

Electricity (continues)

Types of lights

- Incandescent lights.
- Energy saving lights.
- Light emitting diodes (LED)

1. Incandescent lights

- It is used for stripping and cutting of wires.

Advantages

1. It is inexpensive (cheap).
2. Its easy to install.
3. Its easier to dim.

Disadvantages

1. It uses more electricity.
2. Life span is short.
3. It is energy insufficient.

2. Energy saving lights

It is a source of artificial that employs advance technology to reduce amount of energy used.

Advantages

1. Energy savings.
2. Longer lifespan.

Disadvantages

1. High initial cost.
2. Not easy to dim.

3. Light Emitting Diode(L.E.D)

It is a semi conductor-conductor light source that emits light when the current flows through.

Advantages

1. Available in different colours.
2. Longer lifespan.

Disadvantages

1. They are expensive.
2. Can get damaged due to high voltage sometimes.

Subject : Maintenance

Grade : Year 2

Date :

Question : 1

1.Name any five building and plastering materials.

1.1 _____

1.2 _____

1.3 _____

1.4 _____

1.5 _____

Marks: 15

Time : 30mins

(5)

Question:2

1. Identify the following building and plastering materials.

1. _____

2. _____

3. _____

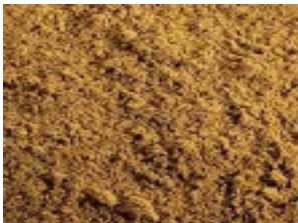

4. _____

5. _____

6. _____

Question:2

1. _____

2. _____

3. _____

4. _____

5. _____

6. _____
