or pearl.
- A small hole is drilled through it for threading or stringing.
- Beadwork is a craft of attaching beads to one another by stringing them with thread or thin wire or sewing them to cloth.
- Beads come in a variety of materials, shapes and sizes.
- Beads are used to create jewellery or other articles.

2.2 History of beadwork:

- Beads have been used in many cultures for centuries.
- The word "**bead**" comes from the Anglo-Saxon words "**bidden**" (*to pray*) and "**bede**" (*prayer*).
- Beads have been used as money and worn as jewellery.
- In early years, beads have been made from pebbles, shells, teeth, claws, clay, glass and more.
- Glass became an important material in bead making. It dates back to the Roman Empire.
- On this continent much beadwork still consists of natural material such as bone, coral, horn, ivory, seeds, shells, stones and pearls.
- Today beads are also produced from synthetic materials like glass and plastic.
- Today's sources for synthetic beads are China, Hungary, India and Poland.

2.3 Use of Beads

- Beads play an important role in modern fashion.
- They are widely used in the form of necklaces, bracelets, and earrings.
- Designers wow us with stunning contrasts of coloured gemstones; silver, gold, or copper metals; and beads carved into various shapes.
- Beading is a favourite pastime for many people who express their creativity through this ancient craft.
- The uses now include beaded souvenirs made of wire or fishing twine.
- It includes domesticated and wildlife creatures, bracelets, toys, and figurines.
- The list continues to grow with the artists' imagination.
- The appeal of beads and beadwork will continue to thrive as both a cultural expression and tourist attraction.

Figurines:

Necklace & Earrings: Bracelets & Bangles

2.4 How to string beads:

- Start to string a simple bead necklace or bracelet.
- Stringing beads is one of the most basic and easiest beading techniques used to make handcrafted beaded jewellery.
- Crimping finishes the ends of a necklace or bracelet by holding it together so it can be worn.
- The most common crimping method is to use beading wire and crimp beads.

2.5 Bead stringing and tools

- While several of the tools are used in bead string could be found in most toolboxes, or your tool drawer, those specially designed for jewellery making are the best.
- Feel free to use what you have at first but realise that you always need the right tools for the right job.

2.6 Tools

1. Round nose pliers

- They aren't the usual kind from your toolbox.
- The tips of the pliers are round.
- Their use is to make loops or curl pieces of wire.
- There need to be a spring in-between the handles.

2. Flat-nose pliers:

- These are your basic pair of pliers with a flat nose, but the difference with those made for jewellery making is that these are smooth on the inside of the nose.
- Those in your tool chest often have ridges inside for gripping.

3. Crimp pliers:

- Use this to press the crimps on the wire.

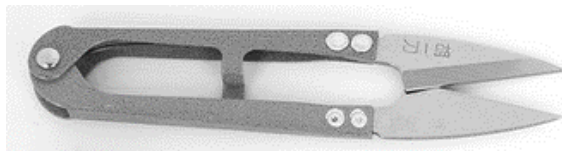

4. Wire cutters:

- You will need a good pair of wire cutters to cut beading wire (a flexible coated metal wire).

5. Scissors:

- Small scissors like those used for sewing are handy to cut thread.

6. Glue:

- It is handy to have jeweller's glue, but you can also use superglue.

2.7 Beads

- There are tons of different beads available.
- You can choose gemstones, crystals, pearls, glass and more.
- A visit to a bead store can set your imagination working on different combinations.

2.8 Findings:

- Findings are all the little components you need to connect the beads together.
- You'll need jump rings, ear hooks, clasps, caps and crimps.

2.8 Crimps:

Lobster clasps:

2.10 Rings:

Bead caps:

2.11 Beading board:

- Though optional, using a beading board aids in measuring and planning a beaded necklace design.

2.12 Measuring tape

- You need to measure the length of your necklace or bracelet.
- Add one centimetre to the length of your bracelet to prevent it from being too tight.

2.13 Stringing mediums for beads

- There are many types of stringing material to string beads.
- This includes silk, nylon, fishing gut, elastic bands, and beading wire.

Beading wire:

Clear bead string:

Beading elastic:

2.14 Types of beads

Most types of beads are made of natural materials and some, types of beads are made of synthetic materials.

Here is some samples of types of beads.

2.14.1 Synthetic beads:

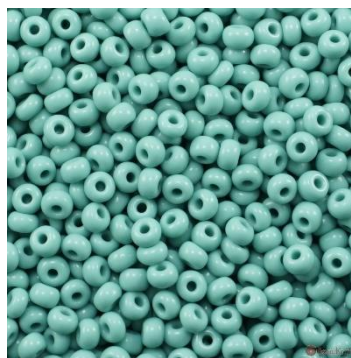

Glass beads

Plastic beads

Seed beads can be made of plastic or glass

2.14.2 Natural beads:

Wood beads

Pearls

Stones:

Shells

Crystals

Bones and ivory:

Activity

Question 1:

Draw a cross over the picture of the beads:

25

(1)

Question 2:

Indicate which beads are made of **natural** materials and which beads are made of **synthetic** materials. Underline the correct word underneath the pictures:

2.1 Pearls

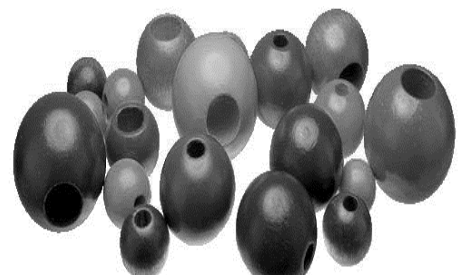

natural / synthetic

2.2 Glass

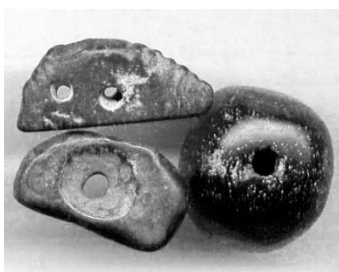

natural / synthetic

2.3 Wood

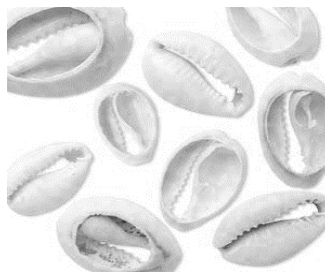

natural / synthetic

2.4 Stones

natural / synthetic

2.5 Shells

natural / synthetic

2.6 Plastic

natural / synthetic

(6)

Question 3:

Name the following types of beads. Choose the correct answer from the word box:

glass beads crystal beads wood beads seed beads shells stone beads

3.1

3.2

3.3

3.4

(4)

Question 4:

What do we call the following types of beadwork?

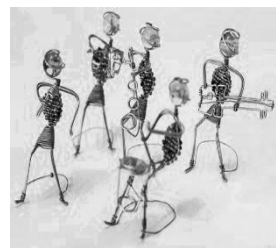

4.1 _____

4.2 _____

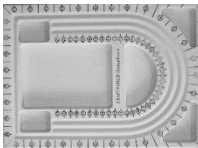

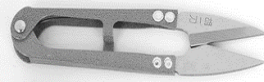

4.3 _____

4.4 _____

(4)

Question 5: Match the picture in Column A, with the description in Column C. Write the correct answer: (a, b, c, d, e, f, g, h, i, j, k, l) in Column B:

Column A Picture of Equipment	Column B Answer	Column C Description of Equipment
5.1 		a. Clasp b. Bead board c. Glue d. Round nose pliers e. Bead cutter f. Jump rings g. Crimp pliers h. Scissors i. Wire j. Flat nose pliers k. Wire cutter l. Crimps

Chapter 2

Creating in 2D

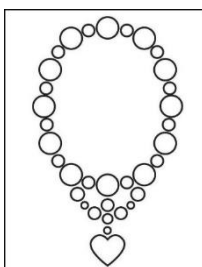

At the end of this activity, learners will be able to:

- Find pictures of different jewellery pieces.
- Applying Elements of Art and Design Principles in designing the pieces.
- Understanding how to assemble the jewellery design.

Activity2

Designing a jewellery piece

- Instruct learners to collect photos and images of different kinds of jewellery from magazines, pamphlets from jewellery stores, internet images, etc.
- Create a collage of the different jewellery pieces you collected.
- Make a theme page where you choose a view pieces of jewellery you would like to make with beads.
- Make sure you are creative adding some pictures that are coloured and some that are done in HB pencils but with tones and textures.
- Choose a template and use the elements of art and design principles to decorate a necklace.
- On the following page draw matching earrings and a bracelet and plan what you will be using for these jewellery pieces.
- Make sure you plan the materials as well and do some research work on how to assemble your jewellery piece.
- Read the rubric before you start with your project.

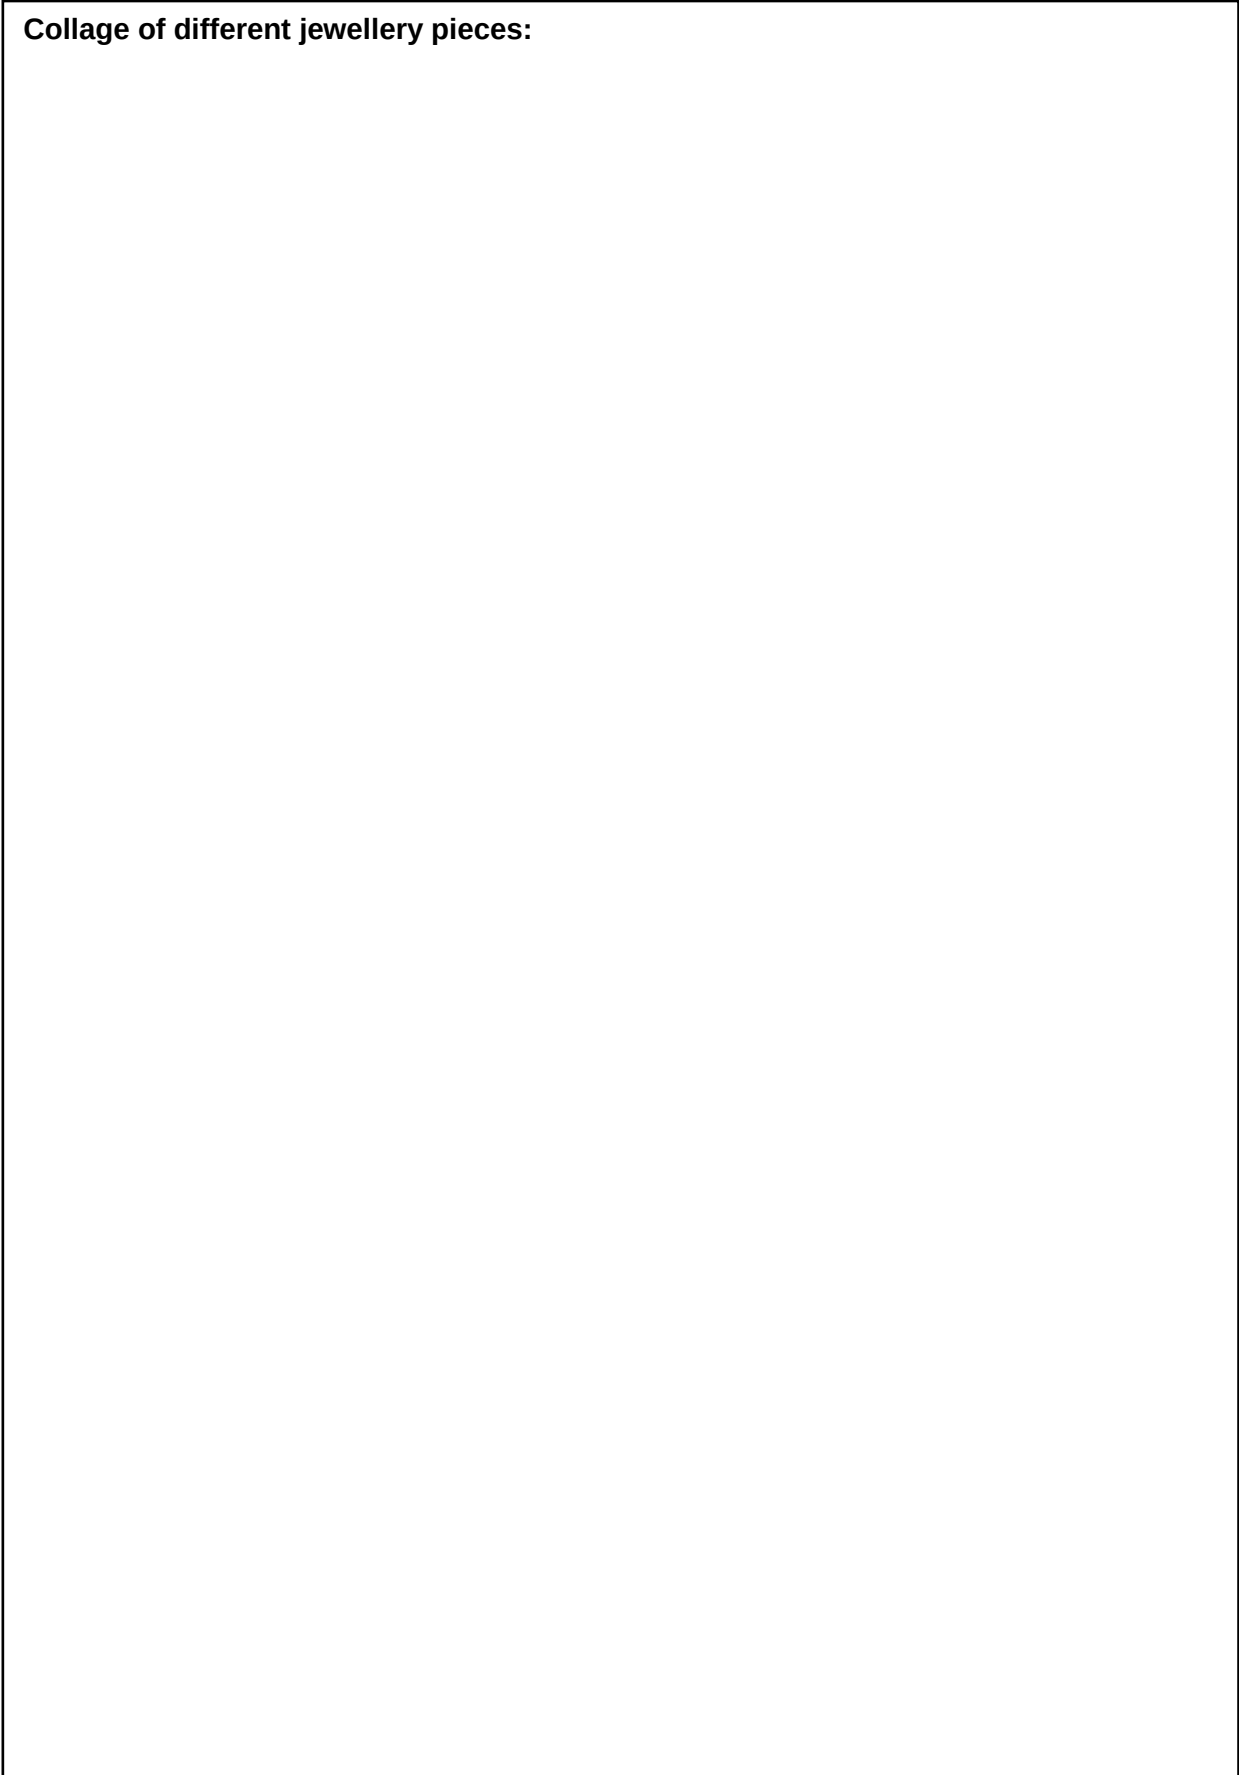

Rubric

7: Perfect 6: Excellent 5: Very good 4: Good 3: Moderate 2: Weak 1: Poor

	7	6	5	4	3	2	1
Elements & Principles Demonstrates excellence in the effective integration and manipulation of the Elements and Principles of design. They are integral components of the work. The learner carefully considers the Elements and Principles when planning the work.							
Originality and innovative thinking Demonstrates original vision, new ideas, risk taking and creative articulation of the Elements and Principles of design.							
Time management Clear time management skill used. Developed systems to use time allocated to the fullest.							
Technical Competence and Skill with Materials and Media Materials and media are used effectively to express ideas. Demonstrates mastery of new techniques and processes.							
Personal Development The project works in service of a larger, personal vision. There are evidence of development of personal ideas and artistic style.

Collage of different jewellery pieces:

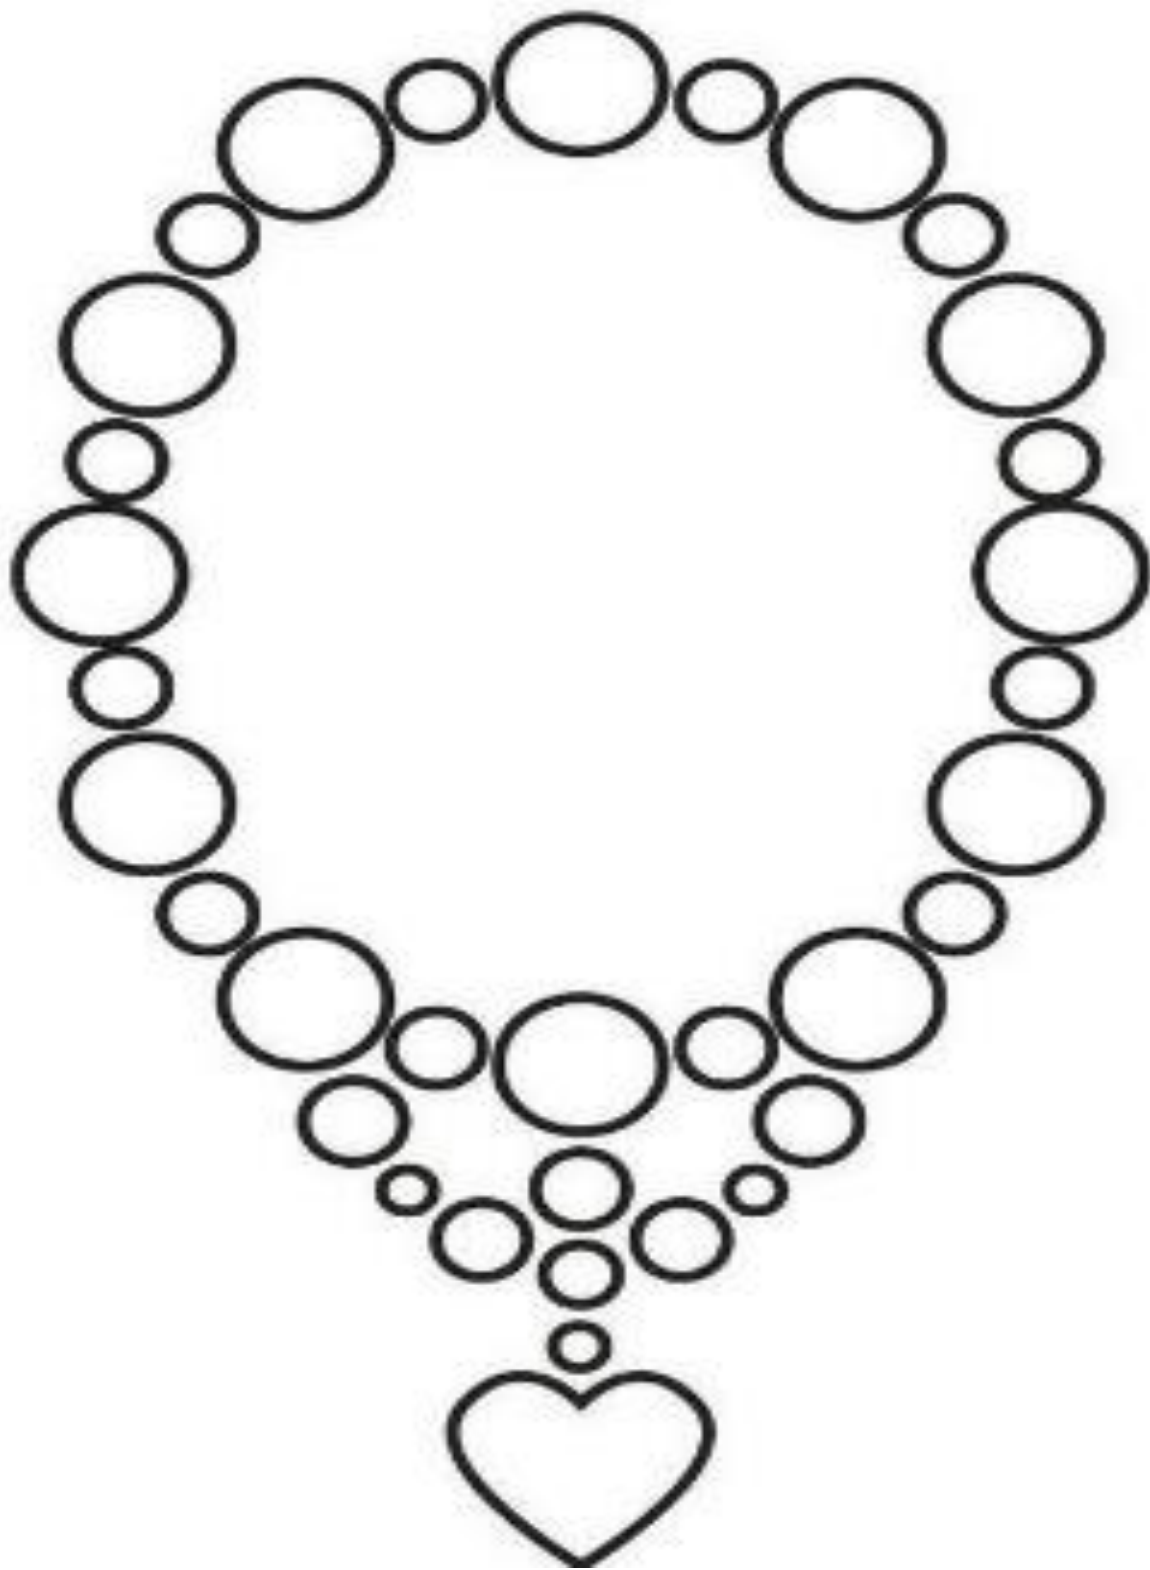

Theme page where learners choose a view piece of jewellery they would like to make with beads:

Choose a template and use the elements of art and design principles to decorate a necklace. (1)

Choose a template and use the elements of art and design principles to decorate a necklace. (2)

Draw matching earrings and a bracelet.

Decorate it and colour it in.

Write down what equipment you will be using to create these jewellery pieces.

Chapter 3

Creating in 3D

At the end of this activity, learners will be able to do the following:

- Applying Elements of Art and Design Principles in making jewellery pieces.
- Know how to use bead elastic to string a basic beaded bracelet.
- Know how to tie a secure knot with beaded elastic.
- Know how to use bead wire and findings to string a basic beaded bracelet.

One of the simplest and most inexpensive ways of starting out on your jewellery making journey is to make stretch bracelets.

No specialised tools are required.... just a knowledge of how to tie a strong and secure knot to make your bracelets durable. Always select the largest diameter beading elastic that will comfortably fit through your beads. This will minimise abrasion from the beads against the elastic and prolong the life of your bracelet.

How to String a Stretch Bracelet

1. If you want to make a stretch bracelet, you will first want to choose a strong elastic cord, such as Elasticity in 1mm diameter.

2. Pre-stretch the elastic to get rid of any "wiggles," and to make sure your bracelet will fit just right.

3. String your beads according to a pattern, or in any order you choose to create your own design.

4. Knot the end of your stretch cord using a surgeon's knot, or a simple secure knot. Stretch the bracelet to make sure the knot holds.

5. Dab some strong glue or clear nail polish on your knot to seal it. Allow to dry.

6. Once you have allowed the knot to dry, test the knot to make sure it holds.

7. Snip the ends of your elastic, leaving a very short tail, so the knot does not wiggle loose. You can also tuck the tail into a nearby bead to hide it.

8. Your DIY stretch bracelet is ready to wear!

How to tie a secure knot:

Step 1

- Cut a 30cm piece of Stretch Magic.
- Pre-stretch elastic by holding one end in each hand and pulling it. This is especially helpful with narrower diameter elastic so that it doesn't stretch through wear and become baggy on your wrist.
- String your chosen beads.

Step 2

Bring the ends together, crossing one cord over the other.

Step 3

Wrap the front cord over the back cord and bring it back to the front to form a half knot. This first half knot will hold the beads in place so that you can continue tying the knot.

Step 4

Form the two cord ends into a circle with one crossing in front of the other.

Step 5

Form another half knot by wrapping the one over the back one.

front

Step 6

Wrap it around a second time.

Step 7

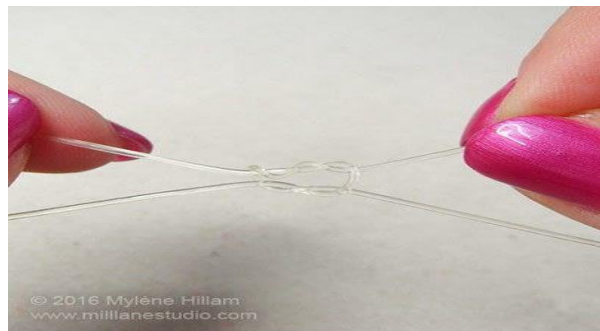

Pull the knot up tightly:

First, pull the two cord ends.

Then pull the two beaded ends.

Next, pull one cord end and the opposite beaded end.

Repeat on the other side. The knot should now be tight.

Step 8

Apply a dab of glue or clear nail polish to the knot for added security. Trim the ends to 6mm. Work these ends in through the beads closest to the knot.

How to string - Using a crimp bead and wire

In order to make a bracelet using beads and wire, you must begin by adding a crimp bead.

First, gather your materials together. You will need:

- 1) Wire - It must be strong enough to hold your beads together and flexible enough so that it sits well around your wrist once it is finished. The wire comes in different colours and strengths.
- 2) Measuring tape- You will need this to measure the length of wire for your bracelet. This length also typically includes about two extra cm on both ends. You will need this in order to thread the beads through it once you begin and again at the end. This helps to give added strength to your bracelet so that it does not fall apart.
- 3) Wire cutters – Be careful to cut with scissors. Heavier wire will need wire cutters.
- 4) Crimp beads - They come in various sizes.

5) Jump rings - They are small, round wire pieces that are used to hold the clasp to the wire. They are also used to hang charms, and to attach chain links and beads in various designs.

6) Crimper tool or flat nose pliers - This is used to pinch the crimp bead down in order to hold the bracelet together.

7) Clasp – This is to open and close the bracelet.

8) Beads – Any beads of your choice.

You will add crimp beads twice - once at the beginning and once at the end. Adding crimp beads will keep the beads from falling off the wire and it holds the bracelet in place.

Step 1: Putting the Pieces Together

Once you have cut your wire, put a crimp on one end followed by a jump ring. A medium sized jump ring in a package of small, medium and large will work well for most projects. Use a larger jump ring if you are using heavier beads.

Step 2: Looping the Wire

Next, loop the wire through the jump ring and pull the end down about 2cm through the crimp bead.

Step 3: Tightening the Crimp Bead

Pull the crimp bead up so that it fits snugly against the jump ring.

Step 4: Using the Crimper Tool

Crimping will help to keep the rest of the beads in the bracelet from falling off the wire. (If you do not have a crimper tool, you can use the flat nose pliers.)

Take your crimper tool and press the handles together to crimp the bead

Step 5: Adding Your First Bead

Once you have finished crimping, add a spacer bead or any bead of your choice to begin your bracelet. That's it! After you have completed this part, the fun of creating your bracelet begins using beads of various shapes, colours and textures. Have fun! Use your imagination and create your own masterpieces in jewellery!

Step 6: Ending the Bracelet

To end the bracelet, you have to do the same as in the beginning, but now you must add a clasp. First, thread the crimp onto the wire. Loop the wire around your clasp.

Pass the end of the wire back through the crimp, so that the loop of wire is closed. Work the wire through the beads. Now is the time to pull the loop as tight as you want it to be, because after you finish crimping, the loop will be permanently fixed.

Next, use specialty crimping pliers, or use

the flat nosed pliers as follows: Line up the crimp in the tip of your pliers as straight as possible. Hold your pliers at a right angle to your wire. Carefully squeeze down on your pliers and squash crimp flat. Your loop should be secure and permanent.

Rubric**INSTRUCTIONS**

1. Look at the beads that is available.
2. Make use of an A4 paper and a pencil.
3. Design two necklaces.
4. One must have an elastic string and one must be with wire and findings.
5. Make sure that the colours matches.
6. Use the Elements of art and Designing Principles in your designs.
7. Collect all the beads and accessories that you will need to make your design.
8. Make use of all the techniques that you have learned in class.
9. Be creative.
10. Make a sequence of the same techniques.
11. Enjoy it!

Assessment:

Your design and jewellery will be assessed on the following:

Criteria	Possible mark	Real mark
1. Creativity. "outside the box"	5	
2. Did you use Art Elements & Design Principles?	5	
3. Do the colours match?	5	
4. Will the design be usable?	5	
5. Execution – Elastic – Secure knot	5	
6. Execution – Wire & Findings	5	
7. Sequence of the same techniques	5	
8. Will it sell on the market?	5	
Total	40	
General comments of the assessor:		

Rubric:

Outstanding	5	• Effort far beyond that is required • The "wow" factor is evident
Very good	4	• Good evidence of effort • Technically good
Average	3	• Adequate • Displays understanding, but lacks imagination
Poor	2	• General lack of commitment • No evidence of original thought
Unacceptable	1	• Very little or no work – work incomplete • No effort

OR

Create in 3D

By the end of this chapter, learners need to be able to:

- Construct a 3D product.
- Read and understand the rubric and instruction sheets.
- Work with his/her hands effectively in creating a 3D product.
- Make a reproductive product and work out costing of a product.

What is pewter?

- Pewter is a malleable metal alloy.
- It is traditionally composed of 85 -99 % tin mixed with other components.
- Pewter was only used for the first time during the bronze age in the Near East (Turkey, West Africa, and Egypt)
- Pewter was used for decorative metal items and tableware.
- Until the various developments in pottery and glassmaking during the 18th and 19th centuries. Pewter was the chief material for producing plates, cups, and bowls until the making of porcelain.

Creating 3 D letters, picture frames etc. with foil and paints

Materials needed

- Hard cardboard/wooden letters o polystyrene letters.
- Heavy duty foil
- Glue gun or rope or white thick craft glue
- Paints or shoe polish
- Mod podge
- Aluminium foil
- A pencil to draw your designs
- Scissor to cut the foil
- Regular whit glue to put on the aluminium so it will stick to the letters
- Sponge
- Newspaper to work on

Instructions

Step 1

Instruct learners to read through the instructions and listen to the educator who will explain this activity step by step.

This activity will be done in the art dairy.

Complete this activity step by step and if they need help must always ASK.

- Make a pre drawing of the pattern you are going to make on your letters
- Do this sketching in your art dairy.
- Get some inspiration from the internet or use Pinterest to guide you in the letters or frame you would like to make.
- Here is a few samples of letters made with the materials above.

- The teacher will provide learners with the wooden letter / cardboard or polystyrene letter.
- Draw the design in pencil on the letter base.
- Make sure to leave room between the elements for the foil to mould around them.
- Try to have everything about a cm apart.
- Add swirls and some dots, if they want to create a simplified letter or go wild and create something reflecting your personality.

Step 2

- Run a bit of white glue or use a glue gun or string along the pencil lines.
- You want the glue line to stand tall and be about a half a cm wide.
- A toothpick will help you to apply the glue so that it will not be too thick or thin.
- Don't worry if your lines are a little bumpy and irregular.
- The foil will hide most of it.
- Any bumpy bits that do show through will add to the metallic charm.
- Wait until the glue dries.

Image by whatchaworkinon

- The glue goes on white and dries clear. In the left pic, the left side is almost dry.
- When the glue is dry, you can go on to the next step if you want a 3D effect on the subtle side.
- If you want a more prominent design add glue once more.
- Wait until it dries.

image by watchaworkinon

- Learners can see from this close-up how you simplified the dots to allow room for the foil to mould around the elements.

STEP 3

- Cut a piece of aluminium foil large enough to cover the face and sides of the letter plus an extra half inch.
- It is better to cut the foil oversized and trimmed it once the face was glued down.

STEP 4

- Glue the aluminium foil to the face of the letter.
- Shiny side or matte side showing, your choice.
- It could be high gloss or matt.
- Worked from the top to the bottom, use your finger to apply a thin layer of glue to the letter face, making sure to get into all the nooks and crannies.
- Do about a third at a time, stopping in between to mould the aluminium foil to the design, getting it in and around all the elements with no glue puddles underneath.
- Leave the edges and the letter holes, or counters as the typography folks call them, until the whole face is glued.

STEP 5

- Cut the foil in each letter hole, leaving about a 5 cm overhang from the letter edge.
- In each letter hole, cut a slit in the foil toward each corner and then every along the curve.
- Let the image below guide you.
- Now's the time to trim any excess foil around the outer edge, leaving enough to wrap it around the letter and secure it on the back.

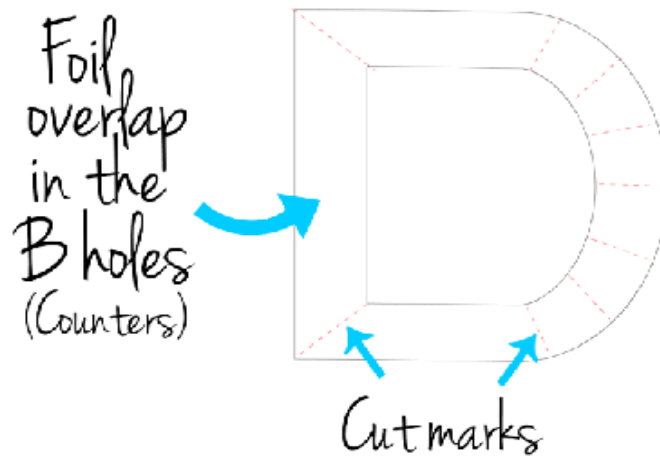

Image by watchaworkinon

STEP 6

- Apply glue to the edges of the letter holes, extending about 1/2" onto the back.
- Wrap the foil around to the back and secure.
- Depending on your letter, the foil may not cover the edges sufficiently in some parts thanks to the slits you had to cut on the corners and curves.
- Glue the outer edges the same way.

Step 7

Image by watchaworkinon

- At this point, the B still looks aluminium foil-y and firmly in the summer camp craft category.
- The shoe polish, however, will transform it.
- Using a soft cloth apply shoe polish to the face and then sides of the letter.
- The idea isn't to get one big black letter, but rather to catch the shoe polish on the design elements.
- Using small amounts at time, and a combination of dabbing and stroking worked best.
- The shoe polish doesn't dry so you have lots of time to get the coverage you want. Too much? Remove it. Not enough? Add more.

Image by watchaworkinon

- Be careful as you're handling it—fingers can easily smudge and remove the shoe polish you've already applied.

STEP 8

- Using a small sponge brush, apply a thick coat of Mod Podge over the face and sides of the letter.
- Start with the letter flat on your work surface, but soon elevated it so the Mod Podge wouldn't glue the letter to the newspaper.
- Allow to dry.
- When it's completely dry, the shoe polish is sealed underneath, and you won't be able to rub it off anymore.
- You are now allowed to repeat the process in doing another letter or doing a photo frame.

Here follows some more images (products) you could make

Image favecraft

Image by gifts for everybody

**Formal Assessment****Rubric**

Outcomes	Learner tick list	Marks allocation	Learner marks
Pre drawings of patterns were done and detailed drawing using art elements (texture and line were done)		3	
Learner used the same patterns and forms on the cardboard/wood product as he/she planned beforehand.		2	
Learner's approach to insert the patterns and forms were done recognizing proper planning		2	
The learner knew how to use at least 3 design principles especially the ones we learnt the whole year.		3	
The learner listened and responded positively to the educators assistance and support		2	
Step 1 – 4 were executed well		4	
When the learner placed the foil onto the product he/she followed the instructions given to them.		2	
The learner used polish well in between the patterns and used the sponge well		2	
The learner sealed his/her product with the podge		1	
The learner waited in between the steps for glue to dry.		2	
The end product were neatly round off		1	
The learner were able to stay in the time frame		1	
The learner reproduced a few (3-5) other products		5	

TOTAL 30 / _____

REFLECTION

At the end of this production line, learners will be able to:

- Reflect on their work
- Do a short costing of each product and will be able to show how she/he came to the production cost as well as have an idea how to put a profit margin on the work they produced.

Basic information on costing a product to be sold at a profit

- Putting a price tag on all your time, work and creativity can feel like the hardest thing in the world.
- Too high, no one will buy it.
- Too low, you won't be able to keep your business running.
- How do you find that sweet spot? We've got some tips to help you nail it.

Activity 7

(7)

How to do the costing?

Instruct learners to do this in their workbook.

Use the steps below to guide you.

After completing this activity take the book to their teacher and explain how they got to the selling price of the product.

They may redo this after the teacher gave her/his opinion and they have to then represent their costing model.

Step 1

- Start by scoping out your competition.
- Figure out the range of pricing on similar products.
- And remember to look at how successfully other sellers are moving their goods, too. You may notice a seller with high prices, but no sales — which could be an indication those prices are too high for the market.
- Once you've gotten a sense of the range, the best bet is to price your items right in the middle. If you're using higher quality materials or there's something truly unique about your specific craft, you might skew higher. (But if you do this, you've gotta make sure your marketing really stands out!)
- If you're just starting out and facing steep competition, try pricing yourself just a bit below the average price to draw more people in.
- You can work your prices back up once you establish a customer base.

Step 2

- How much you're spending on supplies directly affects your ability to sell your product at a fair price AND make a decent profit.
- When sourcing your raw materials, never pay retail price (did you hear that in the back?).
- Do your best to secure all your materials wholesale, or at least on sale.

Test/Exams

Complete the test on the given question paper.

Teacher may have an open book test.

After the marking of the work, you need to paste the question paper into your workbooks.

Your parents need to sign the test and give his/her opinion.

OR

2. Costing

At the end of this activity, learners will be able to do the following:

- Know how to calculate expenses.
- Know how to use a basic formula to calculate cost per product.
- Know how to calculate profit.
- Do a worksheet on costing.

Beading is a fun hobby and can be quite lucrative if you can find your market.

There are many ways to sell your beaded jewellery:

- You can have parties with your friends and family.
- You can set up a booth at a craft show or flea market.
- You can sell online.

One thing that a lot of people have an issue with is correctly pricing their creations.

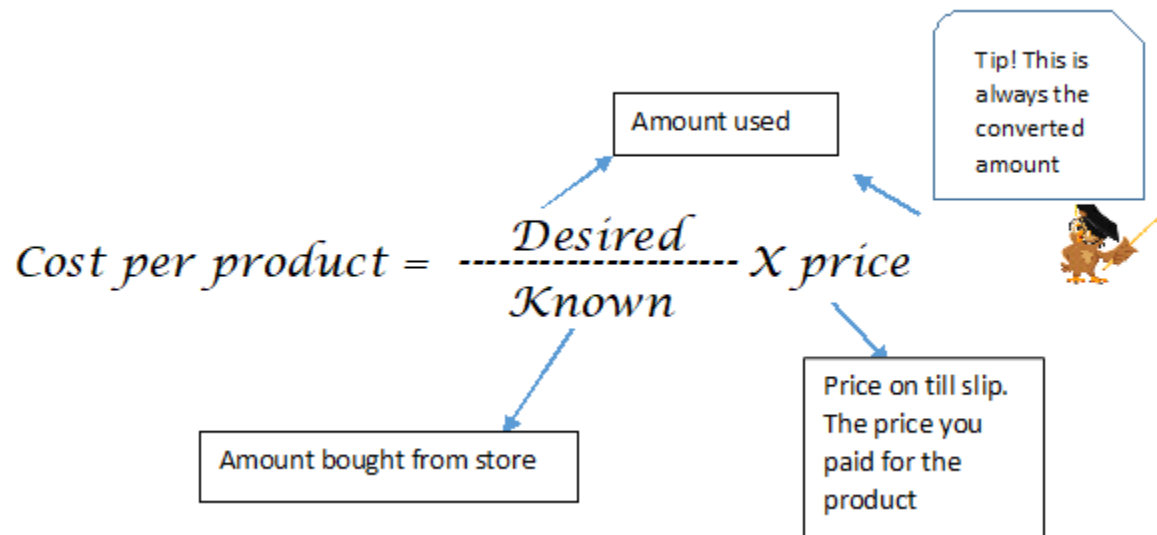

There are several things that you should take into consideration when pricing your handmade jewellery. You have to take in consideration exactly how much product you have added into your creations before you decide how much you can get for it. If you are starting to do some beading, start small. Buy your beads and findings (bead caps, earring wires, beading cord, etc.) on the cheap and **know exactly how much you paid for them.**

Calculate the expenses.

Step 1

The first step in costing, would be to calculate the cost for one product.

Use your **formula** to determine the cost of your product:

Example

- You used 10 large beads.
- There are 100 in a packet and it cost R30 for the packet.
- Answer: R3 for 10 large beads.

$$\text{Cost per product} = \frac{10}{100} \times R30$$

Amount used

Amount bought from store

Price on till slip. The price you paid for the product

Tip! This is always the converted amount

You

Remember:

They have to do this step with **ALL** the items that they use in the product.

If they want to calculate the cost of **ONE** bead, just divide your **answer** by the **amount of beads used**. Example: $R3 \div 10 = \underline{R0.30}$ per bead.

Step 2

To get the total cost per product, they have to add all of the **costs** per items used to create the one product.

Material	Base Cost	Total Used	Total Cost
Large Blue Beads	R0.30 per bead	10	R3
Small Light blue Beads	R0.20 per bead	10	R2
Small Dark blue Beads	R0.20 per bead	10	R2
Bead elastic	R0.05 for 1cm	45cm	R2.25
Cost per bracelet = R9.25			

Step 3

You have to add labour costs.

Example: You are making 10 bracelets.

One takes about 30 minutes to make.

One bracelet cost R9.25 and you work for R5 an hour.

How much will it cost to make 10 bracelets?

Cost = Time + Material

Material/Time	Amount of Products	Cost for one	Total Cost
Labour (R5 per hour)	10	R2.50 (30 min)	R25
Bracelets	10	R9.25	R92.50
Total cost to make 10 bracelets			R117.50

How much can you charge for your Beaded Jewellery?

To know exactly how much, you can get for your creations is going to take some serious trial and error.

The general rule with retail sales is to triple your expenses to find your selling price.

This means that, if you've made that blue bracelet with a total cost of R9.25, you should sell it for R27.75 (or round it off to R30.00) in a retail situation.

However, you'll need to think about how and where you're going to sell before you put a price tag on your work.

The best advice would be to try a couple of pieces at different prices and see what happens. If they sell like hot cakes, you may have priced them too low. If you're not selling anything at all, your prices are likely too high.

Also take into consideration that you may have hit on a trend and are making and selling things that people really want.

Taste is probably one of the biggest factors when a buyer makes a purchase.

With a little luck and a lot of style, you should at least be able to get started in the handmade beaded jewellery business.

Good luck!

Test

1. You have to make a bracelet for a client.

She wants you to use the following items to create the bracelet:

- a) 22 x purple glass beads
- b) 21 x flat silver square bead fillers
- c) 1 x jump ring
- d) 1 x heart pendant
- e) Elastic bead string

2. Design the bracelet. Draw it in the block.

7)

3. What tool will you need to open and close the jump ring?

(1)

4. Calculate the expenses:

- (a) Use the formula to calculate what the purple beads will cost:
- (b) You used 22 purple beads.
- (c) There are 50 in a packet and it cost R40 for the packet.

- Answer: R_____ for 22 purple beads.

$$\text{Cost per product} = \frac{\text{Amount bought from store}}{\text{Amount used}} \times \text{Price on till slip. The price you paid for the product}$$

Tip! This is always the converted amount

(4)

- b. Calculate the costs for **ONE** purple bead:

(3)

- c. Insert your answer and complete the table to work out total cost for the bracelet:

Material	Calculated Cost for items used	Total Used	Total cost
22 Purple glass Beads	R_____ per bead	22	R_____
21 x flat silver square bead fillers	R1.20 per bead filler	21	R_____
1 x jump ring	R0.05 per ring	1	R_____
1 x heart pendant	R4 per pendant	1	R_____
Bead elastic	R0.05 for 1cm	45cm	R_____
Cost for bracelet = R_____			

(7)

- d. Do the calculation to show how much the bracelet will cost when you add labour costs.

It will take you about **30 minutes** to make the bracelet and you work for **R5** an hour.

Cost = Time + Material

Material/Time	Amount of Products	Cost for one	Total Cost
Labour (R5 per hour)	1	R_____	R_____
Bracelet	1	R_____	R_____
Total cost to make 1 bracelet			R_____

(5)

- e. Do the calculation to show how much you will sell the bracelet for if you have to triple your cost?

(3)

Total 30
