

Simple Electrical Circuit

Connect a Light Switch To A Lamp

Step 1 : Turn off the Power.

Step 2 : Remove the Plug.

Step 3 : Identify the Wires

Step 4 : Connect the Wires.

Step 5 : Secure the Connections.

Step 6 : Test the Connections.

Step 7 : Reassemble the Lamp.

Fault Finding On Electric Appliances

Step 1 : Unplug from the power source.

Step 2 : Start looking for actual problem.

Step 3 : Fix the cause of damage.

Step 4 : Reassemble all parts.

Step 5 : Test whether its working properly or not.

Repair Damaged Wire Or Loose Connections

Step 1 : Disconnect the cable before repair work.

Step 2 : Use strippers to remove insulation.

Step 3 : Join corresponding wires together.

Step 4 : Solder the joints of the wires.

Step 5 : Insulate each of the inner wires.

Step 6 : Cover the entire lead.

Test The Flow Of Current Using A Multimeter

Step 1 : Turn the Multimeter's selection knob to ohms.

Step 2 : Plug the black probe wire into the corresponding port.

Step 3 : Plug the red probe wire into the ohm's jack.

Step 4 : Tap the red and the black probe tips together to ensure its reading less than or equal to 0,5 ohms.

Step 5 : Check the Multimeter is working correctly.

Step 6 : Turn the selection knob to either AC or DC volts, depending on what to be tested.
