

Mathematics

Year 3

Learner Book

This book was developed with the participation of the Department of Basic Education of South Africa (DBE) using the DBE ~~State~~ (Sasol Inzalo)

YEAR 3

CONTENTS

TERM 1

UNIT 1: Whole numbers: Counting, ordering, comparing, representing and place value

UNIT 2: Whole numbers: Addition and subtraction

UNIT 3: Whole numbers: Multiplication

UNIT 4: Whole numbers: Division

UNIT 5: Ratio and rate

UNIT 6: Common fractions

UNIT 7: Decimal fractions

TERM 2

UNIT 1: Whole numbers: Counting, ordering, comparing, representing and place value

UNIT 2: Number sentences

UNIT 3: Whole numbers: Addition and subtraction

UNIT 4: Whole numbers: Multiplication and Division

UNIT 5: Common Fractions

UNIT 6: Length

TERM 3

UNIT 1: Whole numbers: Counting, ordering, comparing, representing and place value

UNIT 2: Number sentences

UNIT 3: Whole numbers: Addition and subtraction

UNIT 4: Properties of 2-D shapes

UNIT 5: Symmetry

UNIT 6: Constructions

UNIT 7: Transformations

UNIT 8: Positions and movement

UNIT 9: Properties of 3-D objects

UNIT 10: Viewing of objects

UNIT 11: Perimeter, Surface Area and Volume

TERM 4

UNIT 1: Whole numbers: Counting, ordering, comparing, representing and place value

UNIT 2: Whole numbers: Addition and subtraction

UNIT 3: Temperature

UNIT 4: Capacity/Volume

UNIT 5: Mass

UNIT 6: Data Handling

TERM 1

FINAL DRAFT COPY

UNIT 1

WHOLE NUMBERS: COUNTING, ORDERING, COMPARING, REPRESENTING AND PLACE VALUE

1.1 Count, recognise and represent numbers

Whole numbers are made up of parts that are called **place value parts**. For example, the number **69 237 155** is made up of the following parts and is said to be written in expanded notation.

1. Write the number symbols in expanded notation.
 - (a) Twenty-two million one hundred and thirty-seven thousand two hundred and ninety-one.
 - (b) Twelve million seven hundred and one thousand two hundred and forty-five.
 - (c) Forty-three million six hundred and twenty thousand five hundred and twenty-four.
 - (d) Thirty-one million thirty-one thousand and thirty-one.
 - (e) Seventy-nine million five hundred and forty-nine thousand four hundred and seventy-seven.
2. The digit in the hundreds place in 12 837 465 is 4.
 - (a) Which digit is in the millions place?
 - (b) Which digit is in the ten millions place?
 - (c) Which digit is in the thousands place?
3. Arrange the following numbers in **ascending order**.
 - (a) 76 896 576; 67 957 398; 73 374 376; 98 303 313
 - (b) 57 695 836; 57 965 893; 57 596 963; 57 695 683

4. Arrange the following numbers in **descending order**.

(a) 45 873 492; 45 783 492; 54 783 492; 54 873 492

(b) 97 592 746; 79 592 746; 97 952 746; 79 529 746

1.2 Rounding off to the nearest 1 000, 10 000 and 100 000

When rounding to the nearest 1 000, we look at the hundreds. Is the hundreds value less than, equal to or greater than 500? If less than 500, round down (the thousands value stays the same), if equal to 500 or greater than 500 round up.

When rounding to the nearest 10 000, we look at the thousands. Is the thousands value less than, equal to or greater than 5 000? If less than 5 000, round down (the ten thousands value stays the same), if equal to 5 000 or greater than 5 000 round up.

When rounding to the nearest 100 000, we look at the ten thousands. Is the ten thousands value less than, equal to or greater than 50 000? If less than 50 000, round down (the hundred thousand value stays the same), if equal to 50 000 or greater than 50 000 round up.

Example 1

3 254 rounded off to the nearest multiple of 1 000 will be 3 000 because 3 254 is between 3 000 and 4 000 and is closer to 3 000 than 4 000.

Example 2

87 943 rounded off to the nearest multiple of 10 000 will be 90 000 because the thousands digit is 7, therefore 87 943 is between 80 000 and 90 000 and is closer to 90 000 than 80 000.

If the thousands digit is 5; 6; 7; 8 or 9; we round off to the next multiple of ten thousand.

Example 3

456 943 rounded off to the nearest multiple of 100 000 will be 500 000 because the ten thousands digit is 5, therefore 456 943 is between 400 000 and 500 000 and is closer to 500 000 than 400 000.

If the ten thousands digit is 5; 6; 7; 8 or 9; we round off to the next multiple of hundred thousand.

1. Round off the following to the nearest multiple of 1 000 and 10 000.

No.	Original number	Nearest 1 000	Nearest 10 000
(a)	34 765		
(b)	46 872		
(c)	85 346		
(d)	62 837		
(e)	54 999		

2. Round off the following to the nearest multiple of 100 000.

- (a) 789 342
- (b) 432 687
- (c) 1 275 427
- (d) 3 649 878
- (e) 75 892

UNIT 2

WHOLE NUMBERS: ADDITION AND SUBTRACTION

2.1 Use a range of techniques to perform written calculations with whole numbers

Adding and subtracting using a calculator

Example

Calculate the following using a calculator

$$4\,786 + 9\,536$$

$$7\,869 - 5\,425$$

Calculator keystroke sequence

4	7	8	6		9	5	3	6	
7	8	6	9		5	4	2	5	

Adding using expanded column method

Example

$$57\,234\,494 + 14\,173\,245 =$$

57 234 494	
+ 14 173 245	
9	(4 + 5)
130	(90 + 40)
600	(400 + 200)
7 000	(4 000 + 3 000)
100 000	(30 000 + 70 000)
300 000	(200 000 + 100 000)
11 000 000	(7 000 000 + 4 000 000)
+ 60 000 000	(50 000 000 + 10 000 000)
= 71 407 739	

Subtracting using expanded column method

Example

$$57\,274\,495 - 14\,133\,244 =$$

57 274 495	
<u>14 133 244</u>	
1	(5 - 4)
50	(90 - 40)
200	(400 - 200)
1 000	(4 000 - 3 000)
40 000	(70 000 - 30 000)
100 000	(200 000 - 100 000)
3 000 000	(7 000 000 - 4 000 000)
+ <u>40 000 000</u>	(50 000 000 - 10 000 000)
= <u>43 141 251</u>	

Subtracting using expanded column method

Example

$$87\,274\,495 - 64\,136\,246 =$$

87 274 495	
<u>64 136 246</u>	
9	(5 10 6)
40	(80 40)
200	(400 200)
8 000	(4 000 10 000 6 000)
30 000	(60 000 30 000)
100 000	(200 000 100 000)
3 000 000	(7 000 000 4 000 000)
+ <u>20 000 000</u>	(80 000 000 60 000 000)
= <u>23 138 249</u>	

1. Calculate each of the following using the column method and check your answers using a calculator.

- (a) $15\,987\,364 + 49\,790\,683$
- (b) $76\,263\,785 + 57\,953\,064$
- (c) $80\,487\,952 - 79\,956\,854$
- (d) $97\,654\,231 - 7\,493\,392$
- (e) $75\,643\,342 + 923\,789$

Addition and Subtraction in columns

Examples

Addition

$$\begin{array}{r} 81\,768\,421 + 76\,593\,094 = \\ 81\,768\,421 \\ + \underline{76\,593\,094} \\ \hline 158\,361\,515 \end{array}$$

Subtraction

$$\begin{array}{r} 77\,473\,546 - 34\,181\,362 \\ 77\,473\,546 \\ - \underline{34\,181\,362} \\ \hline 43\,292\,184 \end{array}$$

2. Calculate the following using the column method.

- (a) $54\,798\,456 - 17\,573\,245$
- (b) $26\,839\,632 - 11\,376\,489$
- (c) $83\,482\,563 - 49\,356\,278$
- (d) $13\,763\,264 + 78\,639\,652$
- (e) $91\,695\,481 + 21\,397\,447$

2.2 Problem solving

1. Calculate

- (a) A local municipality has already spent R12 102 436 of its housing budget of R85 514 559. How much money is still available?

- (b) 253 492 of the 292 388 voters in a district are male. How many of the voters are female?
- (c) 253 476 new houses were built by the government in new settlements during a certain year. At the end of the year, there were 913 658 houses in the new settlements. How many houses were there at the beginning of that year?
- (d) During a previous election there were 863 458 registered voters in a certain city. During the next election there were 808 389 voters in the city. Did the number of voters increase or decrease? By how many?

UNIT 3

WHOLE NUMBERS: MULTIPLICATION

3.1 Revise multiples and factors

A **factor** is a number that divides into another number without leaving the remainder.

Example 1

Factors of 100 are:

1, 2, 4, 5, 10, 20, 25, 50, 100

The factor pairs of 100 are:				
1.	1 and 100	Since	1	100 100
2.	2 and 50		2	50 100
3.	4 and 25		4	25 100
4.	5 and 20		5	20 100
5.	10 and 10		10	10 100

1. Write the factors of the following numbers:

- (a) 200
- (b) 150
- (c) 376
- (d) 169
- (e) 125

A **multiple** is a number that can be divided by another number without a remainder.

Multiples of 50 are 50; 100; 150; 200; 250; ...

2. Write the first five multiples of the following numbers:

- (a) 120
- (b) 45
- (c) 100
- (d) 250
- (e) 400

3.2 Use a range of techniques to perform written calculations with whole numbers

Multiplication is when you take a number and add it to itself a number of times. It can be done in different ways, for example by breaking down numbers, using column method and using a calculator.

Multiplication by breaking down numbers

Example

4231 121
[(4000 100) (4000 20) (4000 1)] [(200 100) (200 20) (200 1)] [(30 100) (30 20) (30 1)] [(1 100) (1 20) (1 1)]
400 000 80 000 4 000 20 000 4000 200 3 000 600 30
100 20 1
400 000 (80 000 20 000) (4 000 4 000 3 000) (200 600
100) (30 20) 1
500 000 11 000 900 50 1
511 951

1. Multiply the following using breaking down method and check your answers using a calculator.
 - (a) 1 374 213
 - (b) 1 724 142
 - (c) 2 512 327
 - (d) 3 403 154
 - (e) 4 856 309

UNIT 4

WHOLE NUMBERS: DIVISION

4.1 Use a range of techniques to perform written calculations with whole numbers

Multiples and factors

Multiples of a number are the numbers obtained if the number is multiplied by natural numbers.

Factors of a number are numbers that divide exactly into a number and leave no remainder.

The number 42 can be obtained by calculating 7×6 .

We can say:

Á 42 is the **product** of 6 and 7

Á 42 is a **multiple** of 6

Á 42 is also a multiple of 7

Á 7 is a **factor** of 42

Á 6 is also a factor of 42

We can also **express** (write) 42 as the product of two whole numbers, in other ways: $2 \times 21 = 42$; $3 \times 14 = 42$ and $1 \times 42 = 42$.

Note:

Multiples are bigger or equal to the number e.g. Multiples of 121: **121**; 242; 363; 484; 605; 726 etc

Factors are smaller or equal to the number e.g. Factors of 124: 1; 2; 31; 62 and **124**.

1. Write the first 5 multiples of the following numbers.

(a) 34

(b) 50

(c) 1 227

(d) 2 319

(e) 1 114

2. Write down the factors of:

- (a) 24
- (b) 36
- (c) 440
- (d) 546
- (e) 729

3. Write down the multiples of 5 between 61 and 78

4. Write the factors of 64 between 3 and 17

Division using a clue board method

When working with division, learners remember easily with multiplication facts for multiples of 10 and thereafter doubling and halving. Creating a clue board first will help as a reference to do calculations on division.

Example

1 260 28

While they do not know the 28 times table, they do know 28 10 and how to use this to get multiples of 28 10.

Learners find 28 5 by halving 28 10

Learners use doubling to find 28 2; 28 4;

Learners fill in other multiples as they need to use them.

Learners multiply and then subtract to calculate by approximation.

Clue board

10	28 = 280
20	28 = 560
30	28 = 840
40	28 = 1 120
5	28 = 140
4	28 = 112
6	28 = 168
2	28 = 56

Multiply to get an approximate answer	Subtract to find the difference
40 28 1 120	1260 – 1120 140
5 28 140	140 – 140 0

1 260 28 **40** **5** **45**

Learners should check their calculations by multiplying:

28 45 (28 40) (28 5)

$$\begin{array}{r}
 1\ 120\ 140 \\
 = 1\ 260
 \end{array}$$

5. Calculate by using a clue board

- (a) 1 176 42
- (b) 3 060 36
- (c) 3 072 32
- (d) 2 444 188
- (e) 4 205 145
- (f) 6 318 234

Long division method

Long division is the mathematical method for dividing large numbers into smaller groups or parts. It helps to break down a problem into simple and easy steps.

There are terms that are associated with division:

- Á **Divisor** is a number that divides another number (dividend)
- Á **Dividend** is a number to be divided by another number (divisor)
- Á **Quotient** is the answer you get when you are dividing
- Á **Remainder** is the number that is left after dividing

Examples

Á 20 3 6 remainder 2

Á 2 535 15 = 169

The notation that is normally used for long division is:

When using long division method it is important to know multiples of the divisor and you can write them as your clue board as shown in the examples.

Example1

Use long division and a clue board to calculate $2\,535 \div 15$

Steps to follow:

$$\begin{array}{r}
 15 \overline{) 2\,535} \\
 \underline{15\,00} \\
 1035 \\
 \underline{900} \\
 135 \\
 \underline{135} \\
 0
 \end{array}$$

$\text{R}2\,535 \div 15 = 169$

15	1	15
15	2	30
15	3	45
15	4	60
15	5	75
15	6	90
15	7	105
15	8	120
15	9	135
15	10	150

Example 2

Jerry wants to buy a TV game that costs R3 750. He washes cars in the neighbourhood and earns R56 for every car he washes. How many cars must he wash to earn enough money so that he can buy the TV game?

$$\begin{array}{r}
 56 \overline{) 3\,750} \\
 \underline{3360} \\
 390 \\
 \underline{336} \\
 54 \text{ remainder}
 \end{array}$$

56	1	56
56	2	112
56	3	168
56	4	224
56	5	280
56	6	336
56	7	392
56	8	448

$\text{R}3\,750 \div 56 = 66 \text{ remainder } 54$

∴ Jerry will have to wash 67 cars in order to have enough money to buy the TV game.

Note: It is easy to divide with the calculator. For example, to calculate $6\,804 \div 324$, the keystroke sequence $6\,804 \div 324 =$ gives 21.

6. Calculate using a method of your choice. Check your answers using a calculator.

(a) $6\,804 - 324$

(b) $6\,318 - 234$

(c) $32\,136 - 78$

(d) $5\,408 - 13$

(e) $7\,353 - 9$

(f) $9\,963 - 123$

7. A businessman donates 9 396 boxes of fruits and vegetables to old age homes around the village. The boxes of fruits and vegetables are divided equally between 54 old age homes. How many boxes of fruits and vegetables does each old age home get?

8. The school's drama club is putting on a play. Each club has 78 tickets. Members have to sell 4 212 tickets altogether. How many members does the drama club have?

9. A school has a budget of R4 600 to award learners on prize giving day. Each learner has to be awarded R44 prize. How many learners will be awarded?

4.2 Perform multiple operations on whole numbers with or without brackets

Multiple operations require a guide that indicates the order of using the operations. To solve multiple operations:

Á consider simplifying the brackets first

Á then deal with multiplication and division in their order of appearance in the problem. [Work from left to right]

Á addition and subtraction are dealt with last. [Work from left to right]

Examples

$$\begin{array}{r} 24 - (3 \times 2 + 6) = 24 - 12 \\ 12 \end{array}$$

$$\begin{array}{r} 150 - (25 \times 4) + 5 = 150 - 100 + 5 \\ 50 + 5 \\ 55 \end{array}$$

1. Solve the following problems.

(a) $320 + (60 \times 2 \times 3)$

(b) $43 \times 3 - 30 \times 3$

(c) $450 - (100 + 20 \times 2) \times 3$

(d) $(4 \times 280 + 220) \div 2 \times (730 - 230)$

(e) $896 \div 724 + 36 \div 6 \div 6$

UNIT 5

RATIO AND RATE

Both **rate** and **ratio** are comparisons of two numbers. The main difference is that a **ratio** is a comparison of two numbers with the same unit, whereas, a **rate** is a comparison of two numbers with different units.

Ratio and rate is used for solving many everyday problems that involve comparing different numbers.

A ratio compares the size, or magnitude, of two numbers of the same kind.

4:5
4 boys to 5 girls

A ratio that compares quantities of **different types** (of measurement units) that are related to each other is called a rate.

R25 per kg

1. Ratio

A ratio is a relationship between quantities of the same kind e.g. boys to girls as they are both human beings.

Ratio can be expressed as a fraction.

Examples

Write a ratio of apples to bananas as a fraction.

Á Add the two parts to make it a whole i.e. 7 + 8 = 15

Á Write each part as part of a whole
i.e. $\frac{7}{15}$ and $\frac{8}{15}$

When converting ratios to fractions they should be written in a simplified form and remain equivalent. To do this we need to ask what number can divide equally into the numerator and denominator of a fraction.

When converting fractions to percentages, we need to make use of equivalence to make the denominator to be 100.

There is 1 boy and 3 girls in the room. You could write the ratio as: 1:3

$\frac{1}{4}$ are boys

0,25 are boys

25% are boys

$\frac{3}{4}$ are girls

0,75 are girls

75% are girls

Example

In a certain primary school there are 8 male teachers and 12 female teachers.

Á What is the ratio of male teachers to female teachers?

8 males : 12 females (to simplify both sides by the common factor 4)

2 males : 3 females (always write ratio in simplified form)

Á Write the ratio as a fraction and a percentage.

Fraction: Males $\frac{2}{5}$

Females $\frac{3}{5}$

Percentage:

Males $\frac{2}{5} = \frac{2 \times 20}{5 \times 20} = \frac{40}{100} = 40\%$

Females $\frac{3}{5} = \frac{3 \times 20}{5 \times 20} = \frac{60}{100} = 60\%$

1. Write the following ratios as fractions.

(a) 3 : 4

(b) 5 : 7

(c) 6 : 8

(d) 3 : 9

(e) 1 : 2

(f) 7 : 9

2. Write the following as percentages:

(a) 4 : 6

(b) 2 : 8

(c) 5 : 5

(d) 12 : 13

(e) 20 : 30

3. There were 6 cyclists with red mountain bikes and 4 with green mountain bikes at the race.
- (a) What was the ratio of red to green mountain bikes?
- (b) Write your answer as a common fraction and a percentage.

2. Rate

Rate is the comparison of quantities of different kinds. The **unit rate** describes how many units of the type of quantity correspond to one of the second type of quantity.

Examples

In a ranch, 100 litres of milk are consumed in 20 days. How many litres are consumed per day?

100 litres of milk in 20 days = 5 litres per day (**divide both by 20**)

- Find the unit rate of the following:
 - 48 orders in 6 days _____ orders per day.
 - 27 muffins in 3 boxes _____ muffins per box.
 - 24 slices from 4 bread _____ slices per bread.
 - $$\frac{\text{١٠ يې ٲٲٲ}}{\text{٣ ٲٲٲ ٲٲٲ ٲٲٲ ٲٲٲ}} = \text{_____}$$
 - $$\frac{\text{٥٠ ٲٲٲ ٲٲٲ ٲٲٲ}}{\text{٥ ٲٲٲ ٲٲٲ ٲٲٲ ٲٲٲ}} = \text{_____}$$
 - $$\frac{\text{١١ ٲٲٲ}}{\text{٥ ٲٲٲ ٲٲٲ ٲٲٲ}} = \text{_____}$$
- Thando drove a total of 1 200 km and used 120 litres of petrol. What is this rate in kilometres per litre?
- Jane scored 8 goals in 4 netball matches. At this rate, about how many goals did she score in each game?
- Climbing a mountain, Noel ascended 160 metres every hour. At this rate, how many metres will he ascend in 4 hours?
- Autumn started and over a period of 4 hours, 120 leaves fell from a tree. At this rate, how many leaves fell in one hour?

6. R240 will be divided between David and Sally in the ratio 3 : 5. This means Sally gets R5 for every R3 David gets. How much will David and Sally each get in total?

UNIT 6

COMMON FRACTIONS

Nozuko bought a watermelon and will share it with her 3 sisters. They cut the watermelon into 4 equal parts. So each person got a quarter ($\frac{1}{4}$) of the whole.

Each person got a fraction of a whole.

1 whole	Half ($\frac{1}{2}$)	Quarter ($\frac{1}{4}$)
		

A fraction has two parts. The top part called the **numerator**. It shows how many equal parts of the whole or collection are taken or used. The **denominator**, written below the line, shows the total number of equal parts a whole has been divided into or the total number of equal parts which are there in a collection.

6.1 Compare and order common fractions

Example 1

Which is more, $\frac{3}{5}$ of a loaf of bread or $\frac{1}{2}$ of a loaf of bread?

You can make neat rough drawings to answer a question such as this.

From the above drawings $\frac{3}{5}$ is more.

Drawings like these are called fraction strips. A fraction strip showing eighths is called an eighths strip. A fraction strip that shows fifths is called a fifths strip.

Example 2

Compare the two fractions. Which is bigger or are they the same?

$$\frac{5}{10} \text{ and } \frac{1}{2}$$

$$\frac{5}{10} = \frac{2}{2} = \frac{6}{6} \quad \text{and} \quad \frac{1}{2} = \frac{5}{10} = \frac{1}{2}$$

$\frac{1}{2}$ is bigger

1. Which weighs more, or is the mass the same? You may find the diagrams useful.

(a) $\frac{3}{4}$ kg copper or $\frac{3}{8}$ kg copper

(b) $\frac{1}{4}$ kg copper or $\frac{1}{8}$ kg copper

(c) $\frac{3}{8}$ kg copper or $\frac{5}{10}$ kg copper

(d) $\frac{5}{8}$ kg copper or $\frac{1}{2}$ kg copper

(e) $\frac{5}{10}$ kg copper or $\frac{1}{2}$ kg copper

(f) $\frac{5}{8}$ kg copper or $\frac{5}{10}$ kg copper

(g) $\frac{5}{10}$ kg copper or $\frac{5}{8}$ kg copper

2. Arrange the following 11 numbers from smallest to largest:

$$\frac{5}{10}, \frac{3}{4}, \frac{5}{8}, \frac{1}{2}, \frac{3}{8}, \frac{5}{10}, \frac{1}{4}, \frac{3}{10}, \frac{5}{16}, \frac{1}{8}, \frac{3}{16}$$

3. Arrange the following 11 numbers from largest to smallest:

$$\frac{5}{10}, \frac{3}{4}, \frac{5}{8}, \frac{1}{2}, \frac{3}{8}, \frac{5}{10}, \frac{1}{4}, \frac{3}{10}, \frac{5}{16}, \frac{1}{8}, \frac{3}{16}$$

4. Replace $\frac{1}{2}$ by either $\frac{1}{4}$ or $\frac{3}{4}$

- (a) $\frac{2}{5} \div \frac{2}{5}$ $\frac{2}{5} \times \frac{5}{2}$
- (b) $\frac{4}{5} \div \frac{3}{5}$ $\frac{4}{5} \times \frac{5}{3}$
- (c) $\frac{5}{5} \div \frac{3}{5}$ $\frac{5}{5} \times \frac{5}{3}$
- (d) $\frac{3}{5} \div \frac{3}{5}$ $\frac{3}{5} \times \frac{5}{3}$

6.2 Adding and subtracting fractions

It is easy to add and subtract fractions that are expressed with the same denominator.

Example 1

Á Use a rough sketch to add $\frac{4}{9}$ to $\frac{2}{9}$ and then calculate.

Therefore: $\frac{4}{9} + \frac{2}{9} = 4 \text{ ninths} + 2 \text{ ninths} = 6 \text{ ninths}.$

Example 2

Therefore $\frac{11}{12} - \frac{6}{12} = 11 \text{ twelfths} - 6 \text{ twelfths} = 5 \text{ twelfths} = \frac{5}{12}.$

1. Calculate the following.

- (a) $\frac{1}{5} + \frac{3}{5}$
- (b) $\frac{1}{5} - \frac{3}{5}$

$$(c) \frac{0}{5} \frac{2}{5} + \frac{1}{5} \frac{1}{5}$$

Example 3

1. The length of the green strip is $\frac{0}{5} \frac{2}{5}$.
2. The length of the coral strip is $\frac{0}{5} \frac{0}{5} + \frac{3}{5} \frac{3}{5}$.

Example 4

Sometimes when you add common fractions, the result is more than a whole. The answer becomes a whole number and a common fraction and we call that a **mixed number**. An example is given below.

$$\frac{4}{5} + \frac{0}{5} + \frac{0}{5} = 1 \frac{4}{5}$$

2. Calculate the following

$$(a) \frac{2}{3} + \frac{1}{3}$$

$$(b) \frac{0}{5} \frac{0}{5} + \frac{4}{5} \frac{4}{5}$$

$$(c) 1 \frac{4}{5} + \frac{0}{5} \frac{0}{5}$$

$$(d) 1 \frac{1}{2} + \frac{1}{2}$$

$$(e) 2 \frac{1}{3} + 1 \frac{1}{3}$$

6.3 Fractions of a whole or collection

Express the following in diagrammatic form in order to assist with calculations.

Example 1

Anita ate $\frac{1}{6}$ of 3 cakes. How much cake did she really eat?

Á Use diagrams to represent the 3 fractions.

$$\frac{1}{6} \quad \frac{1}{6} \quad \frac{1}{6} \quad \frac{1 \ 1 \ 1 \ 1}{6} \quad \frac{4}{6} \quad 1\frac{2}{6}$$

Anita ate one whole and one eighth of the cakes.

Example 2

How much is $\frac{2}{5}$ of 250?

$$\frac{2}{5} \quad 250 \quad \frac{2 \ 5 \ 5 \ 5}{5} \quad 10$$

- Calculate:
 - Half of 20.
 - A quarter of 84.
 - A fifth of fifteen.
- 93 learners are divided equally into three classes. Each class has its own classroom.
 - What fraction of all the learners are in each of the classrooms?
 - How many learners are there in each class?
- Ndumiso is painting the garden wall red. The wall consists of $\frac{5}{7}$ panels (divisions) of the same size.
 - On the first day, Ndumiso painted 14 of the wall. How many panels did he paint?
 - On the second day, he painted $\frac{2}{7}$ of the wall. What fraction of the wall was painted on the second day?

(c) What fraction of the whole wall had been painted at the end of day 2?

6.4 Equivalent fractions

Study the following diagrams that represent fractions. What do you notice?

The three circles are equal in size but they are separated into different sectors. The shaded areas of the circles are the same. The three fractions have different numerators and denominators but they have the same value. They represent the same proportion of the whole. We say they are **equivalent fractions** e.g.

$\frac{1}{2}$, $\frac{2}{4}$, $\frac{4}{8}$. That is also true for the unshaded areas. They are also equivalent i.e. $\frac{1}{2}$, $\frac{2}{4}$, $\frac{4}{8}$.

Using equivalence

To add fractions with different denominators, we have to use equivalent fractions. For example, $\frac{2}{5} + \frac{1}{3}$: 4 ninths + 1 third is difficult to do. Therefore, to calculate $\frac{2}{5} + \frac{1}{3}$ we have to express $\frac{1}{3}$ as a ninth.

$$\frac{2}{5} + \frac{1}{3}$$

$$\frac{2}{5} + \frac{1 \times 3}{3 \times 3}$$

$$\frac{2}{5} + \frac{3}{9}$$

$$\frac{2}{5} + \frac{3}{9}$$

$\left[\frac{1}{3} \text{ is equivalent to } \frac{3}{9}\right]$

1. Use the fraction wall and the example provided to complete the following activity.

Example: $\frac{2}{4} = \frac{2}{4}$ $\frac{2}{4} = \frac{1}{2}$

(a) $\frac{2}{4} = \frac{2}{4}$ $\frac{2}{4} = \frac{1}{2}$

(b) $\frac{2}{4} = \frac{2}{4}$ $\frac{2}{4} = \frac{1}{2}$

(c) $\frac{2}{4} = \frac{2}{4}$ $\frac{2}{4} = \frac{1}{2}$

(d) $\frac{2}{4} = \frac{2}{4}$ $\frac{2}{4} = \frac{1}{2}$

2. Complete the following using the diagrams provided.

(a) $\frac{1}{2} = \frac{2}{4}$ $\frac{1}{2} = \frac{1}{2}$

(b) $\frac{1}{2} = \frac{2}{4}$ $\frac{1}{2} = \frac{1}{2}$

(c) $\frac{1}{2} = \frac{2}{4}$ $\frac{1}{2} = \frac{1}{2}$

6.5 Percentages

Working with hundredths.

The word **percent means hundredth**. If a person got 50 percent in a test, it means that person got 50 out of 100 or $\frac{50}{100}$. The **symbol for percent is %**.

53 % means 53 out of 100 or $\frac{53}{100}$. This is the same as $\frac{5}{10} + \frac{3}{100}$ or 0,53

Instead of saying 53 hundredths we can say 53%.

This shows that we can express 53 hundredths using different symbols or notations such as 0,53 and 53% and $\frac{53}{100}$, where

Á 0,53 is a **decimal fraction** notation

Á 53% is a **percentage** notation

Á $\frac{53}{100}$ is a **common fraction** notation

1. Write each fraction as a percentage.

(a) $\frac{4}{5}$

(b) $\frac{3}{5}$

(c) Zandiswa got 21 out of 50 for her Mathematics test. What percentage did she get?

2. Express each of the following shaded regions in three ways:

- in the decimal notation,
- in the percentage notation, and
- if possible, in the common fraction notation, using hundredths

Diagrammatic form	Common fraction (hundredth)	Decimal fraction	Percentage
			

Percentages of whole numbers

Calculating a percentage of a whole number is the same as calculating a fraction of a whole number. Therefore, a percentage is a fraction written in a different notation. So, to determine 5% of 65 is the same as determining $\frac{5}{100}$ of 65. We simply divide by 100, which is a skill we have been practicing and can do mentally. We can also do them using our calculators.

3. Use your calculator to do the following:

(a) 10% of 85

$$\frac{10}{100} \times 85$$

$$8,5$$

(b) 20% of 400

(c) 15% of 450

(d) 25% of 444

(e) 3% of R600

(f) 14% of R1 500

4. A clothing shop has a 25% off sale. This means that the clothes on sale will sell for 25% less than the normal price. Calculate what the sale price will be if the original price is:

- (a) R100
- (b) R400
- (c) R600
- (d) R1 200

5. Last year, there were 20 girls in a class. This year, there are 10% more girls. How many girls are in the class this year?
6. The population of the town was 18 000, it then increased over the years by 25%. What is the population of the town now?
7. Over the years, the population of a town has increased by 25%. The population of the town was 18 000. What is the population of the town now?

UNIT 7

DECIMAL FRACTIONS

7.1 Representation of decimals on a place value column

To convert common fractions to decimal fractions we use a place value column which will be demonstrating the position of the digits from the fractions with denominators of 10 or 100.

Start by rewriting and converting tenths and hundredths in common fraction form to decimal fractions. Where denominators of other fractions are factors of 10 e.g. 2, 5 or factors of 100 e.g. 2, 4, 25, 20, 50 learners

Note:

Á 0,1 is another way to write $\frac{1}{10}$

Á 0,01 is another way to write $\frac{1}{100}$

Á 0,1 and $\frac{1}{10}$ are different notations for the same number. $\frac{1}{10}$ is called the (common) fraction notation and 0,1 is called the decimal notation

Example

Represent the following as decimal fractions:

(a) $\frac{2}{10} = 0,2$

(b) $\frac{4}{10} = 0,4$

(c) $\frac{25}{100} = 0,25$

(d) $\frac{75}{100} = 0,75$

decimal comma					$\frac{1}{10}$	$\frac{1}{100}$
H	T	O	t	h		
		0	2			
		0	4			
		0	2	5		
		0	7	5		

1. Answer the following.

- What part of the rectangle below is coloured yellow?
- What part of the rectangle is red?
- What part is blue?
- What part is green?

(e) What part is not coloured?

2. Write the following in decimal notation

(a) $\frac{2}{100}$

(b) $\frac{1}{100}$

(c) $\frac{2}{100}$

(d) $\frac{2}{1000}$

(e) $\frac{10}{1000}$

(f) $\frac{6}{1000}$

(g) $\frac{4}{1000}$

7.2 Count, order and compare decimal fractions

Place value of digits

2,935 can be expressed in expanded notation as $2 + 0,9 + 0,03 + 0,005$. These parts are named as follows:

Á the 2 represents the **ones**

Á the 9 represents the **tenths**

Á the 3 represents the **hundredths**

Á the 5 represents the **thousandths**

The **value** of the 9 is nine tenths but the **place value** of the 9 is **tenths**, because any digit in that **place** will represent the number of **tenths**.

For example

In 4,857 – the **value** of the five is 0,05 and its **place value** is **hundredths**, because the **value of the place** where it stands is **hundredths**.

We can also write 2,935 in words as:

2 ones 9 tenths 3 hundredths thousandths

1. Write each of the following as one number:

(a) $2 + 0,5 + 0,07$

(b) $2 + 0,5 + 0,007$

(c) 5 0,4 0,03

(d) 5 0,04 0,003 0,1

2. Write the **value** and the **place value** of each of the underlined digits.

(a) 2,34

(b) 4,67

(c) 1,95

(d) 34,856

(e) 564,34

(f) 0,987

3. Write the following in words:

(a) 2,54

(b) 5,37

(c) 3,589

(d) 7,036

Compare and order decimal fractions

Decimal fractions can be written from smallest to largest or largest to smallest.

Note that tenths are bigger than the hundredths and thousandths are smaller than the tenths e.g. 0,3 is bigger than 0,07

Arrange 0,545 ; 0,654 ; 0,454 ; 0,554 in descending order.

Hint: Look at the ones first then tenths, then hundredths, then thousandths

Á Ones are the same

Á On tenths **6** in 0,654 is bigger than 5 and 4 therefore 0,654 will be the bigger one followed by 0,554 since 4 in tenths (0,454) is smaller than 5 in 0,554; followed by 0,545 and the last one will be 0,454.

[0,654; 0,554; 0,545; 0,454]

0,654 > 0,554

0,454 < 0,545

1. Fill in > , < or

- (a) 0,4 _____ 0,04
 (b) 0,05 _____ 0,005
 (c) 0,1 _____ 0,10
 (d) 0,62 _____ 0,26
 (e) 0,58 _____ 0,85
 (f) 0,37 _____ 0,73

2. Write the following in ascending order:

- (a) 0,8 ; 0,05 ; 0,5 ; 0,15 ; 0,465
 (b) 0,55 ; 0,75 ; 0,4 ; 0,62

3. Write the following in descending order:

- (a) 0,753 ; 0,8 ; 0,82
 (b) 0,67 ; 0,007 ; 0,06

7.3 Rounding off decimal fractions

Just as whole numbers can be rounded off to the nearest multiple of 10, 100 or 1 000, decimal fractions can be rounded off to the nearest whole number or to one, two, three digits after the comma.

A decimal fraction is rounded off to the number whose value is closest to it. Therefore 12,24 rounded off to one decimal place is 12,2 and 11,37 rounded off to one decimal place is 11,4. A decimal ending in a 5 is an equal distance from the two numbers to which it can be rounded off. Such decimals are rounded off to the biggest number, so 10,45 rounded off to one decimal place becomes 10,5.

Round off to the nearest unit

Round off to the nearest tenth

1. Round each of the following numbers off to the nearest whole number:

- (a) 7,6
- (b) 18,3
- (c) 204,5
- (d) 1,89
- (e) 34,7

2. Round each of the following numbers off to one decimal place:

- (a) 7,68
- (b) 18,93
- (c) 21,47
- (d) 0,643
- (e) 0,938

3. Round each of the following numbers off to two decimal places:

- (a) 3,432
- (b) 54,117
- (c) 4,809
- (d) 3,762
- (e) 4,258

7.4 Calculations with decimal fractions:

Addition and subtraction of decimal fractions

When you add or subtract decimal fractions, you can change them to common fractions to make the calculation easier.

Example

$$\begin{aligned} \text{Á } 0,4 + 0,5 &= \frac{4}{10} + \frac{5}{10} = \frac{9}{10} = 0,9 \\ \text{Á } 0,6 - 0,2 &= \frac{6}{10} - \frac{2}{10} = \frac{4}{10} = 0,4 \\ \text{Á } 0,12 + 0,23 &= \frac{12}{100} + \frac{23}{100} = \frac{35}{100} = 0,35 \end{aligned}$$

NOTE: Place value is important when adding or subtracting decimal fractions. fractions. Make sure the commas are under each other.

Example

Á Add length and width from the following diagram.

Method 1: Expanded notation	Method 2: Column method
$4,7 + 3,5 = (4 + 3) + (0,7 + 0,5)$ $ 7 + 1,2$ $ 8,2$	$\begin{array}{r} 4,7 \\ + 3,5 \\ \hline 8,2 \end{array}$ <i>(comma under each other)</i>

Á Calculate $2,37 + 4,53 - 3,88$

Column method	Expanded notation
$\begin{array}{r} 2,37 \\ + 4,53 \\ \hline 6,90 \\ - 3,88 \\ \hline 3,02 \end{array}$	$\begin{aligned} &2,37 + 4,53 - 3,88 \\ &= (2 + 4 - 3) + (0,3 + 0,5 - 0,8) + (0,07 + 0,03 - 0,08) \\ &= 3 + 0 + 0,02 \\ &= 3,02 \end{aligned}$

1. Calculate the following by using any method:

- (a) $3,45 + 4,67$
- (b) $2,15 + 3,24$
- (c) $4,46 - 2,23$
- (d) $5,85 - 3,36$
- (e) $3,24 + 3,35 - 5,36$
- (f) $4,76 + 6,11 - 3,52$
- (g) $6,89 + 9,10 - 5,19$

2. The owner of an internet café looks at her bank statement at the end of the day. She finds the following amounts paid into her account: R281,45;

R39,81; R104,54 and R9,80. How much money was paid into her account on that day?

Multiply by 10 and 100

When multiplying a decimal number by **10**, we shift the digits **1 place** to the left.

e.g. $2,54 \times 10 = 25,4$

When multiplying a decimal number by **100**, we shift the digits **2 places** to the left. e.g. $3,456 \times 100 = 345,6$

Example

The length of a ribbon is 3,45 m. What is the length of 100 ribbons?

Total length = $3,45 \times 100 = 345$ m.

3. Calculate:

- (a) $0,5 \times 10$
- (b) $0,3 \times 100$
- (c) $0,42 \times 10$
- (d) $0,675 \times 100$
- (e) $1,123 \times 10$

4. Lebo buys a packet of minced meat. It weighs 0,215 kg. How much will 10 packets weigh?

5. A dressmaker needs to sew a wedding dress for a customer. To make this dress she will need 100m of the fabric and the fabric costs R23,45 per meter. How much did she pay for the fabric?

6. What is the total mass of the sugar shown in the following diagram?

7.5 Recognize equivalence between common fraction, decimal fraction and percentage forms of the same number

1. Express each of the following in three ways:

- in the decimal notation,
- in the percentage notation,
- in the common fraction notation, using hundredths.

(a) 20 hundredths

(b) 25 hundredths

(c) 75 hundredths

2. There are 120 Year 3 students.

(a) 50% of the students are males. How many males are in class?

(b) 25% of students like strawberry ice cream. How many students like strawberry ice cream?

(c) What percentage of students like other flavoured ice creams? How many students like other flavoured ice creams?

TERM 2

FINAL DRAFT COPY

CONTENTS

UNIT 1

WHOLE NUMBERS: COUNTING, ORDERING, COMPARING, REPRESENTING AND PLACE VALUE

1.1 Counting, ordering, comparing numbers

1. Complete the following by **counting** forwards and backwards.

2. Complete the table by filling in the values of A, B and C.

4 324 300	4 326 775	4 329 250	A	B	C	4 339 150
-----------	-----------	-----------	---	---	---	-----------

3. Complete the table by filling in the values of E and F.

E	F	27 250 601	27 197 501	27 144 401
---	---	------------	------------	------------

4. Order the following numbers in ascending order.

- (a) 295 059; 295 095; 295 950; 295 509; 295 905
(b) 2 543 334; 2 544 434; 2 543 343; 2 543 443; 2 544 334
(c) 88 680 008; 88 670 008; 88 660 008; 88 650 008

5. Compare these numbers. Use $<$; $=$ or $>$

- (a) 407 652 $\geq$ 407 625
(b) 1 664 446 $\geq$ 1 664 646
(c) 22 841 787 $\geq$ 23 814 787

Commented [V1]:

1.2 Recognise the place value of digits and represent numbers

1. What is the value of 4 in each of the following numbers?

- (a) 978 **4**35
(b) 3 **4**90 841
(c) **4**7 481 032

2. Complete the table below:

	Number	Expanded Notation	Words
(a)	970 895		
(b)	7 324 006		

1.3 Rounding off to the nearest multiple of 1 000; 10 000; 100 000

1. Complete the following:

	Number	Nearest 1000	Nearest 10 000	Nearest 100 000
(a)	834 792			
(b)	5 208 147			
(c)	62 987 504			

UNIT 2

FINANCE

2.1 Solve problems that involve whole numbers, percentages and decimal fractions in financial contexts.

Profit

A profit is an amount of money you gain when you are paid more for something than its cost.

Loss

A loss is the negative difference between the cost price and the selling price.

For an example, if a product is sold at a price less than its cost price then the seller makes a loss.

Profit	Loss
Mr Kunene bought a television set at R1 000 and sold it at R1 200. Calculate the profit and the percentage profit.	Mrs. Smith bought a hand bag at R 2999 and sold it at R2 499. Calculate the loss and the percentage loss.
(a) Profit selling price $\checkmark$ cost price R1 200 R1 000 R 200	(a) Loss cost price $\checkmark$ selling price R2 999 R2 599 R 400
(b) Percentage Profit $\frac{\text{Profit}}{\text{Cost Price}} \times 100$ $\frac{200}{1000} \times 100$ 20%	(b) Percentage Loss $\frac{\text{Loss}}{\text{Cost Price}} \times 100$ $\frac{400}{2999} \times 100$ 15%

- Copy this table into your book. Fill in whether each situation is a **profit** or **loss**. Calculate the **percentage profit** or **percentage loss**.

No.	Original Price	Selling price	Profit or Loss?	Percentage profit or loss
(a)	R600	R540		
(b)	R410	R360		
(c)	R2 500	R950		
(d)	R24 000	R19 000		

2. Find the profits and losses on these amounts:

- (a) 30% profit R 6 000
- (b) 20 % loss of R36 000
- (c) 40% profit on R 300
- (d) 15% loss on R230

3. Solve the word problems

- (a) Mzimasi bought a bicycle for R1450 and sold it three years later at a loss of 20%. How much did he sell the bicycle for?
- (b) Sam bought eggs from a chicken farm and sold them at the market. He paid R 49,99 for the eggs and sold them at 20 % profit. How much money did Sam make? What was the new selling price?
- (c) A shirt costs R175. I got 25% discount. How much did I pay for it?

Discount

A discount is an amount that is subtracted from the cost or regular price of an item. It is usually calculated in percentages.

Á How to calculate discount in percentages?

Examples

In a video store a DVD that costs R360 is marked down to R229.

(a) What is the discount price?

$$\begin{array}{rcl} \text{Discount} & \text{cost price} - \text{selling price} & \\ & \text{R360} - \text{R229} & \text{R131} \end{array}$$

(b) What is the percentage discount of the DVD?

$$\begin{array}{rcl} \% \text{ discount} & \frac{\text{Discount}}{\text{Cost Price}} \times 100 & \\ & \frac{131}{360} \times 100 & 36,39\% \end{array}$$

The percentage discount is 36,39%.

(c) In a candy store, a R12 jar of candy is labelled 20% discount.

What is the discount price?

$$\begin{array}{rcl} \text{Discount} & \frac{20}{100} \times 12 & \text{R 2,40} \end{array}$$

4. Study the following advertisement.

ITEMS ON SALE:

1. Copy and complete the table. Show your working in your book.

No.	Item	Cost	Discount	Sale price
Example	Watch	R160	$\frac{30}{100} \times R160 = R32$	$R160 - R32 = R128$
(a)	Calculator			
(b)	Bicycle			
(c)	Takkies			
(d)	Television			
(e)	T-shirt			

2. Solve the following word problems.

- (a) The original price of a bowl of tomato soup is R3,50. How much will Nancy pay if she buys it during sale when it is labelled "25% off"?
- (b) In a retail store a R299 dress is marked, "save 10%". Calculate the discount price and the sale price of the dress.
- (c) If you bought your bicycle for R1300 and you are selling it for R 1500. Calculate the percentage profit.

Budget

A budget is a plan that helps you to manage your money effectively. It shows how much money you receive (income) and how you plan to spend it

(expenditure). Creating a budget is the most important step in controlling your money.

The first rule to budgeting is: **spend less than you earn!**

Grade 7 DBE Workbook
11TH Edition. Page 22.

THE CHILD'S PERSONAL BUDGET FOR THE			
BUDGET: BONGY LOOTS		SEPTEMBER 2022	
Income		Expenses	
Pocket money	R100	Tuck shop	R 50
Money from chores	R 50	Charity	R 10
		Gift – friend	R 70
		Savings	R 20
Total	R150	Total	R150

Income and expenses

There are different types of Income or Expenses such as fixed, variable and occasional.

Á **Fixed** means it does not change with time.

Á **Variable** means it changes over time, according to the situation.

Á **Occasional** means it occurs from time to time.

The following table shows some examples of Income and Expenses

INCOME	EXPENSES
Á Grant: Child grant, old-age pension, disability grant	Á Living expenses
Á Pension: Government and private	Á Accounts
Á Old-age grant	Á Telephone
Á Salary: Monthly earnings from an employer	Á Insurance
	Á Personal taxes

Á Wages: Weekly earnings from an employer	Á Loan payments
Á Commission: Money earned from selling	Á Savings
Á Profit: Extra money gained on sales of goods and services	Á Salaries and wages
Á Gift	Á Business running expenses
Á Financial assistance	
Á Rental income for a property	

Note: There are several things you should aim for in your personal budget:

- Á It should be realistic, so that you can stick to it.
- Á It should list all of the items that are needed and should try to anticipate unforeseen expenses.
- Á It should focus on the high priority items (essential items such as food and health care). If too much of the income is spent on non-essential items and not on savings, your budget is going to become problematic in the future.
- Á It should be balanced. If your income is less than your expenses, then you need to revise it until the two sides balance. If your income is more than your expenses, then you should plan to save the extra money.
- Á An ideal budget should include a plan to save money for the future, or to pay off debts to allow for savings in the following months.

Example:

Study the table with income and expenditure of a certain family.

Income:	Expenses:
Á an Old Age Grant of R1 985,	Á rent R2 500
Á Child Grant of R480	Á transport R670
Á a Disability Grant of R1 985	Á cell phone R299
and a	Á pre-paid electricity R800
Á salary of R5 250.	Á water bill R350
	Á TV contract R250
	Á loan repayment R310
	Á furniture store account R570
	Á clothing store account R455

	Á groceries R3 200 Á medical expenses R120 Á This month, one of the children falls ill and they have additional medical expenses of R500 of medication.
--	---

(a) Draw up an income and expense statement for the household for this month.

FAMILY MONTHLY BUDGET

ITEM	INCOME	EXPENCES	TYPE
Old Age Grant	R1 985		Fixed
Disability grant	R1 985		Fixed
Child Grant	R480		
Salary	R5 250		
Rent		R2 500	
Transport		R670	
Cell phone		R299	
Prepaid electricity		R800	
Water bill		R350	
TV contract		R250	
Loan repayment		R310	
Furniture store account		R570	
Clothing store account		R455	
Groceries		R3 200	
Medical expenses		(R120 R500) R620	
TOTAL	R9 700	R10 024	

(b) What is the total difference between the income and expenses?

Difference Income – Expenditure

R9 700 – R10 024

(R324)

[The amount is negative which means that the income does not cover all the expenses]

(c) Which costs could be reduced in their budget?

This will depend on the needs of the family.

(d) If those costs were reduced, would the family have enough money to cover their expenses?

It could because they are over with a small amount. If they reduce some expenses, their income would cover all expenses.

1. Study the family budget for the month of December 2013, for the Chile family.

There are two adults and two school children in the family.

ITEM	INCOME	EXPENDITURE	
		FIXED	VARIABLE
Mrs. Chile	R9 500		
Mr Chile's	(a)		
Other income	(b)		
Bond repayment		(c)	
Food			(d)
Clothing account		(e)	
School fees		(f)	
Transport			(g)
Entertainment			(h)
Savings		(i)	
Car repayment		R1 300	
Municipal rates		(j)	
Electricity bill		R200	(k)
Cell phone contract		R700	
TOTAL	?	?	?
Surplus or Deficit?			

2. Complete the Chile family budget by using the following information.

(a) Mr Chile's income: He works 20 days per month at a rate of

(b) Additional income: Mr Chile owns additional property which he rents out to people at a fixed charge of R2 500 per month.

(c) The monthly bond repayments are fixed at R5 550 per month.

(d) The average amount spent on food each month comes to R2 500. Mrs. Chile believes that this should be increased by 10% due to recent food price increases.

- (e) Mr Chile pays a clothing account an amount of R800 per month. However, since he bought his children their school uniforms on account, he estimates that this amount will increase by a further 12%.
- (f) The school fees are R1 200 per child per month.
- (g) Transport costs are as follows:
- Á For the children, taxi fare per child = R5,00 per trip to school and another R5,00 each for the trip home. There are 20 school days in a month.
 - Á Mr and Mrs. Chile spend R 1 155
- Calculate the total amount that should be budgeted for transport.
- (h) The amount budgeted for entertainment is estimated at 5% of the combined income of Mr and Mrs. Chile.
- (i) Savings are currently 5% of Mrs. Chile's income.
- (j) The amount budgeted for municipal rates is 5% of the total income earned by the Chile household.
- (k) Is the Chile family within budget? Explain your answer.

2.2 Personal and household financial documents

Accounts

What is the meaning and definition of accounts?

An account is a record in an accounting system that tracks the financial activities of a person or a business. These records increase and decrease as the business events occur throughout the accounting period.

Accounts allow people to buy items even when they do not have the full amount of money needed to pay for those items immediately. There is a **limit** on the amount of money that people may spend on an account and an arrangement for when they must make **repayments**.

Account holders receive a **statement** of the account at the end of each month. The statement details how much money is spent on the account, any repayments that have been made, the due date and the amount for the next payment.

It can be:

- Á an arrangement with a bank to hold money and keep records of transactions.

Á an arrangement for regular dealings with a business.

Á an arrangement in which a person uses the Internet or email services of a particular company.

Shop Account Statements

At some clothing and food stores, it is possible to open an account, **buy goods on credit** and pay off what you owe the store on a monthly basis. Monthly payments are called **monthly instalments**.

Example

Mr Bear has an Actex store account. He receives the account statement shown below.

BISHOP **STATEMENT TAX INVOICE**

MR B. BEAR
1041 BREAD STREET
EAST LONDON
5200

0013010000011370690

STATEMENT PERIOD - 13/03/2022 - 12/04/2022

STATEMENT DATE - 12/04/2022

ACCOUNT NUMBER - 0013010000011370690

INTEREST RATE CHANGE
From 25 March 2022, the interest rate applicable to your Actex Account will increase from 18.80% to 19.35%

HOW TO PAY YOUR ACCOUNT
1. At any bishop store
2. Bank Transfer: Enquire at the shop
3. Online: Pay using your card or account no. on <https://actex.com/pay> now.
4. Easypay: Scan the barcode at any Palm stores, Ginger Tree, Sun-Berry Outlet or Spray Alert

1. At which five stores can Mr Bear use his store card?

Bishop; Palm Stores; Ginger Tree; Spray Alert and Sun-Berry Outlet

2. What is the Statement period? April 2022

3. How much did he pay in March 2022? R400

4. How much must he pay on his account? R290

- i. When is this amount due? **On the 1st of May**
- ii. Will he be charged extra if he pays the due amount late? **Yes**
5. What is the current balance for this statement? **R1 985.89**
6. How much credit does he still have available? **R1 412**
7. What is the difference between **R1 985.89** credit available and "credit available"?
8. How much is the balance brought forward from the previous statement?
R2 350.86
9. Does the amount due include interest? How much is the interest? **No**
10. How much did Mr Bear spend at Actex in the month of April 2022? **R0**

1. Study the following account statement and answer questions.

- (a) What is Ms. Nodudo's opening balance?
- (b) What is Ms. Nodudo's closing balance?
- (c) What is the name of the store in which Ms. Nodudo buys?
- (d) What is her account number?
- (e) How much is due on this statement?
- (f) How much is her credit limit?

Bank Accounts

Banks offer different types of accounts and services.

Savings account: A bank account that earns interest. You can use a savings account for short term savings.

Cheque or current account: A bank account that is used to deposit and withdraw money by visiting the bank branch, using an ATM or Internet banking or by writing a cheque. These are usually available to people who earn a regular income.

Fixed deposit account: This account is aimed at those who have a lump sum they want to invest over a fixed period of time (i.e. a medium or long-term saving). Interest is also earned on the investment.

Credit account (with credit card): An account either with a store or bank, that allows the account holder to purchase items now and pay for them later.

Debit account (with debit card): Debit cards can be used to pay for purchases. When it's swiped, money is deducted from the account. Credit this account.

Bank Statement

A bank statement is **an official list of everything paid into and out of a bank account.**

The statement includes **deposits, charges, withdrawals, as well as the beginning and ending balance for the period.** Account-holders generally review their bank statements every month to help keep track of expenses and spending, as well as monitor for any fraudulent charges or mistakes.

What must a bank statement show?

- Á Bank name and address
- Á Client's personal information: Address, Name and Surname
- Á The statement date, as well as the beginning and ending balance of the account.
- Á Details of each transaction: the amount, date, and payment that took place in the bank account, the period on which the deposits, withdrawals, cheques paid, and any service charges. **Debit transaction:** Amount of money paid out

of an account. **Credit transaction:** Amount of money deposited into an account

How are bank statements sent?

- Á Some banks email statements to customers as an attachment.
- Á Some bank automatic teller machines (ATMs) offer the option to print a summarized version of a bank statement, called a transaction history.
- Á Some institutions charge for paper statements, while many online-only banks require digital delivery.

2. Zola receives the following statement from her bank, detailing her transactions from 25 January 2013 to 20 February 2013. Study the statement and answer the questions that follow.

Date	Description	Amount	Amount	Balance
25/01/2013	Salary	8 000,00		8 050,50
27/01/2013	Car insurance		-100,00	7 950,50
01/02/2013	Electronic transfer Mr. Serei (RENT)		-3 000,00	4 950,50
01/02/2013	Debit order Healthsaver medical aid		-500,00	4 450,50
02/02/2013	Debit order Mobi contract		-250,00	4 200,50
03/02/2013	Debit order Supa Fashion Store		-300,00	3 900,50
05/02/2013	Purchase at Shop 'n Save		-2 000,00	1 900,50
14/02/2013	PAYMENT Mrs. S Khumalo	500,00		2 400,50
20/02/2013	Automechanix		-1 000,00	1 400,50
Total remaining:				1 400,50

(a) How can you tell the difference between the debits and the credits in this statement?

(b) List Zola's debits and credits for the month of January

(c) In the first line of this statement, Zola receives a salary of R 8 000. Look at the balance and work out what she had in the account before the payment was made.

(d) Zola receives some birthday money as well as her salary this month. Identify and write down the birthday transaction.

(e) How much money would she have been left with on 20 February 2013, if she hadn't received money for her birthday?

(f) Zola wants to save 15% of her remaining money this month. How much can she save?

Cell Phone Bill

Cell phone companies offer different cell phone packages. They are either pre-paid or contract accounts. You need to decide on your own needs, and then work out which account would be best for you.

Example

Presented below is an example of a Cell phone bill.

XXXbank

The power of money is inside X

Payment Method:

1) Pay at XXXbank branches by completing a XXXbank deposit slip to pay 'EThekwini Municipality' (bank account number is not required) OR

2) Pay electronically via your banks payment platforms :Select the pre-defined Beneficiary (eThekwini Municipality) linked to XXX bank EFT Bank Account Number 1107821126 OR

3) Pay via SWIFT address XXXSZAJJ to XXXbank EFT Bank account Number 1107821126.

NB: it is mandatory that you quote your Metro Bill Account Number in the reference field when submitting your payments.

3. Study the municipal bill received by Mrs. JG Zulu for services and answer questions.
- Name the five services she is paying for.
 - How much is she paying for each?
 - What is the opening balance for this invoice?
 - What is the closing balance for the month?
 - According to the bill, when did Mrs. JG Zulu last make a payment to the municipality?
 - How much was her last payment?

Receipt or Till Slips

Every time you buy an item from a shop, you should receive a till slip receipt. A receipt is a document acknowledging that a person has received money or property in payment following a sale or other transfer of goods or provision of a service. All receipts must have the date of purchase on them. It acts as a proof of payment for both your business and the customer.

Receipts, however, should be issued any time a payment is received from the customer. If you're accepting a payment that is made immediately for the goods or services, you don't need to issue an invoice, as proof of payment.

According to the IRS, a business should keep their receipts for **three (3) years**. If a business claimed a loss for any tax year, then the receipts for that year must be kept for **seven (7) years**. The **different types** of receipts are for Cash payment, Cleaning, Car/Vehicle, Credit card, Donation, Delivery, Hotel etc.

By law, South African till slips or receipts must include what is indicated in the labels below.

Example:

Name & address of the shop	SUNSHINE COFFEE SHOP HIGHVELD 9035																																						
Vat number	VAT No: 868048110	INV33711	Invoice number

4. Study the following till slip that Patty received when she bought groceries at the MZ Carriers and answer questions.

- Where is MZ Carriers located?
- On which date did Patty go to MZ Carriers? At what time?
- How did Patty pay for her shopping?
- How many items did Patty buy?
- How much does 750 ml of Bonaqua Berry cost at MZ Carriers?
- What is the total cost of the 5 items she bought?
- How much did she pay?
- Why do you think the amount is slightly different to the balance due?
- Who served Patty at the till? At which till? What is her number?
- What is the invoice number of the till slip?

Payslips

A payslip is a piece of paper given to an employee by an employer at the end of each week or month, which states how much money has been earned and how much tax has been taken off

MOONLIGHTCOURIERS

PAYSIP NO. 3 OF 2022

PO Box 76123, BLOEMFONTEIN, 9300;
Enquiries: info@moonlightcouriers.com;
Tel: 085 877 9994

PAYSIPS FOR THE MONTH OF MARCH 2022

Employee Name	Mr GN Couver	Paid Days	30
Gender	Female	LOP	0

OT: Over time; LOP: Leave without pay; PAYE: Pay As You Earn

EARNINGS		AMOUNT	DEDUCTIONS	AMOUNT
Basic		10 000,00	Salary advance	1 000,00
OT Hours	50		PAYE	1 065,25
Rate	75			
OT Payment		3 750,00		
Total payment		13 750,00	Total Deductions	2 065,25
NETT PAY		11 684,75		

What must a payslip show? Á Total pay before deductions ('gross amount'). Á Total pay after deductions ('net amount'). Á Amounts of any 'variable deductions'.	What can you use a payslip for? Á Applying for credit like a home loan or a phone contract. Á Negotiating your package with a prospective employer. Á Going into a rental agreement for a place to stay etc.
When should pay slips be issued? Á Payslips must be provided on or before payday. Á Your payslips can be used as proof of your earnings. Á Tax paid and any pension contributions. Á Employers can choose whether they provide printed or electronic (online) pay slips.	

5. Study the pay slip provided and answer questions.

PAYSIP NO. 1 OF 2022			
 MOONLIGHT COURIERS		PO Box 76123, BLOEMFONTEIN, 9300; Enquiries: info@moonlightcouriers.com ; Tel: 085 877 9994	
PAYSIPS FOR THE MONTH OF JANUARY 2022			
Employee Name	Mr GN Couver	Paid Days	30
Gender	Female	LOP	0
OT: Over time; LOP: Leave without pay; PAYE: Pay as You Earn			31 JANUARY 2022
EARNINGS		DEDUCTIONS	
	AMOUNT		AMOUNT
Basic	10 000,00	Salary advance	500,00
OT Hours	38	PAYE	1 145,00
Rate	R85 p/h	Medical Aid	799,00
OT Payment			
Total Income		Total Deductions	
NETT PAY (INCOME - DEDUCTIONS)			

(a) How many days did Ms. Noom work?

(b) Calculate the missing values in order to complete the payslip.

Quotations

A **quotation** is a document that a seller provides to a buyer to offer goods or services at a stated price, under specified conditions. **It represents your business identity and professionalism directly.** If it appears to be unpleasant and not well-structured, your clients will assume that your business runs the same way. Contrary to this, a good quote exhibits your attention to detail and the value of service you are pricing

SSR VERSPREIDERS		QUOTATION	
Box 78125, KIMBERLEY, 8301 ; Enquiries: simon@ssrverspreiders.com ; Tel: 085 877 8984		Date	26 April 2011
		NOTE: This quotation is only valid for 30 days.	
Customer Name	Mr GN Couver		
Address	1267 32nd Avenue; Clernaville; 3802		
Contact number	089 909 9909		
Description	QTY	UNIT	TOTAL
Basin new install	1	1 700	1 700
Toilet new install	1	1 900	1 900
Shower new install and shower door	1	4 800	4 800

Signature		Date	

6. Answer the following questions.
- How much will the client pay for materials?
 - How much will the client pay for labour?
 - What is the total amount due?
 - Will the quotation still be valid on the 5th of June?

Loans

A **loan** is an agreement of lending (borrowing) money with interest and a plan to repay it.

Types of loans: Personal Loan, Business Loan, Home Loan, Rental Deposit Loan etc.

When someone lends money to someone else, the borrower usually pays a fee to the lender. This fee is called **interest**. There are two simple kinds of interest. 'a n **compound**' **Simple** or **ó F l a t** interest is usually paid each year as the fixed percentage of the amount borrowed or lent at the start. With **ó c o m p o u n d ó** interest you also pay **interest on the interest**.

7. The following is an extract from a letter from FCS loans to Ms. Dube. It shows the amounts that are available on instant loan from FCS loans and the repayment involved.

Dear Ms. Dube

As a valued customer, we are pleased to offer you a personal loan at the following rates.

Loan amount	24 months	36 months	48 months	60 months
R4 000	R229	R174	R147	R131
R8 000	R448	R338	R285	R253
R16 000	R864	R643	R534	R470
R25 000	R1 344	R1 000	R830	R730

These loan repayments include a monthly premium of R3,95 per R1 000 of the loan and a monthly administration fee of R9,50 for your optional personal protection plan.

Regards

Secretariat

Answer the following questions.

If Ms.Dube chooses to borrow R16 000 from FCS loans, calculate how much he will finally repay if he takes the loan over:

(a) 24 months

- (b) 36 months
- (c) 60 months.
- (d) Do you advise her to borrow for a longer or shorter time?

Invoices

An invoice is a document given to the buyer by the seller to collect payment. It includes the cost of the products purchased or services rendered to the buyer. Invoices can also serve as legal records, if they contain the names of the seller and client, description and price of goods or services, and the terms of payment.

There are different types of invoices such as, electronic, online, mobile and hand-written invoices. A good, legally-sound invoice should contain all the information the customer will need to make payments and provide an avenue to address any questions.

Elements of an Invoice

- Á The word "**Invoice**" and the company logo must be prominent on the document so that they can be identified easily.
- Á Every invoice must have a unique identifier like an **invoice number**, purchase order number, or reference number to distinguish it from the rest of the seller's invoices.
- Á Recording the **date of service rendered** or date of sale can help simplify cataloguing.
- Á The **date of sending the invoice** must be included to ensure payments are made on time.
- Á The invoice should clearly show the **seller's name and contact information** to ensure the customer can contact you for any queries.
- Á The **client's contact information** must also be included to ensure legality of the document.
- Á All the **company's terms and conditions**, including due dates and penalties for non-payment or partial payments, must be clearly included in the invoice.
- Á The invoice must **describe each product or type of service rendered**.
- Á The **cost of each individual item or service** must be included.

- Á The **taxable amount** for the products or services must be included.
- Á The **total amount due** for payment must be clearly included in the invoice.
- Á Invoices **can be personalized** by including a customized thank-you note.

Tips for invoicing

Here are some tips to help you make the best use of your invoices and ensure that you get paid promptly:

- Early invoice payments and automated invoicing
- Make the invoice and payment process more convenient for customers
- Use recurring invoicing, if applicable
- Negotiate and establish payment terms in writing
- Get upfront payments
- Work on creating closer relationships with clients
- Hold the work or stop projects if a client doesn't pay on time

UNIT 3

NUMBER SENTENCES (ALGEBRAIC LANGUAGE)

3.1 Identify variables and constants in given formulae

Words	Flow diagram	Expression
Multiply a number by two and add six to the answer.	$\rightarrow \boxed{\times 2} \rightarrow \boxed{+ 6} \rightarrow$	2×6

In number sentences we usually write a box to represent the unknown but in algebraic expressions, instead of writing a box we may write a single letter symbol like x or a .

An algebraic expression indicates a sequence of calculations that can also be described in **words** or by means of a **flow diagram**. The flow diagram illustrates the order in which the calculations must be done.

In algebraic language, **the multiplication sign is usually omitted**. So, we write $2x$ instead of $2 \times x$. We also write $2x$ as $2x$.

Grade 8 DBE Workbook R8
11th edition

$x + 23$

[expression]

$x + 23 = 45$

[equation]

In the **expression**, $x + 23$, the letter symbol x can be replaced by many different input numbers. The symbol x represents a variable. If, however, the expression $x + 23$ is equal to 45 as in the number sentence $x + 23 = 45$, the symbol x represents only one value and that is 22.

In the expression $x + 23$, the number 23 is a constant. In the number sentence $x + 23 = 45$, x is an unknown value.

1. Complete the following table:

	Words	Flow diagram	Expression
(a)	Add three to a number and then multiply the answer by two.	$\rightarrow \boxed{x + 3} \rightarrow \boxed{\times 2} \rightarrow$	
(b)	Add 7 to a product of a number and 4	$\rightarrow \boxed{4x} \rightarrow \boxed{+ 7} \rightarrow$	$7 + 4x$

2. Write the following expressions in “normal” algebraic language

(a) $\zeta - \omega - \omega =$

(b) $\omega \zeta =$

(c) $\omega - \tau - \omega$

3. The diagrams below represent arrangements of small circles. In every arrangement there are two rows of circles.

DBE Textbook
Page 174, Grade 7

- What remains the same in the diagrams above?
- What changes in the diagrams? In other words, what are the variable quantities in the situation?
- How many circles will diagram 11 have if the pattern is extended? Explain.
- Write the rule for the pattern in terms of ω
- What does the letter symbol ω represent in the rule $\zeta - \omega$?

3.2 Determine the numerical value of an expression by substitution.

3. Say whether it is an expression or an equation

(a) $9 - 7 = 16$

(b) $11 - 2$

(c) $\omega - 4 = 12$

(d) $14 - \omega$

4. Identify variables and constants and coefficients in the following expression in

$\zeta \omega^2 - \omega - \phi$

5. Write number sentences for each of the following statements.

- Three plus a certain number equals 0.
- Two times a certain number p decreased by eight is equal to twelve.
- Thabo has R50 with which to buy chocolates for friends. Each chocolate costs R6. How many chocolates can he buy for that amount? Let ω represent the number of chocolates.

6. Solve for ω and check your answer by substitution

(a) $\omega - 5 = 9$

(b) $\omega - 7 = 19$

(c) $\omega - 18 = 34$

(d) $23 - \omega = 43$

UNIT 4

NUMERIC AND GEOMETRIC PATTERNS

4.1 Investigate, extend and describe numeric and geometric patterns

1. What are the next three numbers in each of these sequences?

3; 6; 9; 12; 15; _____

3; 6; 12; 24; 48; _____

3; 6; 12; 21; 33; _____

It is important to give at least 3 or 4 terms in each pattern in order to be able to continue with the pattern.

Numeric Patterns

Each number in the given sequences can be formed from the previous number by performing the same or a similar action. We say there is a **pattern** in the sequence. This is called a **numeric pattern**. Each number in a pattern is called a **term**.

Patterns with a common difference

A sequence can be formed by repeatedly adding or subtracting the same number. In this case the difference between one term and the next is constant. In the following example, the common difference is 4.

Example:

Patterns with a constant ratio

A sequence can be formed by repeatedly multiplying or dividing by the same number. In this case the ratio between one term and the next is constant. In the following example, the constant ratio is 2.

Example:

Patterns with neither common difference or constant ratio

A sequence can also be formed in such a way that neither the difference nor the ratio between one term and the next is constant. In the following example, there is, a pattern in the differences between the terms, which makes it possible to extend the sequence. Consecutive numbers, starting with 4, are added to form the next term.

Example:

2. Extend the following patterns and specify the relationship between consecutive terms.

- (a) 80; 85; 90; 95; ____; ____
- (b) 200; 175; 150; 125; ____; ____
- (c) 20; 25; 35; 50; ____; ____
- (d) 5; 20; 80; 320; ____; ____
- (e) 1; 5; 3; 10; 7; 15; ____; ____
- (f) 625; 125; 25; 5; ____; ____
- (g) 6; 18; 54; 162; ____; ____
- (h) 0,9; 0,7; 0,5; 0,3; ____; ____
- (i) 1; 1; 2; 3; 5; ____; ____
- (j) $\frac{6}{7}$; $\frac{5}{7}$; $\frac{4}{7}$; ____; ____; ____

Geometric Patterns

A **geometric pattern** is the arrangement of objects, shapes, drawings, diagrams into a certain order or rule as shown in the following figure. It is very important not

to translate the geometric pattern into a numeric pattern but to rather structure and interpret it vertically and horizontally. Drawing the next diagram makes it easier for one to see how the pattern extends.

To get the next diagram, one needs to add one circle horizontally and one circle on both arms.

Example:

Diagram 1

Diagram 2

Diagram 3

Diagram 4

3. Study the following geometric patterns and draw figure 5 and describe how each pattern grows or extends.

(a)

1

2

4.2 Patterns given in flow diagrams: input and output diagrams

Flow diagrams are another way of displaying or representing patterns. A relationship between two quantities can be shown with a flow diagram. A flow diagram has numbers that are called inputs and outputs. Each **input number** in a flow diagram has a corresponding **output number**. The first (top) input number corresponds to the first output number. The second input number corresponds to the second output number, and so on. We operate the input with the rule to get the output.

1. Study the following pattern.

- (a) Draw the 5th diagram.
 (b) Translate the pattern into a flow diagram.

- (c) What rule did you use to complete the pattern?

2. Complete the flow diagrams below.

(a)

(b)

3. Study the following pattern.

(a) Translate the information into a flow diagram.

(b) What rule did you use to complete the flow diagram?

4.3 Patterns given in tables

Patterns can also be represented using tables which is a useful way to record patterns. The first row of a table displays **input values (term number or position)** and the bottom row(s) display(s) **output numbers or terms**. The rule is used to generate the output values.

Term number (Position)	1	2	3	4	5
Term	Term1(T_1)	Term 2(T_2)	Term 3(T_3)	Term 4(T_4)	Term 5(T_5)

1. Complete the following tables using the given rules.

(a) Add 37

Term number (Position)	1	2	3	4	5	6	7	8	9	10
Term			40							

(b) Multiply by 7

Term number (Position)	1	2	3	4	5	6	7	8	9	10
Term										

(c) Divide by 3

Term number (Position)	1	2	3	4	5	6	7	8	9	10
Term										

(d) Multiply by 3 and add 5

Term number (Position)	1	2	3	4	5	6	7	8	9	10
Term										

(e) Multiply by 3 and subtract 5

Term number (Position)	1	2	3	4	5	6	7	8	9	10
Term										

Analysing diagrams patterns

Example

In a restaurant, one table sits 4 people, two tables sit 6 people, three tables sit 8 people, etc.

(a) Determine how many people would sit in 4 tables.

Note: In each diagram there are two people sitting opposite each other on the table and two more at the tables on the edges (one at the head and one at the foot).

In **diagram 4**, we have **four pairs** of people sitting opposite each other on the **4 tables**. There is also one at the **head** and **foot** of the table.

Answer: 4 2 2 10

(b) Determine how many people would sit in 5 tables.

Hint: Draw the 5th diagram and analyse the diagram.

In **diagram 5**, we have should have **five pairs** of people sitting opposite each other on the **5 tables**. There is also one at the **head** and **foot** of the table.

Answer: 5 2 2 12

(c) Determine how many people would sit in 15 tables.

Hint: Drawing will take a long time and it is important to come up with another strategy. Let us introduce a table.

Looking at the previous analysis, in diagram 15, we should have **fifteen pairs** of people sitting opposite each other on the **15 tables**. There is also one at the **head** and **foot** of the table.

Answer: 15 2 2 32

(d) Determine how many people would sit in any number (**n**) of tables.

Looking at the previous analysis, in diagram **n**, we should have **n pairs** of people sitting opposite each other on **n tables**. There is also one at the **head** and **foot** of the table

Answer: n 2 2 2n + 2

Using the table

Example

In a restaurant, one table sits 4 people, two tables sit 6 people, three tables sit 8 people, etc.

Term number (Position)	1	2	3	4	5	15	n
Term	4	6	8	10	12	32	$2n + 2$

Common difference

2 2 2

Term 1 (T_1):	1	2	2	4
Term 2 (T_2):	2	2	2	6
Term 3 (T_3):	3	2	2	8
Term 4 (T_4):	4	2	2	10
Term 5 (T_5):	5	2	2	12
Term 15 (T_{15}):	15	2	2	32
Term n (T_n):	n	2	2	$2n + 2$

The difference between the terms is 2. We therefore call 2 the **common difference**.

We multiply the term number by the common difference and then add 2.

Term n (T_n) $2n + 2$ meaning we can use this formula to get any term number.

2. A pattern with matches is shown below.

Diagram 1

Diagram 2

Diagram 3

(a) Explain how the pattern is formed.

(b) Copy and complete the table.

Term number (Position)	1	2	3	4	5		9	17	n
Number of matchsticks									

- (c) What rule did you use to complete the table?
- (d) How many matches are needed to form Figure number 9 or term 9?
- (e) How many matches are needed to form Figure number 17? Explain
- (f) What rule did you use to calculate the number of matches in question (e)?
- (g) Copy the flow diagram below and use it to write down the rule that you can use to calculate the number of matches needed for any figure in the pattern.

3. Another pattern with matches is shown below.

- (a) Explain how the pattern is formed.
- (b) Copy and complete the table

Term number (Position)	1	2	3	4	5		9	20	n
Number of matchsticks									

- (c) What rule did you use to complete the table?
- (d) How many matches are needed for Figure 9 or term 9?
- (e) How many matches are needed for Figure 20 or term 20?
- (f) What rule did you use to calculate the number of matches in question (e)?
- (g) Copy the flow diagram below and use it to write down the rule that you can use to calculate the number of matches needed for any figure in the pattern.

4. Study the pattern below.

- (a) Draw the 5th diagram
 (b) Explain how the pattern is formed.
 (c) Copy and complete the table using the pattern in 4.

Term number (Position)	1	2	3	4	5		9	20	n
Number of circles									

- (d) Explain how the pattern will extend.

4.4 Equivalent forms: Verbally, Flow diagrams, Tables and Equations

When patterns of different forms give the same results, we say they are equivalent forms of patterns. Different forms of patterns can be presented in tables, flow diagrams, diagrams and verbally.

1. Use the geometric pattern to develop a table, flow diagram and describe how the pattern extends. Write a matching numeric pattern for the geometric pattern.

GEOMETRIC PATTERN	NUMERIC PATTERN
VERBAL DESCRIPTION	VERBAL DESCRIPTION
FLOW DIAGRAM	FLOW DIAGRAM

TABLE									
Term number (Position)	1	2	3	4	5		20	n	
Term	6	12							
GENERAL RULE OR EQUATION									
Term n (T_n) =

UNIT 1

MEASUREMENT: Length, Mass and Capacity

1.1 Length

Measuring a length means measuring of the length of objects using measuring instruments such as a ruler, meter stick, tape measure, trundle wheel, and a builder's tape. The length of a pencil can be measured in centimetres and millimeter using a ruler. The height of a person can be measured in metres using a tape measure. Examples of measuring instruments are shown below.

Measurement of length is recorded in units of length such as kilometres (km), metres (m), centimetres (cm) and millimetres (mm). Length can also be expressed in fractions and decimal fractions.

We can convert between units of length as shown in the following examples.

Á 1 cm is the same as 10 mm

Á 3 cm strip is the same length as the 30 mm strip.

Á $2 \frac{5}{10} \text{ cm}$ can be written in decimal form as 2,5 cm or 25 mm.

1. Write the following in meters and centimetres.

Example: 7 300 cm = 7m and 300cm

- (a) 63 cm = _____
(b) 698 cm = _____
(c) 741 cm = _____

2. Express the following measurements in metres (m).

- (a) $\frac{9}{10}$ cm = _____
(b) $6\frac{5}{10}$ km = _____
(c) 5,6 mm _____

3. Complete the table by filling in the missing units.

No.	Kilometres (km)	METRES (m)	Centimetres (cm)	Millimetres (mm)
(a)	3 km		30 000 cm	
(b)		110 m	1 000 cm	

Solve problems in contexts involving length.

Common fractions and decimal fractions forms part of length:

1 km is equal to 1 000 m: $\frac{500}{1000}$ kilometre 500 m or 0,5 km

$\frac{250}{1000}$ of a kilometre 250 m or 0,25 km

First work through the examples and then solve the problems using fractions and decimal fractions:

1. I bought 4 200 mm and then 3 300 mm of string.
(a) How much string did I buy?
(b) Write your answer in mm and cm and then in m.
2. Nelly had 4 800 metres hosepipe, she cut a 2 550 metres piece and used it for gardening
(a) How many meters does she have left?
(b) Write the answer in kilometers.
(c) Write the answer in (b) as a common fraction.

3. Lebo work for 8 hours per week in the garden and Thabo work for 6 hours in the garden. They are paid R 566 in total.
- How many hours did they work altogether?
 - How much does each of them earn in one hour?
 - How much did Lebo earn more than Thabo?

1.2 Mass

We use scales to measure mass and weight. Most people use both mass and weight as if they are the same, though they are different. The **mass** of an object is how much **matter** it contains and it does not change. The weight of an object changes according to gravity. An object weighs six times more on earth than on the moon, and weighs nothing in empty space, even though its mass remains the same everywhere.

A balance scale measures mass. A spring scale measures weight. On earth both types of scale give us the same approximate reading, so for everyday practical activities we can also use spring scale and balance scale to measure mass. Examples of measuring instruments are shown below.

Kitchen Scale	Spring balance	Bathroom Scale	Balance Scale
			

1. Complete the following table

No.	Object	Appropriate unit of measurement	Appropriate measuring instrument
(a)			

(b)			
(c)			

2. Convert the kilograms to grams

- (a) 4,73 kg
- (b) 5,4 kg
- (c) 0.68 kg
- (d) 0.07 kg

3. Convert the grams to kilograms

- (a) 6 070 g
- (b) 9 200 g
- (c) 320 g
- (d) 850 g

4. How many grams are in each of the following?

- (a) $\frac{1}{1000}$ of a kg
- (b) $\frac{1}{100}$ of a kg
- (c) 0,2 of 10 kg

5. Solve problems in contexts involving mass

- (a) A 500 g bag of flour costs R15,50. How much will 2,5 kg cost?
- (b) My brother has a mass of 25,43 kg and my sister is double that. What is my sister's mass?
- (c) A shopkeeper sold 15,26 kg of rice on Friday, Saturday sold 16,22 kg and 9,60 kg on Sunday. He took the rice from a 50 kg bag. How much rice was left in the bag?

(d) My father eats 5 g of chocolate a day. How many grams will he eat in 2 weeks?

(e) A crate of apples has a mass of 56 kg.

- If $\frac{1}{5}$ of the apples are rotten, how many kilograms can still be sold?.
- Write the answer above in grams

1.3 Capacity / Volume

Capacity is the total amount of space inside a container.

Volume is the amount of space occupied by something.

When the container is filled up to the top, the volume of the liquid and capacity of the container will be same.

The four glasses have the same capacity, but they contain different volumes of water

- 1 litre 1 000 ml
- $\frac{1}{2}$ litre 500 ml
- $\frac{1}{4}$ litre 250 ml
- $\frac{1}{8}$ of a litre 125ml

Grade 5 DBE textbook page 105 -

1. Add the volume of the three objects below and convert to litres.

2. Compare these numbers. Use $>$, $<$ or $=$ to replace the

- (a) 2 l 7 0 5 2 ml 7 ml
 (b) 3 l 2 300 ml
 (c) 8 080 ml 8 080 ml
 (d) 4 l 3 006 4 l 6 003

3. Arrange the following measurements from the smallest to the biggest:

- (a) 4 2 2 0 ml ; 4 l ; 4 005 8
 (b) 2 7 , 5 l ; $\frac{1}{4}\text{ l}$ 6 ; 4 7 06 , 1 009 ; 6
 (c) $7\frac{1}{4}\text{ l}$ 900 ml 7 l ; 6 0 8 , 4 9

Problems in context involving capacity and volume:

1. Study the following diagram and answer questions.

- (a) Which combination of spoons will be used to measure 30 ml of medicine?
 (b) Which combination of spoons will be used to measure 20 ml of medicine accurately?
 (c) Which combination of spoons will be used to measure 10 ml of medicine accurately?
 (d) If Tando drinks 7,5 millilitres of medicine from the 15-millilitre spoon. How many millilitres will be left?
2. Mr Jacobs uses water as follows weekly: 8 litres to wash the dishes; 50 litres to bath; 3,5 litres for cooking and 30 litres for drinking. How much water does he use weekly?
3. The chef makes 10 litres of cocktail with granadilla juice, cranberry juice and lemonade. He uses 550 millilitres of cranberry juice and 2,5 litres of lemonade. How many litres of granadilla juice are in the 10 litres of fruit punch?
4. Which is less: 9 bottles of 275 millilitres or 3 litres.

5. Patty makes 12 litres of fruit punch with granadilla juice, cranberry juice and lemonade. She uses $\frac{2}{5}$ millilitres of a cranberry juice and 2,5 litres of lemonade. What fraction of granadilla juice is in the 12-litre fruit punch?

6. I have a 5-litre bucket and a 250 ml cup.

- (a) How many 250 ml cups will be needed to fill one bucket of water?
(b) What fraction of a litre is 250 ml?

Consolidation

- I bought a 4 700 meters and 2 550 meters of hosepipe from the store. How many meters did I buy altogether?
(a) Write the answer in kilograms.
(b) Write the answer as a fraction.
- Thato ran 2000 m in 1 hour. If he ran an hour longer at the same pace, how many kilometres would he have run?
- Arthur has to travel 12 900 kilometres. He travelled 420 km on the first day of his journey, 830 km on the second day. How many more kilometres must he still travel to reach his destination?
- In a marathon Peter ran 7, 4 km and Nikki ran 6320 meters. How much further did Peter run than Nikki?
- Andile and Simi have ropes which when joined together are 2 572 m long. Andile's rope is 3 times longer than Simi's rope.
(a) How long is Andile's rope?
(b) How long is Simi's rope?
- Busi weighs 112 kilograms. Her husband weighs 32 kilograms less than her mass. How much does her husband weigh?
- A farmer sells potatoes at R49,99 a bag. Each bag weighs 10 kg and he supplies five retail stores with 20 bags each
(a) How many kilograms will be received by each retail store?
(b) How much will he be paid by each retail store?

8. When my mother buys washing powder, she pays R45,65 for a 3 kg bag. How much does she pay for a 1 kg bag?
9. I was given a 4 kg bag of rice to take to my grandmother's house. On the way to my grandmother's house, the boy tore and a quarter of many kilograms of rice will my grandmother have to cook?
10. One container holds 1,6 litres, a second holds 1150 millilitres and a third holds 2 litres 460 millilitres. What is the three containers total capacity? Write the answer in litres.
11. Fifteen ladies drank tea in a restaurant. They drank 75 cups of tea altogether.
 - (a) How many cups did each lady drink, if they drank the same amount of tea?
 - (b) How much tea will five cups be, if a cup is 250 ml? Give your answers in litres.
12. Sandy drank 1 500 millilitres of water and Janine drank 750 millilitres.
 - (a) How much water did they drink altogether?
 - (b) Write the answer in litres.
 - (c) Write the answer as a fractions.
13. In a bucket there are 5 litres of juice. How many learners can get 250 millilitres of juice?
14. The mass of 1 litre of water = 1 kg. Complete the following
 - (a) 2 litre of water
 - (b) 500 ml of water
 - (c) 125 ml of water
 - (d) 1,5 litres of water
 - (e) 4,55 litres of water

UNIT 2

CONSTRUCTION OF GEOMETRIC FIGURES

2.1 Revision

1. In Year 2 you learnt that angles are classified into types. Copy and complete the table. The first one has been done as an example for you.

ANGLE	SIZE OF AN ANGLE	SKETCH OF AN ANGLE
Acute angle	Between 0° and 90°	
Right angle		
Obtuse angle		
Straight angle		
Reflex angle		
Revolution		

2. Give five everyday examples of right angles or 90° angles.

2.2 Measuring angles using a protractor.

Angles can be measured informally using a folded piece of paper; however, there is a special instrument for measuring angles. It is called a **protractor**. Look at the picture of a typical protractor with its important parts labelled. Protractors can be big or small but they all measure angles in exactly the same way. The size of the protractor makes no difference to the angle's size. The unit of angles is a **degree** ($^\circ$).

1. Study the pictures. What are these people using their protractors for?

DBE Workbook 1
Grade 7 Page 54

Measuring angles using a protractor.

You will need a pencil, ruler, eraser and a protractor to measure angles.

Step 1: Check to see if the arms are long enough to measure. Are the angle arms long enough?

DBE Textbook
Grade 7 Page 61

The angle arms must be a little longer than the distance from the origin of the protractor to its edge. If they are too short, use a sharp pencil and a ruler to make them longer. Be careful to line the ruler up with the arm.

Step 2: Line up the angle and your protractor

DBE Textbook Grade 7
Page 62

Place your protractor on top of the angle. Make sure of the following:

- Á the origin is exactly on the vertex of the angle, and
- Á the base line is exactly on top of one of the arms of the angle.
- Á Keep adjusting the position of the protractor until the origin and the base line are exactly lined up.

Once your protractor is in the correct place, keep a finger on the protractor to stop it from moving. If it moves ... start again! You are now ready for measurement.

DBE Textbook Grade 7
Page 63

Step 3: Measure the angle.

A protractor gives a clockwise degree scale and an anticlockwise degree scale. You choose the correct scale by

finding the one that starts with 0° on the angle arm. Look at where the other angle arm passes under the degree scale. That is where your measurement is.

You can also place the protractor on the angle using the other arm. Then the correct position looks like this:

Here we must use the outer scale (goes clockwise from the base line). The angle in the pictures above is 37° .

Do you agree? Do you see that there are two ways to measure an angle?

1. Measure and name each of the following angles. Remember to extend the arms of the angles to help measure.

DBE Workbook 1
Grade 7 Page 47

(a)

(b)

2. Write down the size of each of the interior angle that is indicated.

DBE Workbook 1
Grade 7 Page 48

No	Measured Angle	Size	No	Measured Angle	Size
(a)		60°	(b)		
(c)			(d)		

3. Mark three (3) angles on the picture and measure them.

DBE Workbook 1
Grade 7 Page 53

(a) _____ (b) _____ (c) _____

2.3 Constructions of angles

Use a ruler, pencil and protractor to **construct** angles. An example of a 45° is given.

Step 1: Draw a line segment. Label it AB

Step 2: Place the protractor so that the origin (small hole) is over point A. rotate the protractor so that the base line is exactly along line AB

Step 3: Using (in this case) the inner scale, find the angle desired in Step 1. It is 45°

Step 4: Make a mark at this angle and remove the protractor.

Step 5: With the protractor or a ruler draw a straight line from A to the mark you just made. Label this point C.

Step 6: The line drawn makes an angle BAC that is 45° .

We can also represent it as $\angle BAC = 45^\circ$

1. Draw a 45° angle ABC
2. Draw a 100° angle CDE
3. Draw 175° angle JKL

2.4 Construction of circles and parts of a circle

A circle is a two-dimensional shape made by drawing a curve that is always the same distance from the centre. We need a special instrument for drawing circles. It must have a pointy tip, like the centre pencil. It must also have a drawing tip, like the pencil you moved. If you can set the distance between these two tips, you can draw circles of any radius. This instrument is a pair of compasses, or often just a compass.

1. Use the following steps to help you draw a circle with a radius of 2 cm.

Step 1: Place a point on your exercise book using a lead pencil and label it O as shown. This point is the centre of your circle.	
Step 2: Place the pointed tip on the zero line of your ruler. Carefully widen the angle between the arms. Move the pencil tip until it is exactly at 2 cm. Make sure that the pointed tip is still on zero. Be careful not to change the gap once it is set to 2 cm. This distance is the radius of the circle.	
Step 3: Gently push the pointed tip into point O. Push just deep enough into the paper to keep it in place.	
Step 4: Hold the handle between the forefinger and thumb of your writing hand. Keep your other hand out of the way. Use only one hand when you draw a circle with a compass.	
Step 5: Twist the handle between your thumb and forefinger. If you are right-handed, it is easiest to twist the compass clockwise. If you are left-handed, turn the compass anticlockwise. Let the pencil tip drag over the paper. Do not push down too hard on the pencil. Rather, push down lightly on the pointed arm as you draw. The pencil tip must move smoothly and easily.	

2. Draw circles with the following radii:

(a) 40 mm

(b) 3,5 cm

(c) $5\frac{1}{2}$ cm

DBE Textbook Grade 7
Page 73

Parts of a circle

An **arc** is a small part of a circle. We use the term circumference when we refer to the distance around a circle or around any other curved shape.

	This is only part of a circle called an arc. 	This arc is a quarter circle. 	This arc is just more a semi-circle 	This arc is almost a full circle 	This is a full circle 
 edge of a circle is called the circumference	The distance around the outside  A centre is a point that is the same distance to every point on the circumference.				
A radius is the distance from the centre to the circle or circumference. Radius = $\frac{1}{2}$ diameter 	A diameter is the distance from one side of a circle to the other going through the centre. Diameter = 2 x radius 				

3. Label the following circle

2.5 Construction of parallel and perpendicular lines

Perpendicular lines

Perpendicular lines are straight lines that meet each other at an angle of 90° . The sketch shows two perpendicular lines.

We say: CD is perpendicular to EF.

We write: $CD \perp EF$

Constructing perpendicular lines

There are several methods we can use to construct parallel lines.

Method 1

- Follow the steps to draw perpendicular lines. You will need a ruler, a pencil, an eraser and a protractor.

Step 1: Draw a line segment and name it AB.	
Step 2: Mark a point on line AB and name it C.	
Step 3: Use your protractor. Put the origin on point C and mark a point on 90° and name it D.	

Step 4: Join point C and D with a line. AB is perpendicular to CD $AB \perp CD$	
--	---

2. Measure angle ACD, angle BCD and ACB to check how accurate your construction is.

Angle ACD = _____ Angle BCD = _____ Angle ACB = _____

Method 2

You will need a ruler, pencil, compass and an eraser.

3. Follow the steps to construct perpendicular lines.

Step 1: Draw a line and mark point A and B on it.	
Step 2: Put the compass point on A, open it approximately two-thirds of the line length, and draw an arc.	
Step 3: Do not change the width of the compass. Move the compass point to B and draw another arc which crosses the first (1) arc at two points.	
Step 4: Label the points where the arc intersect C and D.	
Step 5: Draw a line through point C and D bisecting line AB at E. AB is perpendicular to CD $AB \perp CD$	

4. Measure angle AEC and angle BED to check how accurate your construction is.

Angle AEC = _____

Angle BED = _____

Parallel lines

Parallel lines are straight lines that never touch each other and are always the same distance apart. They have the same direction. The sketch shows two parallel lines.

We say: AB is parallel to CD. We write: $AB \parallel CD$

The arrows on the middle of the lines show that the lines are parallel to each other.

Constructing parallel lines

There are different methods of constructing parallel lines. We will share three of those methods.

Method 1

- Follow the steps to draw perpendicular lines. You will need a ruler, a pencil, an eraser and a protractor.

Step 1: Draw a line segment and name it AB.	
Step 2: Mark two (2) points on line AB and name them C and D.	
Step 3: Use your protractor. Á Put the origin on point C, mark a point on 90° and name it E. Á Put the origin on point D, mark a point on 90° and name it F.	
Step 4: Á Join points C and E with a line. Á Join points D and F with a line CE is parallel to DF; $CE \parallel DF$	

Method 2

6. Follow the steps to draw perpendicular lines. You will need a ruler, a pencil, an eraser and a protractor.

Step 1: Draw a line segment AB and a point C above the line. 	Step 2: Place the compasses on point C and set its width to a little more than the distance to the line AB. The exact distance is not important. 
Step 3: Draw a wide arc from the right of C around so it crosses the line AB at two points. Label the left point D. 	Step 4: Without adjusting the compasses' width, move the compasses to D and draw an arc across the line AB. Label this point E. 
Step 5: Without adjusting the compasses' width, move the compasses to E and draw an arc across the large arc to the right of C. Label this point F. 	Step 6: Draw a straight line through points C and F. 
Done. The line AB is parallel to the line CF or $AB \parallel CF$	

2.6 Construction of triangles

In this section, you will learn how to construct triangles. You will need a pencil, a protractor, a ruler and a compass.

A triangle has three sides and three angles. We can construct a triangle when we know some of its measurements, that is, its sides, its angles, or some of its sides and angles.

Constructing triangles when three (3) sides are given.

- Study the following steps that describe how to construct $\triangle ABC$. Triangle ABC has side lengths of 3 cm, 5 cm and 7 cm.

Step 1: Draw one side of the triangle using a ruler. It is often easier to start with the longest side.

Step 2: Set the compass width to 5 cm. Draw an arc 5 cm away from point A. The third vertex of the triangle will be somewhere along this arc.

Step 3: Set the compass width to 3 cm. Draw an arc from point B. Note where this arc crosses the first arc. This will be the third vertex of the triangle.

Step 4: Use your ruler to join points A and B to the point where the arcs intersect (C).

- Work in your exercise book. Follow the steps in (1) to construct the following triangles:

- ABC with sides 6 cm, 7 cm and 4 cm
- KLM with sides 10 cm, 5 cm and 8 cm
- PQR with sides 5 cm, 9 cm and 11 cm

2.7 Construction of quadrilaterals

A **quadrilateral** is a closed shape with four straight sides and four angles.

- Match the following quadrilaterals and their descriptions.

(a) Rhombus	i. One pair of opposite sides are parallel
(b) Square	ii. Two pair of opposite sides are equal and parallel. Opposite angles equal
(c) Rectangle	iii. A polygon with four equal sides and equal angles
(d) Kite	iv. Two pair of opposite sides are equal and parallel. All angles are 90°
(e) Parallelogram	v. All sides are equal and opposite angles are equal
(f) Trapezium	vi. Two pairs of adjacent sides are equal. One pair of opposite angles equal

The focus of this section is construction of quadrilaterals using appropriate Mathematical instruments.

Constructing a square

- Use the following steps to help you construct a square. You will need a ruler, compass, eraser and a sharp pencil.

Step 1: We start with a given line segment AB. This will become one side of the square.	
Step 2: Extend the line AB to the right.	
Step 3: Set the compasses on B and any convenient width. Scribe an arc on each side of B, creating the two points F and G.	
Step 4: With the compasses on E and any convenient width, draw an arc above the point B.	
Step 5: Without changing the compasses' width, place the compasses on F and draw an arc above B, crossing the previous arc, creating point H.	
We now create four sides of the square the same length as AB	
Step 6: Draw a line from B through H. This line is perpendicular to AB, so the angle ABH is a right angle (90°); This is the second side of the square	Step 7: Set the compasses on A and set its width to AB. This width will be held unchanged as we create the square's other three sides.

Step 8: Draw an arc above point A.	Step 9: Without changing the width, move the compasses to point B. Draw an arc across BH creating point C - a vertex of the square.
Step 10: Without changing the width, move the compasses to C. Draw an arc to the left of C across the exiting arc, creating point D - a vertex of the square.	Step 11: Draw the lines CD and AD
Done. ABCD is a square where each side has a length AB	

- Use a compass and a ruler to construct a square ABCD with a side length of 5 cm.

Constructing a parallelogram from parallel lines

- Use the following steps to construct quadrilaterals. You will need a ruler, a pencil, an eraser and a pair of compasses.

Step 1: From line segment AB, mark a point D. This point D will be on the line that will be parallel to AB. Draw a line from A through D.

Step 2: Draw an arc from A that crosses AD and AB. Keep the same compass width and draw an arc from point D as shown.

Step 3: Set the compass width to the distance between the two points where the first arc crosses AD and AB. From the point where the second arc crosses AD, draw a third arc to cross the second arc.

Step 4: Draw a line from D through the point where the two arcs meet. DC is parallel to AB.

Step 5: Use the compass to measure the distance from A to B. Put your point on D and make an arc on DC and name it E. Join point B and E.

Constructing other quadrilaterals using circles on circles.

You will need a pencil and a ruler to draw quadrilaterals. A structure of circles is given.

7. Use the following structure to help you draw quadrilaterals. You may draw more than one (1) quadrilateral on the given structure. See an example of a parallelogram.

(a) Rectangle EFGH

(b) Rhombus PQRS

(c) Trapezium JKLM

(d) Kite OPQR

UNIT 3

GEOMETRY OF STRAIGHT LINES

3.1 Defining lines

Line Segment

Study the following quadrilateral. It has four sides. Each side of a quadrilateral is a line segment. A line segment has definite starting point and a definite ending point.

ABCD therefore has line segment AB, BC, CD and AD

Ray

The line below has a definite starting point and no definite ending point. The arrow shows that the line is continuing to infinity.

Straight line

A straight line is a line with no definite starting point nor definite ending point, it will go on and on to infinity. The arrows on both ends indicate that the line does not stop.

Parallel lines

Two or more lines that are equidistant apart are called parallel lines.

The symbol $\parallel$ is used to denote parallel lines.

EF $\parallel$ GH

Perpendicular lines

When two lines intersect at right angles, they form perpendicular lines as shown on the diagram along side.

This is written as $AB \perp CD$, which means line AB is perpendicular to line CD.

1. Draw ray TJ
2. Did you draw the whole ray? Explain
3. Do the following lines ever meet? Are they parallel lines? Explain.

(a)

(b)

(c)

4. Match column A with Column B

Column A	Column B
(a) Line Segment	i.
(b) Perpendicular line	ii.
(c) Parallel lines	iii.

Angles on a straight line

The sum of the angles on a straight line add up to 180°

This is a straight angle. A straight angle measures 180° .

5. Study the given diagrams and answer questions.

(a) Calculate the size of $\angle SQR$ if $\angle PQR$ is equal to 42°

(b) Calculate the size of $\angle NLM$ if $\angle KLN$ is equal to 117°

Intersecting lines

Two or more lines which share a common point are called intersecting lines. The common point is called the point of intersection. Three lines share one common point no matter at what angle they meet. Line AC meet line BD at point B, therefore, B is called a point of intersection.

$\angle DBA$ is a right angle and it is equal to 90° . $\angle DBA$ lies next to $\angle DBC$ on a straight line AC. We therefore say $\angle DBA$ is adjacent to $\angle DBC$ and they add up to 180° . When angles add up to 180° we say they are supplementary.

$\angle DBA + \angle DBC = 180^\circ$ (Adjacent angles on a straight line AC)

$$\begin{aligned} \angle SUT &= 90^\circ \quad \angle TUV = 180^\circ \\ \angle SUT &= 180^\circ - 90^\circ \\ \angle SUT &= 90^\circ \end{aligned}$$

6. For the following diagrams, use a protractor to measure all the four angles in each diagram

Figure 1	Figure 2
$\angle SUT = \underline{\hspace{2cm}}^\circ$ $\angle TUV = \underline{\hspace{2cm}}^\circ$ $\angle VUQ = \underline{\hspace{2cm}}^\circ$ $\angle QUS = \underline{\hspace{2cm}}^\circ$	$\angle ABC = \underline{\hspace{2cm}}^\circ$ $\angle CBD = \underline{\hspace{2cm}}^\circ$ $\angle DBE = \underline{\hspace{2cm}}^\circ$ $\angle EBA = \underline{\hspace{2cm}}^\circ$
$\angle SUT = \angle VUQ$ $\angle TUV = \angle QUS$	$\angle ABC = \angle DBE$ $\angle CBD = \angle EBA$
When two lines intersect, the _____ angles are equal. We call them vertically opposite angles	

7. Measure the angles in each diagram below and fill in the measurements in the following table.

Non parallel lines cut by a transversal	Parallel lines cut by a transversal
---	-------------------------------------

Angles	When two lines are not parallel	When two lines are parallel
Corresponding angles	$\rho \text{ --- } ^\circ$ $\mu \text{ --- } ^\circ$	$\omega \text{ --- } \vdots$ $\rho \text{ --- } ^\circ$
	$\tau \text{ --- } \vdots$ $\psi \text{ --- } ^\circ$	$\rho \text{ --- } \vdots$ $\rho \text{ --- } ^\circ$
	$\varsigma \text{ --- } \vdots$ $\phi \text{ --- } ^\circ$	$\rho \text{ --- } \vdots$ $\rho \text{ --- } ^\circ$
	$\sigma \text{ --- } \vdots$ $\chi \text{ --- } ^\circ$	$\rho \text{ --- } \vdots$ $\rho \text{ --- } ^\circ$
Alternate angles	$\tau \text{ --- } \vdots$ $\phi \text{ --- } ^\circ$	$\rho \text{ --- } \vdots$ $\rho \text{ --- } ^\circ$
	$\sigma \text{ --- } \vdots$ $\psi \text{ --- } ^\circ$	$\rho \text{ --- } \vdots$ $\rho \text{ --- } ^\circ$
Co-interior angles	$\tau \text{ --- } \cup \text{ --- } ^\circ$	$\rho \text{ --- } \varsigma \text{ --- } \rho \text{ --- } \sigma \text{ --- } ^\circ$
	$\sigma \text{ --- } \phi \text{ --- } ^\circ$	$\rho \text{ --- } \rho \text{ --- } \rho \text{ --- } \tau \text{ --- } ^\circ$

8. Complete:

When two parallel lines are cut by a transversal, corresponding angles are _____ and alternate angles are _____ and the co-interior angles are _____.

9. Given the following diagram with AB parallel to CD.

- (a) Name a pair of corresponding angles
- (b) A pair of alternate angles
- (c) A pair of Co-interior angles

UNIT 4

GEOMETRY OF 2-D SHAPES

A triangle with three equal sides is an **equilateral triangle**.

A triangle with two equal sides is an **isosceles triangle**.

A triangle with a right angle is called the **right-angled triangle**. The side opposite to the right angle is the **hypotenuse**.

1. Study the following triangles and follow instructions.

(a) Measure the sides of each triangle below

- i. Write what you notice about lengths of their sides.
- ii. Give the special name for the triangles.

(b) Measure the sides of each triangle below and

- i. Write what you do notice about lengths of their sides
- ii. Give the special name for the triangles

(c) Measure the angles of each of the following triangles

- i. What is common about the sizes of these angles
- ii. Measure the sides of each triangle
- iii. Identify the longest side and what do you notice about the position of the longest side
- iv. Give the special name for the triangles

2. Match the triangle in column A with the name in column B

Column A	Column B
	Right angled triangle
	Equilateral triangle

3. What do these triangular road signs mean? Draw the other two you can think of.

4. Study the picture of the Nelson Mandela bridge in Johannesburg. Identify parallel lines, perpendicular lines and line segments and label them on the diagram.

UNIT 1

GEOMETRY OF 2-D SHAPES

1.1 Revision

2. Use the following triangles to answer the questions below:

- (a) Which triangle has only two sides that are equal? What is this type of triangle called?
- (b) If triangle XYZ is an isosceles triangle with the perimeter of 16 cm. If $XY = YZ = 4$ cm, calculate XZ.
- (c) Which triangle has all three sides equal? What is this type of a triangle called?
- (d) If triangle MNO is an equilateral triangle with angle MNO equals to 60° , what is the sum of angles NOM and OMN?

- (e) Which triangle has an angle that is equal to 90° ? What is this type of a triangle called?
- (f) If triangle ABC is a right-angled triangle with $AB \perp BC$, calculate angle BCA.

1.2 Sort and classify shapes according to their properties.

1. Study the following shapes

- (a) List the letters shapes that are quadrilaterals.
- (b) Identify and write the letters of the quadrilaterals that are squares, rectangles and parallelograms in the shapes above.
- (c) Write the letters of quadrilaterals that have:
- Two pairs of opposite sides that are parallel
 - Perpendicular sides
 - All four angles are right angles

1.3 Identifying quadrilaterals in terms of their sides and angles.

Quadrilateral is a polygon with four sides. Quadrilaterals can be classified according to the lengths of their sides, the number of parallel sides, perpendicular sides and the sizes of their angles. In this section you will be introduced to the rhombus, trapezium and the kite.

A rhombus is a quadrilateral with all four sides equal and the pairs of opposite sides parallel	
--	---

	A trapezium is a quadrilateral with only one pair of opposite sides parallel
A kite is a quadrilateral with two pairs of adjacent sides equal and opposite angles between the unequal sides equal	

1. Sort the following shapes according to their properties. Write letters for each

Group

(a) Group 1: All four sides are equal

(b) Group 2: Opposite sides are equal

(c) Group 3: One pair of adjacent sides are equal

(d) Group 4: Perpendicular sides

(e) Group 5: All four angles are right angles

(f) Group 6: Two pairs of opposite sides parallel

(g) Group 7: One pair of opposite sides parallel

2. Match the shape in column A with the names in Column B

Column A						
Column B	Kite	Trapezium	Rhombus	Square	Rectangle	Parallelogram

3. Given the quadrilateral LMNO, angle LMN = 40° , NO = 32mm, LO // MN, NO // ML

- (a) Name the quadrilateral
- (b) Write down the size of angle LNO
- (c) What is the length of side LM?

4. Given the quadrilateral below with angle MQP = 83°

- (a) What is the measurement of angle MNP?
- (b) Write the name of the quadrilateral

5. Study the following quadrilateral and answer the questions below.

- (a) What is the sum of the interior angles?
- (b) Give the name of the quadrilateral.

6. The quadrilateral ABCD has AB = 3cm:

- (a) What will be the length of side BC?
- (b) Name the quadrilateral
- (c) What is the relationship between side AB and BC?
- (d) What is the size of angle AEB?
- (e) What is the relationship between angle AEB and angle BEC?

7. Complete the table by filling in 'yes' or 'no' in the appropriate boxes.

Quadrilaterals	Equal side lengths			Parallel sides		Angles
	All four	Opposite only	Adjacent only	One pair	Two pair	All 90°
						
						
						
						
						
						

8. Study the pictures below and give the name of a quadrilaterals that were used to make the outlines.

(a)	(b)	(c)	(d)	(e)
-----	-----	-----	-----	-----

1.4 Describing and naming parts of a circle.

A circle has different parts and the names are:

The **centre** of the circle is the point exactly in the middle of the circle.

The **circumference** is the outline or border around the outside of the circle

The **radius** of a circle is the distance from the centre of the circle to any point on the circumference

The **diameter** of a circle is the distance from one side of the circumference, through the centre of the circle to the other side. It cuts the circle in half. The diameter is twice the length of the radius

A **chord** is a line that joins any two points on a circumference of the circle.

A **segment** is a section of the circle created by a chord. The curved outside edge of the segment is an arc.

A **sector** is a section of the circle created by two radii. The curved outside edge of the sector is an arc.

1. Name the parts of the circle in the letters below:

2. Lerato is having a birthday party. She cuts her circular cake with a knife. First she cuts it exactly in half and she cuts it into slices for her guests.

- (a) What is the name of the line cutting the circular cake in half?
(b) Name the part of the circle represented by one slice of a cake.
(c) What do you call the outline the cake?

UNIT 2

TRANSFORMATIONS

2.1 Recognize, describe and perform translations, reflections and rotations with geometric figures and shapes.

1. Identify and describe the type of transformation performed on the diagram below.

(a)	(b)	(c)
-----	-----	-----

2.2 Enlargements and reductions

Enlarging a figure means that we make it bigger in a specific way. **Reducing** a figure means that we make it smaller in a specific way. Enlarging or reducing figures is also called **resizing**.

1. Study the following triangles and answer the questions that follow

- (a) How many times is:

FG longer than BC?

JK shorter than BC?

EF longer than AB?

IJ shorter than AB?

EG longer than AC?

IK shorter than AC?

- (b) Is $\triangle EFG$ an enlargement of $\triangle ABC$? Explain your answer.

- (c) Is $\triangle IJK$ a reduction of $\triangle ABC$? Explain your answer.

2. Study the following squares and use them to answer questions.

(a) Complete the following table.

Square B	Square R	Square G
Length _____	Length _____	Length _____
Width _____	Width _____	Width _____

(b) The length of square B is _____ times the length of square R.
 The width of the square R is _____ times the width of square B.
 Square R is enlarged _____ times.

(c) The length of square G is _____ times the length of square R.
 The width of square G is _____ times the width of square R.
 Square G is enlarged _____ times.

(d) The length of square G is _____ times the length of square B.
 The width of the square G is _____ times the width of square B.
 Square B is reduced _____ times.

When the lengths of **all the sides** of a figure are **multiplied by the same number** to produce a second figure, the second figure is an **enlargement** or **reduction** of the first figure. The number by which the sides are multiplied to produce an enlargement or reduction is called the **scale factor**.

The scale factor

- When the scale factor is 1, the image is the same size as the original.

- When the scale factor is less than 1, the image is a reduced. For example, if the scale factor is $\frac{1}{2}$ or 0,5, each side of the image is half the length of its corresponding side in the original figure.
- When the scale factor is greater than 1, the image is enlarged. For example, if the scale factor is 2, each side of the image is double the length of its corresponding side in the original figure.

3. State whether the following scale factors will produce a larger or smaller image:

- (a) 6
- (b) 0,75
- (c) 4,3
- (d) $\frac{1}{9}$

4. On a grid paper, enlarge the triangle and square with a scale factor of 2

2.3 Describe patterns

1. Describe how the following fabric patterns have been developed.

(a)	(b)	(c)	(d)
-----	-----	-----	-----

<https://www.google.com/imgres?imgurl=https%3A%2F%2Fmedia.istockphoto.com%2Fvectors%2Fhand-drawn-doodle-african-national-hut-ndebele-tribal-dwelling-simple-vector-id1334815709%3Fk%3D20%26m%3D1334815709%26s%3D612x612%26w%3D0%26h%3D1petu16xtl3clHBtuICSNEHQa-7hNiu2y2fSL8ZoWdM%3D&imgrefurl=https%3A%2F%2Fwww.istockphoto.com%2Fillustrations%2Fndebele&tbnid=85NJt3vkWgeaxM&vet=12ahUKEwif3Q00f4d4h1Y11IKHa6WCrMOMvnnen11ARCh&id=611nxGt4IF7viM&w=612&h=612&n=ndebele%20tribe%20house%20patterns&v>

UNIT 3

GEOMETRY OF 3-D OBJECTS

3.1 Revision

You will need to use three-dimensional (3D) empty containers for these activities.

1. Name each of the objects and identify faces, vertices and edges where applicable.
2. Name the 3D object and label it using the words face; vertex and edge.

3.2 Building 3-D models using nets

In mathematics, a **net** is a flat pattern that can be folded to form a 3D object. Different 3D objects have different nets. Sometimes the same 3D object can have different nets.

Learners work in groups to do the following activities.

1. Use the containers brought to class to do the following:
 - (a) Cut out the 3D object containers and flatten them
 - (b) Identify the shape of each face or surface.
 - (c) Draw the net of each objects.
2. Make geometric objects using the nets provided. You will need some sticky tape and a pair of scissors. Examples of nets have been provided but more nets can be added. Nets of real life objects can be brought to class for folding.

3. Sort the geometric objects built in (2) using the nets. Explain how each group is formed.
4. Study the following nets and say if each of them will form closed geometric objects. Name the object that can be made.

3.3 Describe, sort and compare polyhedra

There are two main groups of objects with three dimensions (length, width and height), namely those with curved surfaces and those with flat surfaces. Spheres (balls), cylinders and cones are examples of objects with curved surfaces. Objects with only flat surfaces are called **polyhedra**.

A **polyhedron** is a three-dimensional object made of flat surfaces only. It has no curved surfaces. It consists of faces, edges and vertices.

1. Which of the following objects are polyhedra?

Prisms and **pyramids** are two special groups of polyhedra.

Prisms

A prism is a polyhedron with two faces that are congruent and parallel polygons. These faces are called bases and they are connected by lateral faces that are parallelograms. Prisms are named using their base. The two opposite congruent faces are the base.

Example: Triangular prism

Pyramids

A pyramid has only one base. The lateral faces of a pyramid are always triangles. These triangles meet at the same vertex at the top. This vertex is called the **apex** of the pyramid. Pyramids are named using their base. The base is not always the face it is sitting on.

Example: Square-based pyramid

2. Copy and complete the following table.

Object	Pyramid or prism	Shapes that makes up the faces	Number of faces	Number of vertices	Number of edges
					
					
					
					
					
					
					

3. Study the following 3D objects.

- (a) Sort the 3D objects below into the three groups, namely prisms, pyramids and cylinders. Write down the correct letter under each group.
- (b) Separate the prisms into three groups (cubes, rectangular prisms and triangular prisms). Write the letter under each group.

UNIT 4

AREA AND PERIMETER

4.1 Calculate the perimeter of regular and irregular polygons

Perimeter of polygons is the total distance around the shape.

Regular polygons

Regular polygons have all the sides and angles equal. The perimeter of regular polygons is found by adding all the sides of a regular polygon or multiplying one side of the regular polygon by the number of its sides.

A square is an example of a regular polygon. Its perimeter is found by multiplying the length of one side by 4 as shown in the example.

Perimeter of a square $4 \times \text{length of its side (4s)}$
 $4 \times 20 \text{ mm}$
 80 mm

Irregular polygons

Irregular polygons have unequal sides. The perimeter of irregular polygons is found by adding all the sides of the irregular polygon as shown in the example.

Perimeter = sum of all the lengths
 $= 5 \text{ cm} + 3 \text{ cm} + 3 \text{ cm} + 5 \text{ cm} + 4 \text{ cm}$
 $= 20 \text{ cm}$

Conversions:

To convert	Do this	To convert	Do this
cm to mm	10	mm to cm	10
m to cm	100	cm to m	100
km to m	1000	m to km	1000

1. Calculate the perimeter of the following polygons. Leave your answer in centimetres.

4.2 Use appropriate formulae to calculate the perimeter of squares and rectangles

Perimeter is the total length around a shape. To find perimeter of a shape, you add together the lengths of all its sides or edges. To calculate the perimeter of a square, we add all the sides of a square. The formula to calculate the perimeter of a square is $P = 4s$ (where s represents side).

$$\begin{aligned} \text{Perimeter} &= 4s \\ &= 4 (4 \text{ cm}) \\ &= 16 \text{ cm} \end{aligned}$$

The formula to calculate the perimeter of a rectangle is $P = 2a + 2b$ or $P = 2(a + b)$. In the rectangle below, if the side of one block is 1cm, then the perimeter of the figure will be:

$$\begin{aligned} P &= 2a + 2b \\ &= 2(4 \text{ cm} + 3 \text{ cm}) \\ &= 14 \text{ cm} \end{aligned}$$

1. Calculate the perimeter of the following quadrilaterals with the given lengths and breadths

(e) If the perimeter of the square is 32 cm. What is the length of each side?

4.3 Use appropriate formulae to calculate the perimeter of triangles and circles

Perimeter of a triangle

To calculate the perimeter of a **triangle**, we add all the sides of a triangle. The formula to calculate perimeter of a triangle is $P = s + s + s$

$$\begin{aligned}\text{Perimeter} &= s + s + s \\ &= 50 \text{ mm} + 50 \text{ mm} + 50 \text{ mm} \\ &= 150 \text{ mm}\end{aligned}$$

1. Calculate the perimeter of the following triangles given the lengths of the sides.

Perimeter of a circle

To find the perimeter of a circle, we take the whole distance around the circle. The formula to calculate the perimeter of a circle is $P = 2\pi r$ (**Perimeter of a circle is called the circumference**)

$$\begin{aligned}
 P &= 2 \pi r \\
 &= 2 \times 3.14 \times 3 \text{ cm} \\
 &= 37.68 \text{ cm}
 \end{aligned}$$

2. Calculate the perimeter of the following circles.

(a)

(b)

(c) What is the perimeter of the circle with radius 14.5 cm?

(d) What is the circumference of a pizza if one straight side of each slice equals 3.9 cm?

4.4 Use appropriate formulae to calculate the area of squares and rectangles

Area of the square is calculated by the formula: $\text{Area} = \text{length} \times \text{length}$

$$\begin{aligned}
 &= 10 \text{ mm} \times 10 \text{ mm} \\
 &= 100 \text{ mm}^2
 \end{aligned}$$

Formula to calculate the area of a rectangle is $\text{Area} = \text{length} \times \text{breadth}$

$$\begin{aligned}
 &= 14 \text{ cm} \times 2 \text{ cm} \\
 &= 28 \text{ cm}^2
 \end{aligned}$$

1. Calculate the area of the following rectangles and squares

(a) Given the area of a square 49 m^2 calculate its length.

(b) Calculate the breadth of a rectangular table if the length is 2 m and the Area is 32 m.

4.5 Use appropriate formulae to calculate the area of triangles and circles

The formula to calculate **area of a triangle** is $= \frac{1}{2} \times \text{base} \times \text{height}$ (where b represents the base and h the height). The height is a line segment drawn from the vertex perpendicular to the base.

AD = height
BC = base

BD = height
AC = base

DC = height
AB = base

Example: Calculate the area of the triangle below.

$$= \frac{1}{2} \times \text{base} \times \text{height}$$

$$= \frac{1}{2} \times 4 \times 2.5$$

$$= 5$$

1. Copy the following triangles and draw any height in each. Label the base (b) and height (h) of each triangle

2. Calculate area of the following triangles given the lengths and breadth.

(a)

(b)

- (a) Calculate the area of a triangle with base 3,2 cm and height 9,1 cm. Round your answer to one decimal place.
- (b) If the area of a triangle QRS is given as 47,88 cm² and height 6,2 cm; calculate its base. Round off your answer to one decimal place.

The formula to calculate the area of circles is $A = \pi r^2$ (where r is the radius of the circle and $\pi = 3,14$). The radius of the circle below is 3cm. The area of the circle is:

	$ \begin{aligned} A &= \pi r^2 \\ &= 3,14 (3 \text{ cm})^2 \\ &= 3,14 \times 9 \text{ cm}^2 \\ &= 28,26 \text{ cm}^2 \end{aligned} $
--	---

The formula to calculate area of a circle with a given diameter is $A = \frac{\pi d^2}{4}$

NB: Diameter of a circle is double its radius.

Example: Calculate the area of the following circle.

$$A = \frac{\pi d^2}{4}$$

$$A = \frac{\pi (12)^2}{4}$$

$$A = \frac{\pi \times 144}{4}$$

$$A = \frac{\pi \times 144}{4}$$

1. Calculate the area for the following circles if:

- (a) Radius is 2.8 cm
- (b) Radius is 4 cm
- (c) Radius is 10.1 cm
- (d) Diameter is 16 cm
- (e) Diameter is 140 cm

4.6 Problem solving involving perimeter and area of polygons

1. Thabo wants to build a 6 m by 5 m kraal for his cattle. Calculate the perimeter of the kraal to be built and the Area of the land to be used for the kraal.

2. The youth of a village is requesting for a soccer pitch from the community. They require a pitch with a length of 105 m and a width of 68 m. Assist the youth by calculating perimeter and area they will use for the pitch.

3. Nosipho plants a vegetable patch measuring $12\text{ m} \times 8\text{ m}$. What is the area of the vegetable patch? She plants carrots on half of the patch, and tomatoes and potatoes on a quarter of the patch each. Calculate the area covered by each type of vegetable?
4. Mr Mchunu must tile a classroom floor measuring $4\text{ m} \times 4\text{ m}$. The blue tiles he uses each measures $20\text{ cm} \times 20\text{ cm}$. How many tiles does Mr Mchunu need? The tiles are sold in boxes containing 20 tiles each. How many boxes should he buy?

5. Lerato wants to bake a cake with diameter 25 cm for her birthday. Calculate the area and perimeter of this cake.

6. Palesa ordered a 78.5 cm^2 cookie cake for her birthday. She requested the icing to have a sun covering the centre and to be 5 cm in diameter. How much of Palesa's cookie cake wasn't covered by icing?
7. A fence was built around this community. Answer the questions and write your answers in kilometres and then metres.

- (a) How long is the fence?
- (b) Calculate the area of this residence.

FORMULA SHEET

Perimeter of a square	$P = 4s$
Perimeter of a rectangle	$P = 2l + 2w$
Perimeter of a triangle	$P = s + s + s$
Circumference of a circle	$C = 2\pi r$
Area of a square	$A = s^2$
Area of a rectangle	$A = lw$
Area of a triangle	$A = \frac{1}{2}bh$
Area of a circle	$A = \pi r^2$

UNIT 5

SURFACE AREA AND VOLUME

5.1 Using appropriate formulae to calculate the surface area of prisms and cylinders

The surface area of a prism is the sum of the areas of its faces. The formula for calculating the area of a two-dimensional shape is length $\times$ breadth. The unit for area is units².

Recognising and naming prisms

1. Match the picture of prisms with the correct names.

Drawing of the object				
Name of the object	Cylinder	Triangular prism	Cylinder	Rectangular prism

Calculating the total surface area of a cube

A cube is a special prism with 6 congruent faces (equal in all respects). The area of the face of a cube is s^2 , therefore the total surface area of a cube is $6s^2$. The following example illustrates a picture of a cube and its net and shows how the surface area of a cube is calculated.

	 A₁ stands for area of face 1	The cube has 6 faces with side length 5 cm Total Surface Area $= 6 (5 \text{ cm} \times 5 \text{ cm})$ $= 6 \times 25 \text{ cm}^2$ $= 150 \text{ cm}^2$
---	--	--

2. Calculate the surface area of the cubes in (a – d) below, then convert the answers as required.

No.	Diagram of an object	Total Surface Area	Answer in mm ²	Answer in cm ²	Answer in m ²
(a)	 3 cm				
(b)	 19 mm				
(c)	 5,3 m				
(d)	 2,35 m				

Calculating the total surface area of a rectangular prism

A rectangular prism has 6 rectangular faces. Opposite faces of a prism are congruent i.e. they are equal in all respects.

If A_1, A_2, B_1, B_2, C_1 and C_2 are faces of a rectangular prism and $A_1 = A_2, B_1 = B_2$ and $C_1 = C_2$, then the total surface area = 2 area of A_1 + area of B_1 + area of C_2 .

The following example shows a diagram of a rectangular prism and its nets and illustrate how the total surface area of a rectangular prism is calculated.

Area of rectangle A ₁	Area of rectangle B ₁	Area of rectangle C ₁
2 (4 cm 2,5 cm)	2 (4 cm 3 cm)	2 (2,5 cm 3 cm)
2 (10 cm)	2 (12 cm)	2 (7,5 cm)
20 cm ²	24 cm ²	15 cm ²
Total Surface Area 20 cm ² 24 cm ² 15 cm ² 59 cm ²		

3. Calculate the surface area of the following rectangular prisms with the following dimensions:

- (a) Height = 2,4 cm ; Length = 5 cm ; Width = 3,1 cm
- (b) Width = 2,2 mm ; Length = 7 mm ; Height = 1,5 mm
- (c) Width = 4,5 m ; Length = 6 m ; Height = 3,7 m
- (d) Width = 1,8 cm ; Length = 4 cm ; Height = 2,3 cm

Calculating the surface area of a triangular prism

A triangular prism has 3 rectangular faces and 2 triangular faces. In a regular triangular prism, the pair of triangular faces are congruent and the three rectangular faces are congruent.

The surface area of a triangular prism can be calculated as follows: 2 (area of a triangular face) (area of the three rectangular faces)

The example below illustrates a picture of a triangular prism and its net and shows how the surface area of a triangular prism is calculated. The perpendicular height of the triangular face is 3 cm.

$$\begin{aligned}
 \text{SA} &= 2 (\text{area of triangle}) + (\text{area of the three rectangles}) \\
 \text{SA} &= 2 \left(\frac{1}{2} (8 \text{ cm} \times 3 \text{ cm}) \right) + [(8 \text{ cm} \times 12 \text{ cm}) + 2 (5 \text{ cm} \times 12 \text{ cm})] \\
 &= 24 \text{ cm}^2 + 96 \text{ cm}^2 + 2 (60 \text{ cm}^2 + 60 \text{ cm}^2) \\
 &= 240 \text{ cm}^2
 \end{aligned}$$

4. Calculate total surface area of triangular prisms with the following dimensions:

- (a) height of 5cm; base of 24 cm and H = 13 cm
- (b) height of 8 cm; base of 30 mm and H = 17 mm
- (c) height of 6 cm; base of 16 cm and H = 10 cm

Calculating the surface area of a cylinder

A **cylinder** is a 3D object with two congruent circular bases. The area of the circular base is πr^2 and the area of the circumference of the circular base is $2\pi r$, therefore the total surface area = $2\pi r^2 + 2\pi rh$.

The example below illustrates a picture of a cylinder and its net and shows how the surface area of a cylinder is calculated. The height of a cylinder = 25 cm and the radius = 10 cm.

		$2\pi r^2 + 2\pi rh$ $2(3,14)(10)^2 + 2(3,14)(10)(25)$ $628 + 1570$ 2198 cm^2
--	--	---

5. The closed cylinder has a base with the diameter of 14 cm and the height of 16 cm.

- (a) Calculate the area of the circular surface.
- (b) Calculate the total surface area.

6. Study the cylinder below and calculate:

- (a) the surface area, of the circular faces.
- (b) The total surface area of the cylinder.
- (c) the new surface area of the cylinder if the height dimension is doubled.

5.2 Use appropriate formulae to calculate volume of 3-D objects (cube, rectangular and, triangular prism)

Volume and Capacity of 3-D objects.

A prism is a 3-dimensional figure that has two parallel, congruent bases connected by lateral faces. The lateral faces of a prism are **always parallelograms and are usually rectangles**.

The figures below show that the base area of a prism does not change, even if the object is moved between the lateral faces.

The **volume** of an object is the amount of space it takes up. The formula for calculating volume is $\text{area of base} \times \text{height}$. Volume is measured in cubic units e.g. cubic centimetres (cm^3) and cubic metres (m^3). If volume is measured in cubic centimetres (cm^3) the measure of capacity is millilitres.

Volume is the amount of space an object takes up and **capacity** is how much a container can hold.

Calculating volume for prisms

Name	Diagram	Calculation
Rectangular prism		$\text{Volume} = \text{length} \times \text{width} \times \text{height}$ $12 \text{ cm} \times 8 \text{ cm} \times 5 \text{ cm}$ 480 cm^3
Triangular prism		$\text{Volume} = \frac{1}{2} \times \text{base} \times \text{height} \times \text{length}$ $\frac{1}{2} \times 4 \text{ cm} \times 2 \text{ cm} \times 4 \text{ cm}$ 16 cm^3

Cube		Volume = $s \times s \times s$ $15 \text{ cm} \times 15 \text{ cm} \times 15 \text{ cm}$ $3\,375 \text{ cm}^3$
-------------	---	--

1. Calculate the volume of the cube

2. Which of the cubes given below has a bigger volume? Explain.

- (a) A cube with a volume of 1m^3
 (b) A cube with a volume of $1\,000\,000 \text{ cm}^3$

3. The triangular prism is to be dunked in water.

- (a) Calculate the volume of a triangular pyramid.
 (b) How much water in cubic centimeters would be displaced by the prism?

4. Sandi has a fish tank that is 12 cm long, 5 cm high and 2 cm wide. The bottom of the tank is filled with marbles and the tank is full to its capacity. When the marbles are removed the water level drops to a height of 3 cm

- (a) Calculate the volume displaced by the marbles.
 (b) The volume of the water when the marbles are removed.
 (c) What is the difference between the volume displaced by the marbles and the volume after the marbles have been removed?
5. A textbook in shape of a cube has a volume of $638,25 \text{ l}$. What is the maximum number of textbooks that can fit into a box that has a capacity of $2,5 \text{ l}$? Round to the nearest whole number.

5.3 Use appropriate formulae to calculate volume of cylinders

To calculate the volume of a cylinder, multiply the area of the base by the height of the cylinder. The base of a cylinder is circular, therefore:

$$\text{Volume of a cylinder} = \text{Area of base} \times h = \pi r^2 \times h$$

π is an irrational number and does not have an exact value. In general, the **value of π** is considered as 3,14 or $\frac{22}{7}$ for various mathematical calculations.

Name	Diagram	Calculation
Cylinder		Volume of a cylinder Area of base $\times h$ $\pi r^2 \times h$ $3,14 \times 9 \times 12$ $339,12 \text{ cm}^3$

1. Calculate the volume of the object in the following figure. Use a calculator and round off all answers to two decimal places.

2. A liquid is poured from a bottle into a cubic glass tank with the side measurements of 20 cm by 20 cm by 20 cm.

- (a) What is the volume of the liquid when it is in the bottle?
- (b) What is the capacity of the bottle?
- (c) What is the volume of the liquid after it is poured into the tank?
- (d) What is the capacity of the tank?

(e) How high does the liquid go in the tank?

5.4 Problem solving involving surface area and volume.

Case study 1

A church congregation decided to build a hall with four walls that have four rectangular windows, two circular windows and one door. You are responsible for coordinating the project of painting the walls of the hall.

The height of the door is 2,2 m and its area is 2,86m²

Advise them on the amount of paint needed. Use the questions below.

- There are four rectangular windows and one door at the front and no windows on the back and the left walls.
 - Calculate the width of the door in metres, if the area is 2,86 m² including the frames using the formula for the area of a rectangle: $\text{Area} = \text{Length} \times \text{Breadth}$ or $\text{Height} \times \text{Breadth}$
 - Calculate the area of the back wall with a width/breadth and a height of 24 m and 2,8 m, using the formula of a rectangle: $A = B \times H$.
 - Calculate the area of the left wall with a width and a height of 8 m and 3 m using the formula: $A = L \times B$
- The height of the rectangular window is 1,2 m, the width is 0,45 m and the length is 800 cm including frames.
 - Calculate the area of each rectangular window
 - Write the answer in centimetres
 - Calculate the total area of the four rectangular windows.
- The left wall has two circular windows, each with a radius of 1,25 m
 - Calculate the area of one window using the formula for the area of a circle:

- (b) Calculate the total area of the two circular windows.
4. A decision has been taken to start with the outside of the hall.
- (a) Calculate the total surface area (outside walls) that must be painted.
- (b) If a litre of paint covers 6 m^2 , calculate the number of litres of paint that must be bought for the inside and the outside walls.

Case Study 2

The diagram shows the size of a pre-school water tank installed to collect rain water for toilet use. The governing body of the school has decided to repaint the tank to match the walls of the school.

- Calculate the circumference of the tank base with the diameter of 1.6 m using the formula: $C = \pi d$
- If two litres of paint is used to paint the top and bottom how much paint is needed for the outside of the tank?
- If the tank is three quarters full, the volume of water in the tank is 3 750 litres.
 - What is the capacity of the tank?
 - How much water can two tanks of the same size hold?

Case study 3

The diagram shows the size of the triangular gift boxes donated by the local supermarket to the home of the aged every year. Study the picture and answer the questions below.

- How much cardboard will be needed to make one gift box?
- How much cardboard will be needed to make 10 gift boxes?
- If a 15 m by 15 m roll of cardboard is ordered, how many gift boxes can be made?

UNIT 6

DATA HANDLING

Data handling is a term used to describe certain ways of trying to make sense of large collections of observations (data) about things in the real world. Data can be about many different things, for example, people's opinions, success rates of treating people with a certain kind of medicine. We use data to help us make decisions and solve problems about the world around us.

A complete data cycle involves the following:

6.1 Collecting data

Data collection is a systematic process of gathering and measuring information. The method of collecting data will help us to identify the most appropriate tool to be used when collecting the data. There are various sources of data collection.

Once one has a research idea in mind, one can start planning how to collect the data. This requires one to consider:

- questions one has to ask
- where to collect the data
- how to collect the data?
- who to collect the data from [whole population or sample]

Population refers to the whole group you are asking the question
Sample refers to a small number of the group that you think will represent the whole

Here are some research questions.

1. Copy the statements below and use a **P** to show which statement describes the population and an **S** to show which statement describes a sample of the population.

- (a) What percentage of plants in the vegetable patch is affected by disease?

All the plants in the vegetable garden	
Every fourth or fifth plant in the vegetable patch.	

- (b) How often do teenagers recycle plastic?

About 40 teenagers in the community	
Every teenager in South Africa	

- (c) How many hours of sleep do 10-year-olds in my community get per night?

All 10-year-olds in the community	
About ten 10-year-olds in the community	

Questionnaires

A **questionnaire** is a sheet with questions used to collect data from people. Each respondent in the sample completes a questionnaire. The questions on the sheet can be structured differently, for example:

- The questions may require “yes” or “no” answers.
- A selection of answers (multiple-choice answers) may be provided for respondents to choose from.

- The **respondents** may enter their own views or information on the questionnaire. A respondent is a person from whom you collect data

The type of responses you need, for example a simple “yes” or “no” or more detailed information, depends on the data you intend to collect.

Example 1

Do you help with chores at home?

- ☐ Yes ☐ No

Example 2

Which of these chores do you help with?

- ☐ cleaning dishes ☐ washing clothes
☐ sweeping/vacuuming ☐ making beds

Example 3

How old are you?

- ☐ 5–8 years ☐ 9–11 years
☐ 12–15 years ☐ 16–19 years

Note in example 3 how all the ages from 5 to 19 are covered, but without any overlaps.

Example 4

Tick the box if you have:

- | | |
|---|---|
| 1 ☐ Running water inside your home | 6 ☐ A cell phone |
| 2 ☐ Electricity inside your home | 7 ☐ Access to a computer |
| 3 ☐ A radio at home | 8 ☐ Access to the internet |
| 4 ☐ A TV at home | 9 ☐ Access to a library |
| 5 ☐ A telephone at home | |

- You think most people in your school get to school by bus. You want to investigate this by means of a survey. A multiple-choice questionnaire can be used to record your data.

Design a simple questionnaire for your survey, using multiple-choice questions. Your data must also include:

- Grade
- Gender
- Transport use to come to school.

TRANSPORT SURVEY FOR YEAR 3 LEARNERS

We want to determine the most popular means of transport used by learners to school.
Please assist by answering a few questions.

Gender (Tick the correct box)	Female	☐	Male	☐
--------------------------------------	---------------	--------------------------	-------------	--------------------------

Which year are you? (Tick the correct box)

Year 1	Year 2	Year 3	Year 4
☐	☐	☐	☐

Which type of transport do you use mostly to get to school? (Tick the correct box)

Walk	Bicycle	Bus	Car	Other
☐	☐	☐	☐	☐

- Write a suitable question with multiple-choice responses to find out the following information:
 - Gender
 - Age
 - What do teenagers spend their money on?
 - How much time do spend on homework every day?
- Use the multiple-choice question that you developed in Question 2 to collect the data. Keep the results for the next section.

6.2 Organising data

Organizing data is a systematic way of bringing data together in a way that makes it easier to read. Tally marks (I) can be used to record data in different categories as shown in the callout. Tallies are grouped in to five to make it easier to count them quickly.

Tally marks

A count of three = III

A count of five = IIII

A count of seven = IIII II

Example

Litter that is thrown all over the neighborhood troubles a community. Year 4 class learners were asked to find out the type of litter available in their community and identify where the litter was located. The following observation sheet was used by Tshiamo to collect information.

AN OBSERVATION SHEET ON LITTER IN THE COMMUNITY			
NAME: Tshiamo Barnes		CLASS: Year 3 b	
TYPE OF LITTER	WHERE LOCATED	TYPE OF LITTER	WHERE LOCATED
Plastic	Streets	Chips paper	Schools
Sweet wraps	Shops	Bottles	Streets
Chips wraps	Shops	Paper	Playgrounds
Bottles	Playgrounds	Cans	Streets
Cans	Playgrounds	Sweet wraps	Streets
Paper	Shops	Cans	Playgrounds
Paper	Schools	Sweet wraps	Playgrounds
Bottles	Streets	Paper	Schools
Plastic	Shops	Sweet wraps	Playgrounds
Paper	Street	Chips wraps	Playgrounds
Chips wraps	Schools	Sweet wraps	Schools
Chips wraps	Shops	Cans	Playgrounds

1. Use the information provided to construct a tally table for the type of litter identified.
2. Use the information provided to construct a tally table for the location where litter was identified.
3. Copy and complete the combined tally table for the information given. The first five (5) has been filled for you.

Type of litter \ Where found	Street	Shops	Playground	Schools	FREQUENCY
Plastic	I				
Sweets wraps		I			
Chips wraps		I			
Bottles			I		
Cans			I		
Paper					
TOTAL					

4. Add the bottom totals together. What do you get?

5. Add the vertical totals together. What do you get?

Can you see that the two totals are the same? We use the fact that the two totals are the same to check that we have recorded the numbers correctly.

6. Use the completed frequency table to answer the following questions.

- (a) How many items of litter were identified?
- (b) Where was the most litter found?
- (c) Where were the cool drink cans found?
- (d) Where were most sweet papers found?
- (e) Where was the scrap paper found?
- (f) How many cool drink cans were found in the playground?
- (g) Where would be the best place to put an extra rubbish bin? Give a reason for your answer.

Frequency table for large amounts of data.

A frequency table has rows and columns. When the set of data values is spread out, it is difficult to set up a frequency table for every data value as there will be too many rows.

The best way to summarise large amounts of data in a table or graph is to group the possible options together into certain intervals or categories. When analyzing marks, instead of having 100 rows of data of marks out of 100, one may limit it to five (5) rows by grouping scores together like this: scores from 0 Ĩ 20; 21 Ĩ 40; 41 Ĩ 60; 61 Ĩ 80 and 81 Ĩ 100.

Example

Summarise marks obtained by 30 learners in an examination.

Name	Marks	Name	Marks	Name	Marks
Simon	60	Lerato	55	Zola	53
Elise	47	Siyabulela	65	Tshiamo	49
Manana	79	Alicia	45	Edward	91
Laura	64	Betty	30	Tefo	60
Piet	59	Susan	85	Dimakatso	63
Nhlanhla	77	Sibongile	25	John	46

Naledi	51	Jakob	73	Mark	45
Patricia	19	Zollie	47	Sipho	33
Zebon	90	Koos	79	Azwindini	85
Julius	60	Dumisile	16	Penelope	34

Frequency Table

Marks	Tallies	Frequency	From this table it is easy to see that most learners scored between 41% and 60% for the exam. Six learners failed the exam, because they scored between 0% and 40% and four learners got distinctions , because they scored between 81% and 100%
0 – 20	II	2	
21 – 40	IIII	4	
41 – 60	IIII IIII IIII II	13	
61 – 80	IIII II	7	
81 – 100	IIII	4	

1. The number of calls from motorists per day for roadside service was recorded for a month. The results were as follows:

28	70	100	81	122	40	75	217	145
104	130	187	97	120	113	75	86	90
123	80	68	100	90	174	82	120	194
109	140	170	120					

Set up a frequency table for this set of data values, using grouped data, grouped in five groups with intervals of 40.

2. Consider the following data set.

36	57	31	45	78	15	56
88	37	57	3	41	48	42
63	66	18	32	59	77	62
32	60	73	49	82	77	37
39	92	22	42	54	25	97

- Sort the data in increasing (ascending) order.
- Make a frequency table for this data with classes: 0 – 19; 20 – 39; 40 – 59; 60 – 79; and 80 – 99.
- Make another frequency table for this data with classes: 0 – 50 and 51–99.

- (d) Make a frequency table for this data with classes 0 – 4; 5 – 9; 10 – 14; 15 – 19; . . . 85 – 89; 90 – 94 and 94 – 99.
- (e) Discuss the advantages and disadvantages of each of the frequency table.
- (f) What do you learn from each?
- (g) Overall, which one is the most informative? Why?
- (h) Write a short paragraph in which you discuss what your frequency tables reveal.
3. The data shows the mass of 40 students in a class to the nearest kg. Construct a frequency table for the data using appropriate class intervals.

55	60	75	49	52	70	48	64	66	76
57	58	65	62	71	73	54	57	76	61
55	69	71	61	53	59	51	78	63	56
64	63	76	63	67	72	78	62	76	71

- (a) How will we group these numbers into class intervals? What do you suggest? Discuss with others.
- (b) Now look at this method.
- Smallest value _____
- Highest value _____
- Range highest value – smallest value
- _____ – _____ = _____

Range is the difference between the smallest value and the highest value.

- (c) Now we decide that we want five class intervals.

Therefore: 28 30 (rounded off to the next 10)

Now we can construct a table with three columns, and then write the date groups or class intervals in the first column.

INTERVAL	TALLIES	FREQUENCY
TOTAL		40

6.3 Summarising data

Measures of central tendency and measures of spread and dispersion

A measure of central tendency is a single value that attempts to show a central position of a set of data. There are three types of measures of central tendency i.e. mode, median and mean.

Mode

The mode is the data value that appears most often in a set of data. No calculation is needed to find the mode. You just find the value that appears most frequently. If no number appears more than the other numbers, then there is no mode. It is important to arrange data in ascending or descending order in order to easily identify the mode.

Example.

What is the mode in the following data set?

150; 152; 143; 146; 135; 145; 151; 139; 141; 161; 158; 148; 144; 146; 155; 159; 165; 149; 139; 153; 146.

Let us arrange the data from small to biggest.

It is very important to cancel each number you have used when ordering numbers. Three have been cancelled so that numbers are not omitted.

135; 139; 139; 141; 143; 144; 145; **146; 146; 146**; 148; 149; 150; 151; 152; 153; 155; 158; 159; 161; 165

The value that appears the most is 146. Therefore, the mode for this data set is 146.

4. What is the mode of these numbers: 75; 78; 75; 71; 78; 25; 75; 29?

Median

The median is the middle number in the data set. To determine the median, you have to write all the numbers in the data set from the smallest to the highest and the number in the middle will be your median. If there is more than one number in the middle (i.e. if the data contains an even number of data values) add the two numbers in the middle and divide the answer by 2.

Example

What is the median in the following data set?

150; 152; 143; 146; 135; 145; 151; 139; 141; 161; 158; 148; 144; 146; 155; 159; 165; 149; 139; 153; 146.

Let us arrange the data from small to biggest.

Therefore, the median for this data set is 148

5. What is the median of these numbers: 75; 78; 75; 71; 78; 25; 75; 29?

Mean

The mean or the average is the most common measure of central tendency that is used, but it can be easily influenced by high or low numbers in the data set. It is calculated by adding all the values together and dividing by the number of values in the data set.

Example

What is the mean of the following data set?

135; 139; 139; 141; 143; 144; 145; 146; 146; 146; 148; 149; 150; 151; 152; 153; 155; 158; 159; 161; 165

$$\begin{aligned}\text{Mean} &= \frac{135 + 139 + 139 + 141 + 143 + 144 + 145 + 146 + 146 + 146 + 148 + 149 + 150 + 151 + 152 + 153 + 155 + 158 + 159 + 161 + 165}{20} \\ &= \frac{3076}{20} \\ &= 153,8\end{aligned}$$

The mean or average is not always a whole number

Therefore, the mean of this data set is 153,8.

6. What is the mean of these numbers: 18; 12; 10, 10?

Range

The range of a data set is the difference between the highest value and the lowest value. For example, the range of the data 18; 12; 10, 10, 11 is: $18 - 10 = 8$.

The bigger the range, the more the data is spread out. The smaller the range, the more the data is clustered around similar values

7. Five (5) children have heights of 138 cm; 135 cm; 140 cm; 139 cm; and 141 cm. What is the range of their heights?
8. Sipho wrote seven Mathematics tests and got scores of 68, 71, 71, 84, 53, 62 and 67. What is the mean, median and the mode of these scores?
9. Use the following data set to calculate the range, mode, median and the mean.
3; 13; 7; 5; 21; 23; 39; 23; 40; 23; 14; 12; 56; 23; 29
10. The mean of three (3) numbers is 8. Two of the numbers are 11 and 7. What is the third number?
11. The cost of five (5) cakes is R28, R19, R45; R45 and R15. What is the median cost?
12. What is the median of these numbers: 2,4 ; 2,8 ; 2,3 ; 2,9 ; 2,9?

6.4 Representing data

Data can be represented using different types of graphs. They help with displaying and reporting data and make it easier to report patterns and relationships. We will be working with three graphs i.e. bar graphs, double bar graphs and pie charts.

Bar graph

A bar graph usually shows categories (or classes) of data along the horizontal axis, and the frequency of each category along the vertical axis.

A bar graph is a visual display used to compare the frequency of occurrence of different characteristics of data.

This type of display allows us to compare groups of data and make generalisations about the data. Features of bar graphs are shown.

Steps in drawing a bar graph

- Á To draw a bar graph you will have to start with your frequency table.
- Á From the frequency table, decide on the range and scale of the vertical axis and the horizontal axis
- Á Draw the vertical and horizontal axes and label them
- Á Write the title of the graph at the top
- Á Mark the data on the graph for each data group and draw the bar
- Á Add the colour or shading of the bar to the key (legend), if required to show.

Example

1. Use the following frequency table to represent data in a bar graph

Favourite fruit	Tallies	Frequency
Grape fruit	IIII	4
Lemon	II	2
Orange	IIII IIII	9
Banana	IIII IIII IIII II	13
Apple	IIII II	7

Solution:

2. Answer the following questions based on the bar graph.
 - (a) Which fruit do most learners prefer?
 - (b) What is the least favourite fruit?
 - (c) If there are no bananas in the shop, which fruit will, learners most likely buy?

3. The following table shows the sales of cars per month at a second-hand car dealership. Create a bar graph for the data.

Month	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
Cars sold	15	14	13	11	7	8	4	6	10	8	11	16

- (a) During which month were most, cars sold?
- (b) During which month were least cars sold? What could be the possible reason for less sales.
- (c) How many cars were sold in May and June altogether?
- (d) How many cars were sold during the year?

Double bar graph

A double bar graph shows two sets of data for each category (or class). For example, the double bar graph below shows data collected from girls for each category, and data collected from boys for each category

Example

The following frequency table shows the number of men and women that visited the Snake Park. Construct a side-by-side double bar graph to represent the information.

VISITORS TO THE SNAKE PARK

MONTH	JAN	FEB	MAR	APR	MAY	JUNE
MEN	300	150	550	250	100	200
WOMEN	200	170	430	300	250	50

4. The following table represents the expenditure per learner for primary and high schools. Draw a double bar graph.

EXPENDITURE PER LEARNER		
YEAR	PRIMARY SCHOOL	SECONDARY SCHOOL
1985	325	225
1990	361	240
1995	418	274
2000	425	277

Pie chart

A pie chart is a circular graph in which the circle is divided into sectors. Each sector visually represents an item in a data set to match the amount of the item as a percentage or fraction of the total data set. (the whole circle) Pie charts are useful to compare different parts of a whole amount. They are often used in media to show clear and important differences, but they cannot show shape and spread of data

This pie chart shows six categories of data.

Sector

Example

The pie chart below shows a survey of the different types of the favourite fruit juice flavours that are normally bought by a group of 120 learners from Nduku High school during their lunchtime.

The key (or legend) shows the category that each colour represents

Á Calculate how many learners chose each type of juice.

- 45% of 120 learners 54 learners who chose fruit cocktail.
- 30% of 120 36 learners who chose apple.
- 12,5% of 120 learners 15 learners who chose grape.
- 12,5% of 120 15 learners who chose litchi

Á In what way does the pie chart work better than a bar graph to represent this data?

- The pie chart is a simple, visual representation that works well for representing percentages. A pie chart allows us to see at a glance the relative proportions of the learners who prefer each flavour.

Á What information would a bar graph give you that this pie chart does not?

- The number of learners who prefer each flavour.

Study the following.

5. Pauline is the treasurer of the Year 3 class at the Sukazi High School. Her class raised money for activities through various events. The total amount raised was R 1 830. Pauline used a pie graph to show the amount of money each event raised.

(a) Study the graph and answer the following question.

- (b) What percentage of the total money was raised at the flea market?
- (c) How much money was raised at the flea market?
- (d) What percentage of the total money was raised during the dress up day?
- (e) How much money was raised at the dance?
- (f) Which event gave them more money?
- (g) Calculate the difference between the money raised at the cake sale and on shoe polishing.

6.5 Interpreting and reporting data

Data **analysis** and **interpretation** is a process of assigning meaning to the collected information and determining the conclusion, significance and implications of the findings. There are four steps to data interpretation i.e. collect data required; develop findings; develop conclusions and develop recommendations.

How do you interpret data?

There are four steps to data interpretation.

- Á Collect the information you need.
- Á Develop findings
- Á Develop conclusions
- Á Develop recommendations.

Example

Study the following graphs and answer the questions that follow.

(a) What does each of the graphs show?

The graphs show the number of CD's sold by Music Note in Year 1 and Year 2.

(b) How many CDs were sold from July to September of Year 1?

700 CDs were sold.

(c) How many CDs were sold from July to September of Year 2?

375 CDs were sold.

(d) The heights of the bars indicate that Music Note sold more CDs in October to December of Year 2 than in the same months of Year 1. Is this the case?

No, 500 CDs were sold in Oct – Dec in Year 1 and 300 CDs were sold during that period in Year 2. The scales used in the two graphs are not the same so the graph for Year 2 shows some bias.

(e) How many CDs were sold altogether in Year 1?

1 800 CDs were sold in Year 1.

(f) How many CDs were sold altogether in Year 2?

1 075 CDs were sold in Year 2.

(g) Explain why the heights of the bars seem to indicate that Music Note sold more or less the same number of CDs in both years, which is not true.

The scales used for Year 1 and Year 2 graphs are not the same. In Year 1, the scale is 0 – 100 and for Year 2, the scale is 0 – 50.

1. Study the following graphs and answer the questions that follow.

Ise and Moletsu wanted to find out more about the number of hours people spend watching TV on a particular public holiday. Ise did her survey on the public holiday from 13:00 to 15:00. She visited a supermarket and asked adult respondents to complete her questionnaire. Moletsu did his survey on the same day from 17:00 to 19:00. He went from door to door in his neighbourhood and asked the children to complete his questionnaire.

(a) According to Ise's data, how long did most people spend the public holiday?

- (b) According to Moletsi's data, how long did most people stay on the public holiday?
- (c) Write a paragraph to summarise and compare Ilse's data and Moletsi's data.
- (d) How could the time when the data was collected have affected the data?
- (e) How could the place where the data was collected have affected the data?
- (f) How could the people from whom data was collected have affected the data?

1. The following table shows the Mathematics marks of Class A and Class B

Class A	Class B
94, 42, 23, 67, 67, 68, 13, 53, 44, 34, 64, 69, 50, 31, 91, 40, 10, 30, 49, 61	74, 26, 65, 45, 71, 77, 58, 35, 39, 45, 68, 45, 57, 62, 29, 55, 23, 56, 38, 36, 50, 64, 58, 32, 42

- (a) Find the range of each set of data.
- (b) What can you say about the two classes by looking at the range of marks?
- (c) Copy and complete the table by calculating the mean (average) Mathematics mark for each class. You may use your calculator. Class
- | | | |
|-------------|-----------------|------|
| Total marks | Number of marks | Mean |
| Class A | | |
| Class B | | |

Class	Total marks	Number of marks	Mean
Class A			
Class B			

- (d) Compare the two sets of data using the means.
- (e) Copy and complete the table by finding the median for each class. Class
- | | | |
|------------------------------|-----------------|--------|
| Marks from highest to lowest | Middle position | Median |
| Class A | | |
| Class B | | |

Class	Marks from highest to lowest	Middle position	Median
Class A			
Class B			

- (f) Compare the two sets of data using the medians.
- (g) Copy and complete the table by finding the mode for each class. Class
Highest frequency Mode Class A Class B

Class	Highest frequency	Mode
Class A		
Class B		

- (h) Compare the two sets of data using the mode.
- (i) Which of the following do you think best represents each set of data: mean, median or mode? Explain your answer
