LIFE SKILLS OCCUPATION CURRICULUM

Life Skills Occupation deals with the holistic development of the learner throughout childhood. It equips learners with knowledge, skills and values that assist them to achieve their full physical, intellectual, personal, emotional and social potential. The subject encourages learners to acquire and practice life skills that will assist them to become independent and effective in responding to life's challenges and to play an active and responsible role in society. The subject aims to develop learners through four different, but interrelated study areas, that is, Personal and Social Well-being, Physical Education, Creative Arts, and Natural Sciences.

LIFE SKILLS OCCUPATION – PHYSICAL EDUCATION

Physical Education is part of a selection of study areas that make up the Life Skills Learning Programme as specified for the GCE Technical Occupational qualification. It develops learners' physical well-being and knowledge of movement in a safe and developmentally appropriate manner. It encourages learners to use these to perform in a wide range of activities associated with the development of an active and healthy lifestyle. During engagement in this study area, learners will develop motor skills and participate in a variety of physical activities.

OVERVIEW

According to the United Nations, Educational, Scientific and Cultural Organizations (UNESCO) International Charter of Physical Education, Physical Activity and Sport Physical education, physical activity and sport programmes must inspire lifelong participation.

- Physical education, physical activity and sport programmes must be designed to meet the needs and personal characteristics of those practicing them over their whole lifespan.
- Early positive experiences of play, games and physical activities should be prioritized for all so as to lay a foundation of the knowledge, skills, attitudes and motivation necessary for the maintenance of lifelong participation in physical activity and sport.
- As the only area of school curricula concerned with developing students' competence and confidence in sport and physical activity, physical education provides a learning gateway for the skills, attitudes and knowledge necessary for lifelong physical activity and sport; quality and inclusive physical education classes, taught by qualified physical education teachers, should be mandatory in all grades and levels of education.

A Physically Educated Person:

1. Demonstrates competency in many movement forms and proficiency in few movement forms.
2. Applies movement concepts and principles to the learning and development of motor skills
3. Exhibits a physically active lifestyle
4. Achieves and maintains a health-enhancing level of physical fitness
5. Demonstrates understanding and respect for differences among people in physical activity settings
6. Understands that physical activity provides opportunities for enjoyments, challenge, self-expression and social interaction

SPECIFIC AIMS

The subject Life Skills Occupation aims to:

- 1) Guide learners to achieve their full intellectual, physical, personal, emotional and social potential;
- 2) Teach learners to exercise their constitutional rights and responsibilities and to respect the rights of others;
- 3) Guide learners to make informed and responsible decisions about their health and environment;
- 4) Develop creative, expressive and innovative individuals;
- 5) Develop skills such as self-awareness, problem-solving, interpersonal relations, leadership, decision-making, and effective communication; and
- 6) Develop learners' skills to respond to challenges and play an active and responsible role in the economy and society;

ORGANISATION OF THE CURRICULUM

In the Life Skills Occupation curriculum, Physical Education is expressed as a study area containing three topics which are:

- 1) Fitness
- 2) Sport
- 3) Games

The issues dealt with in each topic are related to the issues covered in the other two topics of the subject. Owing to the interrelated nature of the study area, the three topics of Physical Education function interdependently, and therefore, are considered to be of equal importance.

ALLOCATION OF TEACHING TIME

Time for Life Skills Occupation has been allocated in the following way:

- 10 weeks per term, with 1 hour per week;
- Year 1-3 has been designed to be completed within 32 weeks per year
- Year 4 has been designed to be completed within 30 weeks. (30 Hours)
- Year 4: No Physical Education content and activities for term 4
- 8 Hours has been included for assessment per term
- Year 4, Term 3 work will cover 7 weeks plus 1 week for revision and 2 weeks for assessment.

Below is the summary of time allocation per topic. The time allocation provides an indication of the weighting of each topic. However, this is the guideline and should be applied flexibly according to circumstances in the classroom to accommodate the interests of the learners.

Topics	Time Allocation
Fitness	11 weeks (11 hours)
Sport	8 weeks (8 hours)
Games	12 weeks (12 hours)
Formal Assessment	8 weeks (2 hours per term)
Revision	1 Week (1 Hour) Term 4

CAPS: TECHNICAL OCCUPATIONAL LIFE SKILL: PHYSICAL EDUCATION

Activities Overview Year 3

TERM	WEEKS	ACTUAL WEEKS	FITNESS	SPORT	GAMES
1	1-3	3	• Crouch Start and 100m relay	• Cricket: Grip • Tennis: Grip and foot position • Swimming: Breaststroke	• Tennis set: Striking with the hand, • Shotput, • Throwing
	4-5	2	• First Aid and theory: definition, importance and first aid kit/bag • 5 station circuit training	• Cricket: bowling • Tennis: backhand • Swimming: backstroke	• Traditional games: Jukskei, Kho-kho • Water activities and relay
	6-8	3	• First aid theory: minor cuts practical • High jump: Normal	• Cricket: catching a ball • Rhythmic gymnastics • Tennis: backhand • Swimming: Butterfly	Modified Cricket: 6-a-side
	9-10	Assessments			
TERM	WEEKS	ACTUAL WEEKS	FITNESS	SPORT	GAMES
2	1-3	3	• Jogging through the wood	• Hockey: grip and dribble • Soccer; passing • Basketball: dribble • Rugby: passing • Gymnastics: Floor sequences	• Obstacle course • Chase your partner

	4-5	2	• Shuttle relay	• Hockey: short corners • Soccer: trapping • Basketball: passing • Rugby: scrum • Volleyball: passing	• Lateral running • Dot, L, jump box and agility drills
	6-8	3	• Squat jumps • Circuit training	• Hockey: striking a goal • Soccer: goal keeping, • Basketball: shooting • Rugby: punting, • Gymnastics; forward and backward roll	• Obstacle course • Mini soccer-dribbling • Mini Basketball • Mini hockey • Touch rugby • Mini netball • River dance • Follow the leader
	9-10	Assessment			
TERM	WEEKS	ACTUAL WEEKS	FITNESS	SPORT	GAMES
3	1-3	3	• Cone game	• Hockey: goal keeping • Soccer: heading • Basketball: passes • Rugby: scrumming • Rhythmic Gymnastics: hoop and rope	• Shuttle relay • Mini Netball • Mini Hockey • Mini Soccer • Touch rugby • Mini basketball • Volleyball • Softball
	4-5	2	• Interval relay running	• Cricket: Fielding defensive • Tennis: forehand	• Athletics: Sprinting • Field Discuss • Rotation, elevation and

				Swimming: arm action	balance with partner - Simon Says - Mini cricket: fielding - Tennis set - Traditional games: Kho kho, Dibeke
	6-8	3	Full body workout station	- Hockey: grip - Soccer: dribble - Basketball : layup - Rugby: passing - Gymnastics: agility	- Obstacle course - Mini Netball - Ice Cream - Mini Hockey - Mini Soccer - Touch rugby - Mini Basketball - Gymnastics: Thigh stand - Spotter and mounter - Traditional dance: Waltz, Cha-Cha
	9-10	Assessment			
TERM	WEEKS	ACTUAL WEEKS	FITNESS	SPORT	GAMES
4	1-3	3	Crouch start: command, get set and go	- Cricket: batting - Tennis: Ground shots	- Athletic games: running techniques, - Long jump - Mini cricket - Tennis set
	4-5	2	- Long jump - High jump	- Cricket: field placing - Gymnastics; agility - Tennis: serve, follow through, volley - Swimming: front crawl	- Athletics: relay - Water activities that promotes confidence, treasure diving, red light, green light - Mini Cricket - Tennis set

	6-7	2	• Middle distance running • Cross country running	• Cricket: wicket keeping and field placing • Gymnastics: agility, hand/head stand • Tennis: serve and follow through • Volleyball: volleying and digging • Swimming: races • Hockey: grip and dribble • Soccer: dribble and passing • Basketball: layup • Rugby: passing and kicking	• Athletic: Track Sprint and high jump • Water activities: Ring a ring a Rosie, Giant steps and Duck diving • Tennis set
	8	1 week for revision			
	9-10	2 weeks for Assessment			

KEY QUESTIONS:

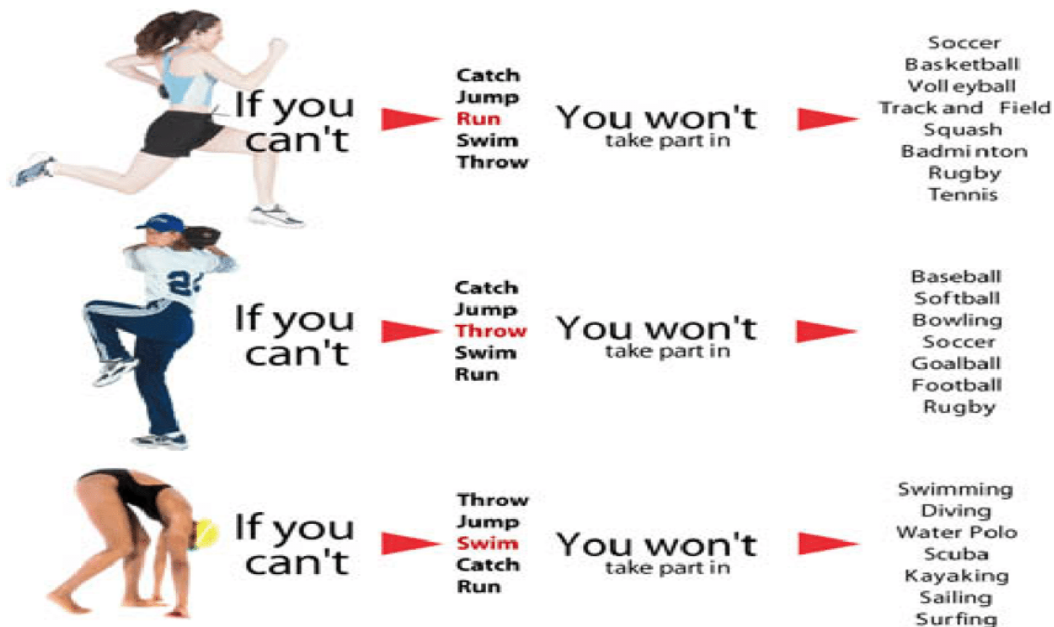

UNIT 1: FITNESS	UNIT 2: GAMES	UNIT 3: SPORT
What is the relationship between fitness, games and sport?		
Physical fitness is a state of well-being with the necessary energy to participate in a variety of physical activities (games and/or sport).		
Games and modified sports offer fun and developmentally appropriate activities that are designed to develop learners' physical fitness and encourage them to participate in the targeted sport , and a wide range of sports in general.		
What are the components of physical fitness?	What are the categories of games?	What are the different types of sport?
Health-related physical fitness components: 1. Cardiovascular endurance; 2. Muscular strength; 3. Muscular endurance; 4. Flexibility; and 5. Body composition.	Target Games in which the learner propels an object, preferably with a high degree of accuracy, at a target. Indigenous Games are recreational activities that originated from a particular cultural group, community or people. These games are different from your mainstream sports, which are regulated by international federations, and have fixed rules	1. Individual sports: Swimming, Athletics 2. Dual sports: Tennis 3. Team sports: Football, Netball, Hockey, Cricket, Rugby 4. Extreme sports: Mountain biking 5. Water-based sports: Water polo, Swimming 6. Land-based sports: Rugby, Football, Netball, Hockey, Cricket, Athletics, Basketball 7. Air-based sports: Skydiving 8. Contact sports: Karate, Boxing

Skill-related physical fitness components: 1. Agility; 2. Balance; 3. Power; 4. Speed; 5. Coordination; and 6. Reaction time.	Net/Wall Games in which the learner propels an object into space/ over a net or a wall so that it lands in an area that an opponent is defending trying to make it difficult for an opponent to return it.	9. Non-contact sports: Athletics, Tennis
What is an example of a non-loco-motor skill? • Stretching What is an example of a loco-motor skill? • Running What is an example of a manipulative skill? Throwing	Striking/Fielding Games in which the learner strikes an object so it is placed away from defenders in the field. Territory/Invasion Games in which learners invade an opponent's territory to score.	Team sports can be classified into these four categories: 1. Invasion Games: Netball 2. Net Games: Volleyball 3. Fielding & Striking Games: Cricket 4. Target Games: Golf

3 R's of skill learning: Repetition, Refinement, and Reflection

To effectively participate in fitness, games and sports activities, the teacher must ensure that all learners have the opportunity to perform, repeat, refine and reflect on each loco-motor, non-loco-motor and manipulative skill introduced to them in its simplest form before combining and applying them in the various settings and in their most complex formats.

Considerations during the Physical Education Lesson:

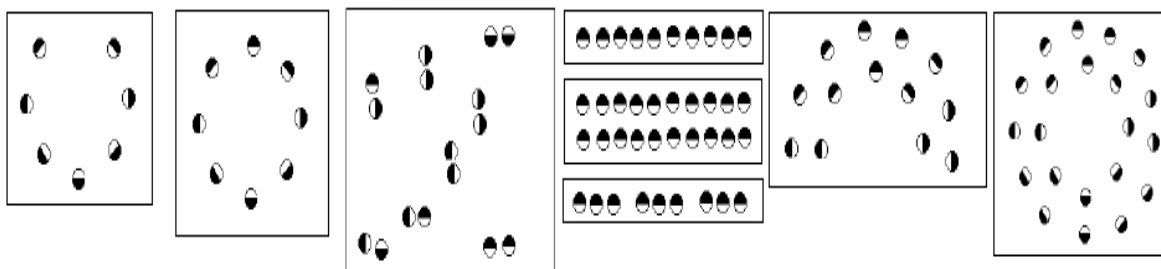

- Each learner must have an active role in the Physical Education lesson at all times. That all learners get to play all positions, accumulate the same number of repetitions, and are placed in an enjoyable learning environment.
- The intensity, duration and load of all physical activities should be age and developmental appropriate for all the learners involved.
- Focus should be on the learner's ability to demonstrate a clear understanding of concepts and techniques involved in all three topics.

Formations

Formations, which include learners being in lines, rows, circles, dispersed, individually, paired, seated etc., constitute an important organisational element in the Physical Education class. Formations in the Physical Education class are about maximising space, utilising activity design, and making use of layouts that will arrange learners in ways that will enhance teaching, learning and participation. The

utilisation of the formations should always correspond with the activities to be realised.

The teacher must be positioned in such a way that he or she is able to see all the learners in the class all the time, irrespective of the formation chosen.

Safety Considerations

Safety (of task/activity, space and equipment) is an essential element of Physical Education and should be introduced and constantly reinforced throughout all lessons. Despite the fact that safety precautions during a Physical Education class cannot remove all risks, they should and may eliminate unnecessary hazards.

In the event of water and gymnastic activities, which have been chosen, safety should be taken into considerations at all times.

Water Safety	Gymnastic safety
	
Precautions: • Check the weather and the tides before you leave home if you are going to swim in the sea. • Only enter where the waves are straight and gentle. If you experience a strong current, get out of the sea, or at least do not go in deep. • Never swim while you are intoxicated.	Support/assistance practical: • Always warm up and stretch before doing gymnastics. • Only practice on padded floors, never on a hard surface. Mats should be placed under the equipment and properly secured, at all times. • Have a coach or program director

• Buddy up! Always <u>swim</u> with a partner • Enter the water feet first as a rule.	who is qualified and is at every practice. Injuries stemming from overuse are common in gymnastics and only put a gymnast at risk for more serious injuries. • Learn how to fall safely. This is one of the first skills a gymnast learns' and it prevents both head and neck injuries. • Some safety tips: Use correct matting ... Never try a new skill without supervision ... Do not run around the gym ... Watch out for other gymnasts ... Listen to the teacher/coach ... Stay off your head ... Stretch before practice, warm-up before stretching ... If something hurts, tell your teacher/coach ... Have fun.
Priorities of water rescue: • Your own personal safety should always be the number 1 priority in any rescue situation. Self-preservation is paramount! • People in difficulty in the water are likely to be in a state of panic, fearing for their lives, and this makes the situation highly dangerous.	
The 4 A's of Rescue; Awareness, Assessment, Action and Aftercare. • Awareness: recognise an emergency and accept responsibility. • Assessment: make an informed judgement. • Action: develop a plan and affect the rescue. • Aftercare: give aid until medical help arrives	

Warm-Up and Cool-Down

Warm-up and cool-down sessions should be part of every class. These exercises prepare muscles properly for physical activity and aid in overall recuperation and ultimately prevent injury.

Every physical activity session should be preceded by a period of warm up where the body is prepared gradually for the effort to follow. Warm up sessions generally include (a) joint mobility exercises, (b) stretching exercises and (3) preparatory/motivational games or activities. **Warm-up activities should last between 5-8 minutes.**

Joint mobility

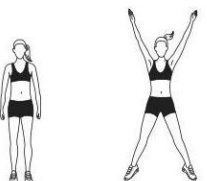

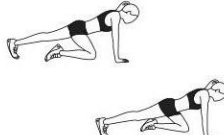

Stretching exercise

jumping jacks  60sec	butt kicks  60sec	mountain climbers  60sec	high kicks  60sec
---	--	---	--

PHYSICAL EDUCATION CONTENT CONCEPTS KNOWLEDGE AND SKILLS

The Movement Analysis Framework¹ - The Wheel (see appendix) - is intended to show how the skill themes and movement concepts interact with each other. Skill themes and movement concepts, differentiate the movements (skill themes) from the ideas (movement concepts) used to modify or enrich the range and effectiveness of skill employment.

Space Awareness (Where the body moves)		Effort (How the body moves)		Relationships
Location	Self-space and general space	Time	Fast/Slow	Of body parts: Round (curved), narrow, wide, twisted, symmetrical/nonsymmetrical.
			Sudden / Sustained	
Directions	Up / Down	Force		With objects and/ or people: Over/under, on/off, near/far, in front/behind, along/through, meeting/parting, surrounding, around, alongside.
	Forward / Backward		Strong / Light	
	Right / Left			
	Clockwise / counterclockwise	Flow	Bound / Free	
Levels	Low / Middle / High			With people: Leading/following, mirroring/matching, unison/contrast, alone in a mass, solo, partners, groups, between groups.
Pathways	Straight / Curved			
Extensions	Large / Small			
	Far / Near			

* This table represents many of the movement concepts taught in physical education. It is not meant to be all-inclusive, but to provide examples of movement concepts.

¹Graham, George, Shirley Ann Holt/Hale, and Melissa Parker. Children Moving: A Reflective Approach to Teaching Physical Education. Mountain View, Calif: Mayfield Pub. Co, 1993.

Year 3

TERM 1

Weeks 1 – 10

TOPIC: FITNESS		WEEK 1-3	
SKILL/S	ACTIVITY		
• Athletic crouch start • Overhand pass • Running	INITIAL PHASE: Warm up activity • Joint mobility • Stretching • Preparatory Games/Activities		
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills	Year 3: Term 1		
	Crouch Start and 100m relay		
	 Activity 1 The teacher facilitates the crouch start: 1. "On your marks" - The front foot is placed a forearm's length behind the line. - One knee is placed on the ground, level with the front foot. - The hands are placed shoulder-width apart, behind, not on the line. 2. "Set" (Not "Get Set") - The hips are raised slightly higher than the shoulders. - Both legs remain bent (front leg approximately 90 degrees, back leg approximately 120 degrees).		

3. "Go"

- Drive the rear leg forward.

Activity 2

100m relay race

In a relay track event; the baton is passed to mark a change in runners.

The **100m relay** uses a non-visual -- or blind -- handoff of the baton as runners maintain their lanes throughout this event.

A non-visual handoff means that the outgoing runner does not look back when receiving the baton.

The teacher will choose:

Four runners to make up a team.

Choosing runners:

1st runner:

The teacher will

- **Place the best starter first.** The ideal first runner has an explosive take-off and never gets disqualified for false starts. This position also requires fast running around the bend of the oval track.

2nd runner:

- **Choose the second runner.** The second runner should perfect their baton handling skills, as the 2nd leg involves both receiving and passing the baton. This is a straight leg, so this is a good spot for a fast sprinter.
- The second to the fourth outgoing runner's palm is face-up and held behind the hip in an **overhand pass**, while the incoming runner uses a downswing to place the baton in the waiting hand.

Example:

3rd runner:

- **Pick a good bend runner for the third leg.** This position also benefits from good baton handover skills.

4th runner:

-End with a strong finisher. Many teams place their fastest runner last, perhaps so they can claim the glory! In fact, psychology may be more important than raw speed.

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: SPORT		WEEK 1-3	
SKILL/S		ACTIVITY	
Sports skills: - Cricket – Batting, bowling; fielding; field placing - Tennis- Forehand and backhand shots: Grip and foot positions - Swimming- Breaststroke, arms and legs action		INITIAL PHASE: Warm up activity - Joint mobility - Stretching - Preparatory Games/Activities	
		Year 3: Term 1	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills Develop learner posture		Activity 1 Cricket: <i>Fundamentals of batting</i> Grip, Stance and Back lift Take guard by holding the bat upright Grip the bat with hands together as close to the top of the handle and as comfortable as possible. All fingers to grip around the handle. Two 'V-s' formed between thumb and forefinger of both hands to be more or less in straight line.	

Stance Feet parallel and fairly close together with toes in line with the middle stump. Knees slightly bent. Toe of bat behind right foot. Head kept still while eyes level facing the bowler.

Back lift Pick up the bat straight towards middle stump. Pick up the bat above stump height.

Allow learners the opportunity to practice this skill

Activity 2

Tennis:

Grip and foot positions - the basic grip place the palm side of your index finger's bottom knuckle against the second bevel if you're right-handed or the eighth bevel if you're left-handed. Then, position the butt of the racquet's handle at the base of your palm and then wrap your fingers around the handle. This is the **Continental grip**.

The **Eastern backhand grip** is obtained when placing the hand such that the base knuckle of the index finger and heel of the hand are right on bevel #1. This grip allows for significant spin and control.

CONTINENTAL

EASTERN

Activity 3

Swimming

Breaststroke is executed with the body facing down. The arms perform semi-circular movements, and the legs perform a frog kick.

This style allows you to swim with your head above the water and therefore breathe freely and keep your eyes open

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: GAMES		WEEK 1-3
SKILL/S	ACTIVITY	
• Handling of the ball • Footwork • Throwing • Arm movement • Releasing of the ball at the correct moment. • Coordination • Control • Striking • Catching	INITIAL PHASE: Warm up activity • Joint mobility • Stretching • Preparatory Games/Activities • Be aware of safety at all times	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills	Year 3: Term 1	
	Activity 1 Tennis set Striking with hands: Use a tennis/big ball Striking with the hand. • Let the learners work in pairs. • In an upward motion hit the ball towards your partner with your hand or bat. • In a downward motion hit the ball towards your partner with your hand or bat. • Use rolled newspapers as bats	

Activity 2

Athletics games: Shotput

- Work in groups of 5
- Each group is given a ball.
- **Face the side of the ring.** Rather than directly facing your target, you should make a quarter turn so that you face the side of the ring. Beginning at a 90° angle from the target, allows you to twist your hips in order to gain momentum when releasing the shot.
- **Step back with your less dominant foot.** If you are right-handed, you will step back with your left foot. This gives you stability and added momentum for throwing the shot.
- **Lower your body by bending your hips and knees.** This will also help you to gain momentum as you throw. Twist toward the back of the ring and keep your non-throwing arm straight
- **Place the shot at the base of your fingers in your dominant hand.** You don't want to hold the shot in your palm, but rather at the base of your fingers, with your fingers slightly spread apart. This allows you to flick the ball off your hand.
- **Hold the shot at your neck, right by the jaw line.** Make sure that your elbow is bent and parallel to the floor. Your thumb should point down toward your collarbone, and you should

point your palm in the direction that you are throwing. Keep your eyes and head back, rather than focused on the shot

- **Explode up into a standing position.** You should twist your body to the same side as your throwing hand as you rise, so that you are facing the target when you release the shot
- **Use your entire body weight to throw the shot.** Extend your arm to its full length while pivoting your hips to face forward
- **Push the shot away from your neck in one fluid motion.** Try to release the shot at a 45° angle. Make sure that you wait to release the shot put until your arm is fully extended. You may flick your wrist to add more momentum, but be careful not to overdo it

Activity 3

Throwing:

Work in pairs

- Ball handling: the ball in one hand with finger 2 and 3 across the stitches on the ball with the thumb as your control finger.
- Keep your eyes on the target.
- Step with the non-dominant foot and have your dominant foot in the air to step and throw facing in the direction of the throw. Place your dominant foot towards to the front of the marking line drawn.

	• The movement of the arm must be straight past the body touching the ear. • Lean back and rock forwards, letting the ball go. • Practise the over arm throw
--	--

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: FITNESS		WEEK 4-5
SKILL/S	ACTIVITY	
• First aid skills • Functional training	INITIAL PHASE: Warm up activity • Stretching • Marching in place whilst swinging arms • Leg swings (forward and sideways) • Arm circle and shoulder shrugs	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills	Year 3; Term 1	
	Activity 1 First aid theory (Definition, importance and contents of first aid kit bag) The teacher explains First aid as: - Basic knowledge about how to help people who are suddenly sick or hurt. For example, first aid is used at accidents to help an injured person until he receives medical treatment (help by <u>doctors</u>, <u>nurses</u> or <u>ambulances</u>) - First aid is also used to help people who suddenly become sick, until help arrives or they can be taken to medical care. - A package of things useful to give first aid is called a first aid kit.	

Importance of first aid in Physical Education

First aid can:

- **effectively prevent a sprain or fracture from progressing,**
- stop bleeding
- potentially save someone's life in the event of cardiac arrest or other life-threatening injuries.
- **promotes the sense of safety.** It makes them capable of managing incidents and assessing casualties

Contents of the first aid kit:

1. Gloves for the helper's hands made of latex to protect the helper's hands from blood
2. Dressings of cloth that can be put on wounds to stop bleeding.
3. Bandages of gauze or cloth which hold dressings tightly over wounds.
4. Scissors that can be used to cut tape, to open clothing and to make more bandages and dressings
5. CPR masks or barriers to make it sanitary for a helper to breathe into someone's mouth, which is one part of CPR
6. Blanket made of cloth to cover a sick or hurt person to keep them warm
7. A small first aid book which shows how to do first aid.
8. Adhesive strips (a small piece of tape with a bit of cloth in the centre), special dressings such as moleskin for blisters, and antiseptic creams for small wounds

9. Tweezers to remove stingers, splinters and thorn.

Activity 2

5 stations circuit training

The teacher instructs learners to set up 5 stations for general fitness and rotate.

- Each activity at a station should be timed at 30seconds
- There should be intervals of 60 seconds between each station.
- Each learner should complete at least three sets of the circuit
- Complete the session by having learners do shuttle runs at their own pace

Station 1: Sit Ups or x5

Station 2: Bodyweight squats x5

Station 3: Sit up with arms twist x5

Station 4: Push ups x5

Station 5: Lunges x5

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: SPORT		WEEK 4-5	
SKILL/S		ACTIVITY	
Sports skills: Cricket – Batting, bowling; fielding; field placing Tennis - Forehand and backhand shots: Grip and foot positions Swimming- Breaststroke, arms and legs action		INITIAL PHASE: Warm up activity ▪ Joint mobility ▪ Stretching ▪ Preparatory Games/Activities	
		Year 3: Term 1	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills Develop learner posture		Activity 1 Cricket Bowling The Grip (front view) The ball is held between first two fingers with the thumb under the ball. Do not grip the ball too tightly. The bowling action divided into 4 learning steps 1. Coil position. 2. Windmill position. 3. Brush Leg Brush Ear position. 4. Follow through position	

Activity 2

Tennis

The **backhand** is hit with the back of your dominant hand facing the direction of the stroke. It can be a one-handed and/or two-handed stroke. Like the forehand, the basic swing pattern starts on one side of your body, moves forward and across, and ends on the other side of your body.

Activity 3

Swimming

Backstroke the body must be as horizontal and streamlined as possible, with the head inline, eyes looking upwards. The alternating leg kick originates from the hip and remains within the body width. The knee bend provides power on the upbeat phase of the kick, finishing as the toes break the water surface.

	The hands enter the water with little-finger first, palm outwards with the upper arm just brushing past the ear.
RECOVERY PHASE: Cool down activity Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.	

TOPIC: GAMES		WEEK 4-5
SKILL/S	ACTIVITY	
• Coordination • Jumping • Skipping • Critical Thinking • Throwing • Aiming • Control	INITIAL PHASE: Warm up activity • Joint mobility • Stretching • Preparatory Games/Activities	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills	Year 3: Term 1	
	1.Traditional Games: Jukskei and Kho-Kho Activity 1 Jukskei: • Learners are divided into groups of 4 players. • Pegs are planted in a sandpit over a distance from 10 to 15 metres away. • Each member has two skei's (and thus two turns). • The playing field consists of two pits juxtaposed in opposite directions, so that play can take place in both directions. • Each time a team member knocks over the peg, he gets three points.	

- If the peg wasn't knocked out, the team lying closest to the position of the peg, scores as many points as they have skei's closer to the peg than their opponent's closest skei.
- The first team to get exactly 23 points first wins the game.

Activity 2

Kho-kho

- **Kho-Kho** is a traditional sports game. It is a sport that helps to increase stamina and aids in motor, social and mental development of school children
- Kho-kho is played by two teams of twelve (12) nominated players out of fifteen (15), of which nine (9) enter the field and sit on their knees (Chasing Team), and three extra (Defending

Team) who try to avoid being touched by members of the other opposing team.

Activity: Learners are instructed to play kho-kho using the guidelines.

Activity 3

Water activities and relay:

- One person from each team will fill up their paper cup, run to their team member holding the bottle and pour water into the plastic bottle. This is a relay, so when the players return to the team, another team member gets a turn. The relay is over when one of the plastic bottles is full.

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: FITNESS		WEEK 6-8
SKILL/S	ACTIVITY	
Basic first aid skills High Jump	INITIAL PHASE: Warm up activity Pulse-raising activities including: - jogging, - jumping rope and - exercising to music	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills	Year 3: Term 1	
	First aid theory practice (Minor cuts and scrapes practical) Activity 1 The teacher reminds learners that: Scenario: - If someone has a bad bleed. What to do? - Press on where the blood is coming out and keep pressing on it - Use a T-shirt or any clothing to press on the bleed - Call an adult Remember to: - Press on it The teacher then asks them what to do if:	

If someone is having an asthma attack....

If someone is upset...

Demonstration/Practical:

Injury: Minor cuts and scrapes

The aim is to stop the bleeding. How?

1. Apply gentle pressure with a clean cloth or bandage. Hold the pressure continuously for 20 to 30 minutes.

2. **Clean the wound.** Rinse out the wound with clear water. Soap can irritate the wound, so try to keep it out of the actual

wound. If dirt or debris remains in the wound after washing, use tweezers cleaned with alcohol to remove the particles.

3. **Cover the wound:** If the bleeding slows, cover the wound with a clean dressing and bandage. Dressings and bandages can help keep the wound clean and keep harmful bacteria out.

Normal High Jump

Activity 2

The **high jump** is a track and field event in which learners must jump unaided over a horizontal bar placed at measured heights without dislodging it.

Step 1:

Aim:

Run and leap/jump onto the mats

Set Up:

- The learners line up at 90 degrees and approximately 10m from the high jump mats.
- Either the higher or lower scissor-style mats can be used for this activity.

Activity:

The learners run in a controlled manner directly at the mats and, taking off from one foot, leap up onto the mat to land on the other foot.

- The teacher to ensure that the learners takes off from one foot and lands on the other foot before the take-off foot is also brought down for balance.
- Ensure an upright (i.e. on feet) landing position up on the mats.
- Make sure that learners don't slow down or stop before taking off. It is a continuous, flowing action.
- Instruct the learners to come to a stop on top of the mats and then, if using the higher style mats, carefully climb down.

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: SPORT		WEEK 6-8
SKILL/S	ACTIVITY	
• Running • Dancing • Throwing • Hitting • Swimming • Catching	INITIAL PHASE: Warm up activity ▪ Joint mobility ▪ Stretching ▪ Preparatory Games/Activities	

• Rhythmic Gymnastics skills	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills. Develop learner posture	Year 3: Term 1
	Activity 1 Cricket Catching a ball Catching is a basic fielding skill. Hold your hands together with your palms face away from your body. To make a reverse cup, interlock your thumbs and index fingers so your hands form a web. As a high ball approaches, raise your hands and position them in a reverse cup. Align yourself with the approaching ball and stand with your knees bent. Keep your eyes on the approaching ball. Remember to relax the hands.  Activity 2 Rhythmic gymnastics Rhythmic gymnastics is a sport in which gymnasts perform on a floor with an apparatus: hoop, ball, clubs, ribbon or rope. The sport combines elements of gymnastics and dance. Learners would be taught to be strong, flexible, agile and coordinated.

Activity 3

Tennis (backhand)

When striking the ball on the dominant side of your body, it is considered a forehand stroke. When striking the ball on your non-dominant side, it is a backhand stroke.

- For a two handed backhand, grip your racket with your right hand on the bottom and your left hand on top.
- While moving towards the optimal position on the court to return the ball, pivot your body sideways with your right arm towards the net.
- Your racket should be behind your body in position for the backswing.
- Take your racket back with your right elbow close to your body.
- Your right shoulder should be facing the net with your left hand gripping the racket, leaning slightly on your back leg preparing to shift the weight to the front.
- While extending your racket in front of you, move your weight onto the front leg and load your body for power to hit the ball.

Activity 4

Swimming

- **The Butterfly** is a dynamic swimming stroke that requires practiced form and fitness. Swimmers perform the butterfly stroke face-down, symmetrically moving their arms while kicking the feet together in a movement known as a “butterfly kick” or “dolphin kick.” Butterfly stroke is one of the more challenging swimming strokes.

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: GAMES		WEEK 6-8
SKILL/S	ACTIVITY	
Batting Bowling Catching Fielding Running	INITIAL PHASE: Warm up activity • Joint mobility • Stretching • Preparatory Games/Activities	
CORE PHASE: Main activities Skill development is most important.	Year 3: Term 1	
	Modified cricket: 6-a-side Description: • Modified cricket is a variation of regular cricket.	

Adequate time is needed to practice new skills

Bowling

Activity 1:

The teacher will group the learners into groups of 6.

- Five learners in each team will get an opportunity to bowl one over
- One learner will be the wicketkeeper
- The opposing team will each have a chance to bat
- Once the 5 overs have been bowled the batting team becomes the fielding team and vice versa

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

YEAR 3

TERM 2

Weeks 1 – 10

DRAFT

FITNESS		WEEK 1-3
SKILL/S	ACTIVITY	
• Jogging • Running	INITIAL PHASE: Warm up activity Pulse-raising activities including: - jogging, - jumping rope and - exercising to music	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills	Year 3: Term 2	
	Activity 1: Jogging (Through the woods) Jogging is a form of running at a slow or leisurely pace. The main aim is to increase physical fitness with less stress on the body. Importance of jogging - Help to build strong bones, as it is a weight reduction exercise. - Strengthen muscles. - Improve cardiovascular fitness. - Help maintain a healthy weight. Activity 1. One learner becomes the catcher (wolf) and stands on one side of the hall or if outside by a tree or other feature. The remaining learners either stand at the opposite end of the hall or somewhere else that can be called home. 2. Learners as a group then move towards the wolf taking one or two steps at a time with the objective of reaching the wolf's base before being caught. After a few steps learners stop and call out "What's the time Mr Wolf?" 3. In Through the Woods, the wolf also calls out a way of moving such as hopping, skipping, jogging, walking slowly, walking	

	backwards, etc. Both players and wolf then must move only in this way for that round. So to any call by the group, the wolf replies with the use of the method of moving appended to the sentence "... through the woods." e.g. "jogging through the woods.... it's 7pm" or "Dancing through the woods it's dinner time!" using 'Dinner time' to let learners know the wolf is going to try and catch them
RECOVERY PHASE: Cool down activity Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.	

SPORT		WEEK 1-3	
SKILL/S		ACTIVITY	
Sports skills: • Netball- Catching and passing • Hockey- Grip and dribble • Soccer- passing • Basketball- Dribble and dodging • Rugby- Passing • Gymnastics: Floor Sequences		INITIAL PHASE: Warm up activity ▪ Joint mobility ▪ Stretching ▪ Preparatory Games/Activities	
		Year 3: Term 2	

CORE PHASE:**Main activities**

Skill development is most important. Adequate time is needed to practice new skills

Develop learner posture

Activity 1**Hockey****Grip and dribble**

- The grip is the way your player holds the hockey stick with their hands. Dribbling in field hockey requires a top left-hand and a lower right-hand grip on the stick while maintaining a wide stance with knees bent and the ball one foot away, all while quickly tapping the ball to move it further down the field. ... When dribbling, the top hand, nearly always left, does 90% of the work, whilst the right hand is looser and allows the stick to rotate freely within and simply supports the stick, as you dribble the ball.

**Activity 2****Soccer**

- **Passing** - when a player kicks the ball to his teammate; used to move the ball closer to the opposing goal, to keep the ball away from an opponent or to give the ball to a player who is in a better position to score. There are mainly two types of passes - long passes and short passes. **Short passes** are usually kept low to quickly get the ball to your teammates, reducing the risk of losing possession of the ball.

Activity 3

Basketball

- **Dribble** is bouncing a ball with one hand while standing, walking, or running. It is used to manoeuvre around a basketball court while avoiding the defenders approaching. You dribble a basketball with your knees slightly bent, you extend your elbow and snap your wrist at the bottom of the movement to allow the ball to bounce to the floor. With your fingertips spread wide, continue to bounce the ball while moving down the court.

Activity 4

Rugby Passing

In passing the ball the player must turn their wrists and their fingers and, once the ball has been released, follow through with arms outstretched towards the player they are passing to. The hand positioned towards the back of the ball rotates the ball while the one at the front guides it. The receiver needs to give the passer a target by putting their hands at chest level · the passer should aim the pass at the receiver's hands. There are many different types of passes in rugby the most common passes used are the basic, spin and pop pass.

Activity 5

Gymnastics

Floor sequences

Gymnastics is a sport that includes physical exercises requiring balance, strength, flexibility, agility, coordination, dedication and endurance. Tumbling are the activities involving springing (jumping or moving rapidly), rolling, twisting and turning of the body. After becoming proficient in the basic tumbling drills, the beginning gymnast should be ready to build a basic floor routine, this would include forward rolls, backward rolls and a cartwheel. Floor activities are performed on a mat, foam or floor.

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: GAMES		WEEK 1-3
SKILL/S	ACTIVITY	
• Coordination • Jumping • Crawling • Catching • Throwing • Balance	INITIAL PHASE: Warm up activity • Joint mobility • Stretching • Preparatory Games/Activities	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills	Year 3: Term 2	
	Activity 1 Obstacle course Learners work in groups of four to five Find a good space for the obstacle course. You will need to find a good location to build it in. Look around for the best available space for your obstacle course. Think about this: • Hills might be obstacles themselves and can add difficulty to your course. • Flat areas are a great location if you plan on building obstacles yourself that need to be level. • Bodies of water can be used as a fun swimming obstacle or something to jump over. • Make sure your space has enough room for any obstacles you want to include. • Check that the area is free from any hazards such as stones, hard surfaces, or anything else that could cause harm • Consider how the obstacles will work sequentially. • Make sure obstacles are far enough apart so that they won't interfere with one another • There must be a definite starting and finishing point.	

- Have 7 stations.
- Learners need to be given instructions on what to do at each station.

Obstacle course: (Number the stations with the use of cones and add an instruction card to each station.)

Whistle blows and groups starts. While the whistle blows a stopwatch is starting to record the time of each group.

Station 1

- Leap through the hoops

Station 2

- Climb on benches and jump on mat

Station 3

- Skipping

Station 4

- Run anticlockwise around an obstacle

Station 5

- Throw a beanbag into a laundry basket.

Station 6

- Run while balancing a beanbag on your head.

Station 7

Touch the wall to finish

There should be a defined finish line to indicate where learners need to stop.

Activity 2

Chase your partner

- Divide the learners into pairs.

- Give a “tail” (e.g., scarf, cloth, colour band) to each participant and have them stuff a small part of it into the side of their shorts/pants.
- Tails are not to be wrapped around belts or in belt loops.
- Remind participants that no body contact is allowed and that they can only grab their partner’s tail.
- At the signal, each participant tries to grab the tail of his or her partner without having his or her own tail taken.
- When a participant’s tail is removed, it is returned and the participant puts his or her tail back, and the participants play again.
- Have participants count how many times they can remove their partner’s tail in the allotted time.
- The leader asks open-ended questions to help participants refine their movement strategies and tactical solutions during the activity.

Examples include:

1. When being chased by your partner, what are some choices that you have to avoid getting your tail taken away?
2. What strategy can you apply to successfully remove your partner’s tail?

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: FITNESS		WEEK 4-5
SKILL/S	ACTIVITY	
• Running • Delivering/passing	INITIAL PHASE: Warm up activity Pulse-raising activities including: - jogging,	

	- some practice starts and accelerations
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills	Year 3:Term 2
	Activity 1 Shuttle relay - A shuttle relay is a relay race which is run back and forth over a straight course. - Each participating team is divided in half, with team members positioned at each end of the course or “track”. - The first and third runners of a team running in one direction and the second and fourth runners running in the opposite direction. - When used in a track & field setting, the runners will usually carry a relay baton. Example:  Activity: Relay 1. Divide the learners into groups of 8 in which half of the group is positioned at each end of the track and running in opposite directions. 2. Using a normal running action, learners should hold the baton at the bottom end 3. When passing the baton, they should hold the baton up vertically and stretch their arm out when they are getting close to the next runner.

Example:

4. When taking the baton, they should stretch their arms out in front of their chest and hold their hands together in a "butterfly" position.

Example:

5. NOTE: The learner passing the baton should run to the side of the learner taking the baton to avoid interference/collisions

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: SPORT		WEEK 4 -5	
SKILL/S		ACTIVITY	
Sports skills: • Hockey- corners • Soccer- trapping • Basketball: passing • Rugby: scrum and line-out • Volleyball: passing		INITIAL PHASE: Warm up activity ▪ Joint mobility ▪ Stretching ▪ Preparatory Games/Activities	
		Year 3: Term 2	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills Develop learner posture		Activity 1 Hockey Corner There are two types of corners in hockey: long and short. Short corners are like power plays awarded to the offense for a penalty committed by the defense inside of the shooting circle. More attempts are made for direct goal on short corners.	
		Activity 2 Soccer Trapping	

Trapping a soccer ball is a way of stopping the ball and gaining control of it quickly. Have your foot meet the ball out in front of your plant leg. ... Cushion the ball as it is about to hit your foot. ... Make contact on the upper middle part of the ball. ... Have a slight lean forward with your chest. ... Keep your eyes on the ball. As you gain more experience in soccer, trapping the ball becomes a very necessary skill.

Activity 3

Basketball

Passing

A pass in basketball is one of the most basic and fundamental skills needed to play the game. It is when a player moves the ball to another teammate through the air without being right next to each other. A pass advances the ball anywhere around the court anytime a player is not dribbling it. Spread your fingers out and form an oval between the thumbs and index fingers of each hand. Bring the ball close to your chest. Push the ball out towards the target, stepping toward the target at the same time.

Activity 4

Rugby

Scrum

The purpose of a scrum is to restart play with a contest for possession after a minor infringement or stoppage. The scrum must consist of eight players from each team that are packed closely together with their heads down: the "front row" (two props, a loose head and tight head, and a hooker), the "second row" (two locks), and a "back row" (two flankers, and a number 8).

Activity 5

Volleyball

Passing

The purpose of a pass is to direct the approaching ball to the setter who is the playmaker of the team. Passer is the first person to touch the ball when it is travelling over the net. The two main ways to **pass a volleyball** are the **forearm pass** and the **overhand pass**. With the **forearm pass or dig** join hands ... foot in front (shoulder width apart) on balls of feet ... bend knees (ahead of toes), shoulders ahead of the knees ... arms straight, wrist down

and back straight ...contact ball waist height away from body with hips forward ... follow through (back foot moves to the front).

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: GAMES		WEEK 4-5
SKILL/S	ACTIVITY	
• Jumping • Skipping • Catching • Crawling • Hopping	INITIAL PHASE: Warm up activity • Joint mobility • Stretching • Preparatory Games/Activities	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills	Year 3:Term 2	
	Gymnastics and Sports: Agility Agility is the ability to move quickly on your feet and this can help your speed, strengthen your lower body and reduce the risk of injury. <u>Examples include:</u>	

- Lateral Jumps.
- Lateral Running, Side-to-Side Drills.
- Dot Drills.
- Jump Box Drills.
- L Drills.
- Agility Drill.
- Shuttle Runs

Activity 1

Lateral Jumps with ladder

- Lateral jumps help build explosive power, balance, and coordination by using our natural body weight.
- This advanced agility training exercise is essential for any athletic position that requires lateral coordination and power.
- For best results, be sure to perform this drill after a thorough warm up. Another great option is the lateral single leg hop.
- Agility ladder workouts are great for targeting the lower body, specifically fast-twitch muscles. You'll develop strength and endurance in your hamstrings and hip flexors as well as improve joint flexibility.

Activity 2

Lateral Running, Side-to-Side Drills

- Lateral running drills greatly improve both knee and ankle stability, making them ideal for court-sports.
- For proper form, maintain a low centre of gravity and quickly step side-by-side through the ladder.
- Be sure to step both feet, one at a time, inside each rung of the ladder.

- While driving your arms forward, always aim to land on the balls of your feet.
- Repeat from right to left and then again, left to right. Proper form is the key to your success

Activity 3

Jump Box Drills

- Great for your quads, glutes, and hamstring muscles, start by stepping 8 times with a medium to heavy resistance (depending on your ability).
- Keeping your knees over your toes, jump as high and as fast as you can.
- Land safely on the balls of your feet. Repeat drills for 10 - 20 seconds

Activity 4

Lunge

- Stand facing the right ladder rail. Jump into a lunge on your right leg, with right foot in the first square and left foot outside the ladder. Jump, switching legs in mid-air, so left foot is in the square.
- Jump and switch legs again, this time jumping forward to the next square. Repeat. At the end of the ladder, run backward to the starting point and repeat.

Activity 5

Side-step toe-touch

- Stand inside the first ladder square, facing the left ladder rail, with knees slightly bent. Jump right foot forward two squares, tap left toe to right ankle, then jump left leg back one square. Continue moving forward.

- At the end of the ladder, run back to the starting point and repeat.
- Do 30 seconds on one side, switch directions to jump with left foot.

Activity 6

Quick feet

- Stand to the right of the ladder, with knees slightly bent and torso hinged forward. Tap left foot into ladder square, bring it to meet right foot, taking a quick step forward with right foot. Continue moving forward.
- At the end of the ladder, run back to the starting point and repeat.
- Do 30 seconds on one side, switch directions to tap right foot into the ladder squares.

Activity 7

Obstacle course

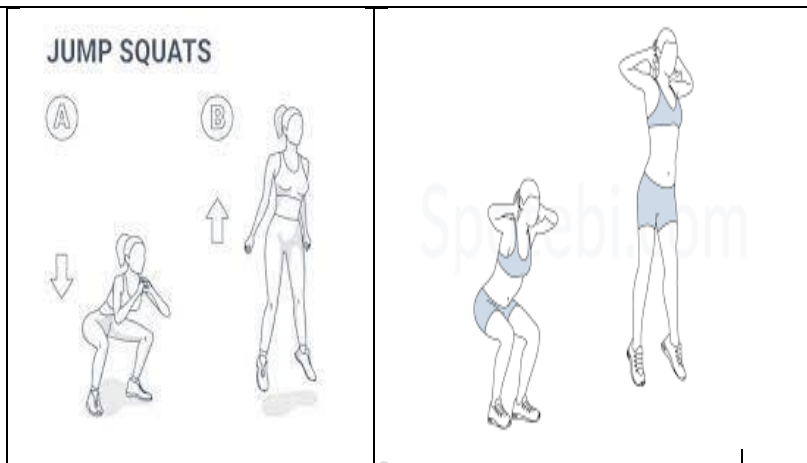

- Learners are divided into 2 groups. Pack **an** obstacle courses that are the same for each group.
- There must be defined starting point and a finish line.
- Learners are given instructions on what to do at each station.
- Each team is being led by a leader.

At the blow of the whistle the teams start

Station 1

	Go through 5 hula-hoops Station 2 Jump 5x by swinging the rope in a backwards motion Station 3 Throw 2 beanbags into the basket Station 4 Walk 2x over the balance board Station 5 Swing the hula hoop 3x by moving it with your hips Station 6 Do 5 jumping jacks Station 7 Jump with 2 feet at the same time through the ladder. Station 8 Walk like a frog to the next station Station 10 Crawl through the legs of the chair underneath to the other side. Finish: Sprint to the finish line.
RECOVERY PHASE: Cool down activity Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.	

TOPIC: FITNESS		WEEK 6-8
SKILL/S	ACTIVITY	
• Running • Hopping • Skipping • Jumping • Twisting • Reaching • Falling • Stopping • Throwing • Catching • Kicking.	INITIAL PHASE: Warm up activity - Joint mobility - Stretching - Preparatory games/activities	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills	Year 3: Term 2	
	Activity 1 Squat jumps 1. A Squat Jump is a full-body exercise that primarily strengthens the legs and core. 2. The squat movement focuses on developing the quadriceps and calf muscles while the jump adds a heart rate-boosting cardio element to your strength training. 3. Squat jumps can be done as a single exercise or as a combination that includes other movements before and/or after the jump	

Importance of squat jumps

- squat jump improves sprint performance since both need that explosive power from the muscles
- It is also good for children as young as age 5, and will help them develop their running and kicking abilities, as well as balance and agility.
- Builds muscle and strength.
- Boost aerobic, cardiovascular fitness and circulation.
- Improves mobility and balance.
- Burns calories and fat.
- Improves sport performance.
- Strengthen bones.

Activity

Ask learners to stand in rows of 5 and:

Stand with feet shoulder width and knees slightly bent.

Bend their knees and descend to a full squat position.

Engage through the quads, glutes, and hamstrings and propel their body up and off the floor, extending through the legs. With the legs fully extended, the feet will be a few inches (or more) off the floor.

Descend and control their landing by going through their foot (toes, ball, arches, heel) and descend into the squat again for another explosive jump.

Upon landing immediately repeat the next jump.

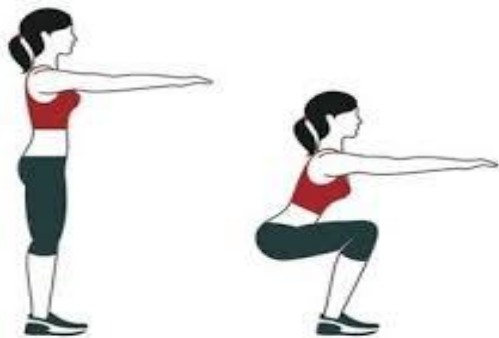

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: FITNESS		WEEK 6-8
SKILL/S	ACTIVITY	
Functional /Circuit training	INITIAL PHASE: Warm up activity - Joint mobility - Stretching - Preparatory games/activities	
	Year 3: Term 2 Activity 1 Circuit training - Circuit training is a style of workout performed with different stations or exercises at a high intensity with little to no rest between each station or exercise - The whole idea of circuit training is to work different muscles all at the same time with a minimum amount of rest CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills Activity Station 1: Sit up (crunch) 	

1. Lie on the floor facing the ceiling with a slight bend in your knees and arms bent at the elbows and hands lightly touching your head by the ears.
2. Engage your core and lift your upper body so your right elbow touches your left knee.
3. Return to the start position then lift your upper body so your left elbow touches your right knee.
4. Return to the start position.

Station 2: Squat jumps

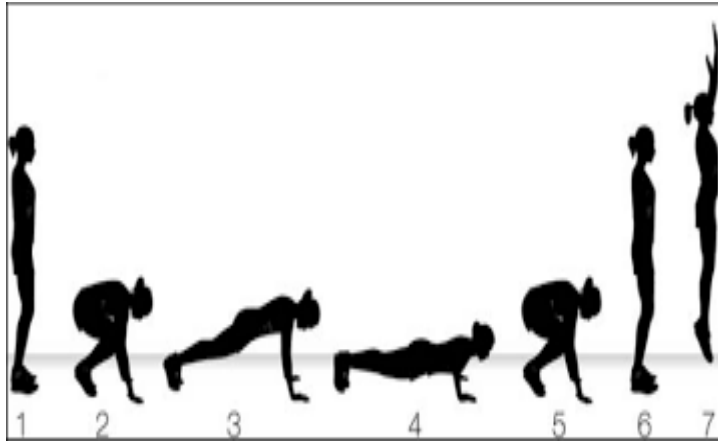

1. **Stand with your feet shoulder-width apart.**
2. Start by doing a regular squat, engage your core, and jump up explosively.
3. When you land, lower your body back into the squat position to complete one rep. Make sure you land with your entire foot on the ground

Station 3: Press ups (push ups)

1. Get down on all fours, placing your hands slightly wider than your shoulders.
2. Straighten your arms and legs.
3. Lower your body until your chest nearly touches the floor.
4. Pause, then push yourself back up.
5. Repeat.

Station 4: burpees

1. Squat down and place both hands on the floor in front of you
2. Jump feet back into plank position
3. Jump feet forward
4. Return to standing

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: SPORT		WEEK 6-8
SKILL/S	ACTIVITY	
Sports skills: • Hockey- Striking at goal • Soccer- Goal keeping • Basketball- Shooting, lay-up • Rugby- Punting, passing and kicking • Gymnastics- Forward • backward roll, rhythmic	INITIAL PHASE: Warm up activity ▪ Joint mobility ▪ Stretching ▪ Preparatory Games/Activities	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills Develop learner posture	Year 3: Term 2	
	Activity 1 Hockey Striking at goal Field hockey players must learn to hit the ball in varying ways to master the sport. There are five ways of hitting a field hockey ball, these include: the drive, scoop, flick, slap shot, and push pass. The player has a semi-circular area in front of each goal which extends out from the goal line to a maximum distance of 15 yards and from which the ball must be hit in order to score a goal	

Activity 2

Soccer

Goal keeping

In soccer (football), the goalkeeper is the player positioned in front of the goal whose job is to prevent the ball from entering it (crossing the goal line).

The basic movement requires the goalkeeper to have his arms apart (shoulder width) and have his weight slightly on his toes ... he takes the ball with arms stretched, elbows in ... he should keep his body behind the ball. If the ball slips through their hands, it will hit their body.

Activity 3

Basketball

Shooting

To shoot the basketball into the basket, keep your legs apart and extended. Your feet need to be in a comfortable position and approximately shoulder-width apart. ... Get balanced before the ball is in your hands so you can take a shot as quickly as possible without having to regain

balance before shooting. The different types of scoring shots: Jump shot is most frequently used for a mid to long-range shots including shooting beyond the arc ... Hook shot ... Bank shot and Free Throw.

Activity 4

Rugby

Punting

To punt the ball the player must kick the ball before it touches the ground. The player/learner is going to put your hands in a position that's going to allow you to drop the ball. At the right position at the right time onto your foot. A player punts to keep play at their attacking end for defensive as well as offensive reasons.

Activity 5

Gymnastics

Forward/backward roll

A gymnastic movement in which the body is turned heels over head with the back of the neck resting on the ground. The backward roll is similar to the forward roll, but in reverse. The gymnast starts in a standing position and bends to a squat/sitting position with their arms in front.

They then lower and lean back slightly until their bottom reaches the floor. The key point for the backwards roll is to tuck your chin and round your back in the beginning we're going to focus on bringing our legs up over us pushing away from the ground.

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: GAMES		WEEK 6-8
SKILL/S	ACTIVITY	
• Coordination • Catching • Throwing • Invasion • Defending • Jumping • Sprinting • Crawl	INITIAL PHASE: Warm up activity • Joint mobility • Stretching • Preparatory Games/Activities	
CORE PHASE:	Year 3: Term 2	
Main activities Skill development is most important. Adequate time is	Activity 1 Obstacle course	

needed to practice new skills	Learners are divided into 2 groups. Pack obstacle courses that are the same for each group. There must be defined starting point and a finish line. Learners are instructed on what to do at each station. Each team is being led by a team-leader. At the blow of the whistle the teams start. Station 1 Crawl through the legs of the chairs to get to the other side Station 2 Jump on 1 leg though the hula hoops on the floor. Station 3 Throw 2 beanbags through your legs into the basket Station 4 Walk side-ways over the balance board Station 5 Kick the ball through the goalpost. Station 6 Do 5 sit-ups and do a cartwheel. Station 7 Jump 10 x with two feet with the rope. Station 8 Walk like a duck to the next station Station 9 Walk over the chairs to the next station. Station 10 Sprint to the finish line. Activity 2 Mini Soccer Playing soccer involves several basic skills: passing/shooting, dribbling and controlling or trapping the ball.
--------------------------------------	---

Dribbling

Getting started

- Place five cones 5m apart in a straight line for 20m.
- Starting at Cone 1, sprint with the ball to Cone 2.
- Turn and sprint back to Cone 1, turn and sprint to Cone 3, back to Cone 1, and so on.
- Once you have reached all four cones and are back at Cone 1, take a 55-second rest before starting the next set.

Repeat this until you complete 10 sets (five each with your right and left foot.)

[Mini soccer rules](https://bit.ly/3viYNKi)
<https://bit.ly/3viYNKi>

Activity 3

Mini basketball

Mini basketball cultivates and develops loco-motor skills and object control skill, running (forward and backward) hopping, jumping for height, dodging, side stepping,

landing, balancing, catching, throwing and passing, bouncing, striking with the hand and shooting.

Passing/Throwing

Below are some of the activities that can be applied for learners to refine their passing/throwing skills.

Getting started:

- In pairs with one ball each, players exchange ball (standing, kneeling, sitting, lying on tummy). Progress to wrapping in a figure 8 around legs before exchanging balls
- Passing: players are in pairs, with one ball for each pair.
- The person without the ball takes one or two steps away from their partner and they cut back towards them to receive the pass. As they catch they must stop and turn to face the basket. Then they turn to face their team mate to make a pass.

[Mini basketball rules
https://bit.ly/3BS6VCN](https://bit.ly/3BS6VCN)

Activity 4

Mini hockey

Passing and receiving drills: this drill is good for developing passing as well as moving towards the goal.

Getting started:

- In pairs with one ball
- Player 1 passes the ball to player 2
- Player 1 then follows his/her own pattern
- Player 2 passes the ball back to player 1 for a wall pass back in the space
- Player 2 runs onto the ball and has a shot at goal

Activity 5

Touch rugby

How to play the game?

A player must claim a touch by raising a hand and shouting "Touch!" An attacking player may affect the touch by deliberately touching the opposition.

Attack and defence drill

Getting started:

- Set a narrow grid to attack

Defenders and attackers begin on the touchline in the centre. Both leave at the same time and run around appointed cones, ball carrier should accelerate up toward

inside shoulder of defender to draw in and the pass to the support runner coming from depth who can run in and score

[Touch rugby rules](https://bit.ly/357LMsp)
<https://bit.ly/357LMsp>

Activity 6

Mini Netball

Dodge drill and footwork drill

Getting started:

Activity 7.1: River dance

- Learners in pairs stand face to face with your partner and hold on to each other by the shoulders or arms.
- Both players must try to tag their partners feet with their own without being tagged themselves.

Activity 7.2: Follow the leader/Copy cat

- Choose one player as leader and the other as followers
- Stand facing each other about 3m apart. On the spot performs foot movements like jogging, jumping, hopping on one foot or sliding from side to side and the follower must perform the same action.

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

Year 3

TERM 3

Weeks 1 – 10

TOPIC: FITNESS		WEEK 1-3
SKILL/S	ACTIVITY	
• Running • Tagging • Dodging	INITIAL PHASE: Warm up activity ▪ Joint mobility ▪ Stretching ▪ Preparatory games / activities	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills	Year 3: Term 3	
	Activity 1: The cone game Cardiovascular lap running A lap is one full circuit in a race, or around a track. One lap round a track is 400m. Benefits of Cardiovascular exercise - Lower blood pressure. ... - Improve blood flow. ... - Improve workout efficiency. ... - Lower cholesterol. ... - Decrease risk of heart disease, stroke and diabetes. ... - Promote other heart-healthy habits. 	
	Activity	

1. Before starting, spread out cones far enough apart to ensure running.
2. Half of the cones should be sitting upright and half should be laying down to start.
3. Split players into two teams: one team in charge of laying cones down, the other in charge of keeping cones upright.
4. Teams run around and move the cones to upright or lying down positions.
5. When the time is up, count the number of cones upright and laying down, then identify the winning team.
6. Play two rounds so each team gets the chance to do each activity. Goal: 20 minutes of activity

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: SPORT		WEEK 1-3
SKILL/S	ACTIVITY	
Sports skill • Hockey-Goalkeeping • Soccer-Heading/trapping • Basketball-Passing	INITIAL PHASE: Warm up activity ▪ Joint mobility ▪ Stretching ▪ Preparatory Games/Activities	

- Rugby-
Scrumming/line-out
- Gymnastics-
Rhythmic

Year 3: Term 3

Activity 1

Hockey

Goalkeeping

- Goalkeepers defend their team's goal zone (net) by stopping shots and the ball from entering the net, thus preventing the opposing team from scoring.
- The goalkeeper should try to always stay on the balls of your feet. This helps you keep the ball flat when kicking and making foot saves but is also key when diving or smothering to ensure you don't rotate back. Your head is very heavy so is key in keeping your weight forward.

CORE PHASE: Main activities

Skill development is most important. Adequate time is needed to practice new skills

Develop learner posture

Activity 2

Soccer

Heading

- Heading is a soccer technique. A player hits the ball with their head to move it in a certain direction. They may head the ball toward another player, across the

field, or into the opponent's goal.

- To head a ball, the player needs to brace their neck muscles to control the ball in order to pass, shoot or clear. This can be done by standing, jumping or diving position.
- It is important to keep your eye on the ball at all times while it is coming toward you.

Activity 3

Basketball

Passing

Bounce pass –

- In order to successfully complete a bounce pass, one player must bounce the ball off of the court into another player on their team's hands.
- The ball should only bounce once on its way to the team-mate and should not be intercepted by an opposition player. The bounce pass moves to the team-mate slower than a pass through the air. It is usually used when a player is closely guarded.

Activity 4

Rugby

Scrumming

- Your eight forwards bind together tightly in the 3-4-1 formation and crouch facing the opposition goal-line at the point where the scrum is to take place.
- The other team does the same. The two bound-together packs are now close and facing each other. On the word of the match official the two packs crash together.
- "Crouch", the two packs get in position. The two front rows must be within an arms-length of each other. They then crouch, ready to bind the two front rows together.
- "Bind", the two sets of props bind to each other. Detailed instructions for the binding are given in the Laws of the Game.
- "Set", the two packs may join (pack, crash?) together when ready.

Activity 5

Gymnastics

Rhythmic

- The use of **the hoop** in rhythmic gymnastics gives rhythmic gymnasts a whole host of creative

possibilities, being able to use so many parts of their bodies.

- Circles can be performed around the arm, waist, neck, knees and feet.
- Start by slowly swinging the hoop back and forth. Make sure that when you're doing this as it is not on your arm. But that it is in your hand between your thumb and your finger. From this position the learner can then proceed to create their own movement with the hoop.

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: GAMES		WEEK 1-3
SKILL/S	ACTIVITY	
• Catching • Jumping • Running • Kicking • Hitting • Batting • Dribbling • Throwing	INITIAL PHASE: Warm up activity • Joint mobility • Stretching • Preparatory Games/Activities	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills	Year 3: Term 3	
	Activity 1 Shuttle relay  • A shuttle relay is a relay race which is run back and forth over a straight course. • Each participating team is divided in half, with team members positioned at each end of the course or “track”. When used in an track & field setting, the runners will usually carry a relay baton • Shuttle relays can be run over any distance. They are most commonly run over short distances of 10-50 metres when involving young athletes, depending on the age of those involved.	

Step 1

- Divide the class into groups of 4.
- Let them walk towards the next person in the line to hand them the baton.

Shuttle Relay Teaching Points

1. All runners use a normal running action while carrying the baton.
2. Runners carry the baton at the bottom end.
3. To pass the baton, the incoming runner holds the baton vertically with an extended arm when nearing the receiving runner.
4. The incoming runner approaches slightly to the side of the receiving runner to avoid interference/collisions or having to slow down.
5. The receiving runner waits for the incoming runner with their feet in a standing start "Set" position and with their hands ready to accept the baton.
6. The baton is received with the arms extended at chest height

The hands are held together, slightly overlapping in a "butterfly" position (thumbs in, palms facing forwards, fingers extended outwards).

Activity:

- The 50m shuttle relay will consist of 4 boys and 4 girls from each team. The 4 girls will begin at the starting end and 4 boys to face them.
- The team will run up and down the 50m straight in a shuttle style.
- The receiving runner will be standing waiting to receive the baton with their arm round the back of the pole.

- The incoming runner will put the baton into their hand and the runner will then take the baton round the back of the pole before running on.

Activity 2

Mini Netball

Mini netball modified rules include:

1. Goal posts of 2.5m in height and a size 4 ball.
2. After catching the ball pass within 5 seconds
3. After shuffling on the spot to gain balance before throwing, without moving down the court.
4. There should be strict “one to one” defence play.
5. A player may defend an opponent with the ball from a distance of 1.2m.
6. A team of up to 8 players must interchange at half time.
7. Undefended shot at goal. The GS of GA may not be defended when shooting.
8. All playing positions MUST be rotated during interval
9. Matches and duration of matches shall consist of 2 halves of 10 minutes’ interval between halves.

Activity:

The teacher instructs learners to practice the mini netball modified rules.

Activity 3

Mini hockey

- Mini Hockey is a 7 a -side game played across half of a full sized hockey pitch.
- Girls and boys can participate side by side in what is a high scoring, fast moving, fun game of hockey.
- With only seven (7) in each team it is essential that everyone plays their part, irrespective of their level of skill.

Basic Rules for all to follow:

- When we have the ball we all attack.
- With 6 outfield players, 5 should be pushing forward and 1 should be sweeping.
- When the opposition have the ball we all defend.
- As above that means 5 covering and 1 forward staying high for the counter-attack. This means that defenders have to get used to pushing forwards to provide extra passing options, and forwards have to get used to tackling back.

Activity:

The teacher instructs learners to practice the mini hockey following all the rules.

Activity 4

Mini Soccer

- Mini Soccer is a small sided version of the game made appropriate to the age group.
- Opponents must be 5m away from the ball and in their own half of the field.
- The ball must be played forward.
- In Mini-Soccer a goal cannot be scored directly from a start or restart of play.

Rules of mini Soccer

1. Fields should be measured 25m by 40m.
2. Games should be played 5 on 5 or 6 on 6, including goalkeepers.
3. If the ball is kicked out of a side-line, a player from the team which did not kick it out throws it in.
4. If the ball is kicked out of an end line, the goal keeper will kick, throw or roll it back into play.
5. There are no corner kicks or headers.
6. Players should not push or trip anyone.
7. Encourage ball handling and playing with feet and not hands.
8. If players use their hands or foul in any other way, coaches will tell them about it (educate players) and then continue with the game.
9. Whistles are blown for player shift changes. This should be about every 3 minutes. Do not blow whistles for balls being kicked off of the field.

10. If there is a significant injury, play will stop. Coaches can sub in other players if a minor injury happened.
11. Games end with high 5s and “Good Game” compliments for the opposing team.

Link for mini soccer rules

<https://bit.ly/3viYNKi>

Activity : Soccer Dribbling

The teacher will instruct learners to use the rules of mini soccer and practice the skill of dribbling:

- This drill helps get them used to a key skill in the game of soccer: dribbling with their feet.
- Use four cones to establish a boundary before furnishing every player with a foam soccer ball.
- First, the teacher should demonstrate trapping the ball by putting a foot on top of it to stop its movement.
- Next, have the learners watch a demonstration of using the insides of the feet to guide the ball to the desired location.
- Emphasize the importance of keeping their heads up while jogging and dribbling.

Activity 5

Touch rugby

Description:

- Touch rugby refers to games in which players do not tackle each other but instead touch their opponents using their hands on any part of the body, clothing, or the ball.
- A player must claim a touch by raising a hand and shouting, "Touch".
- The referee is the sole judge of the touch and has the discretion to overrule a claim. (Play to the whistle).
- An attacking player may affect the touch by deliberately touching the opposition

Game duration:

- Two 20-minute halves with a 1-minute half time.

Rules of touch rugby

- Play starts and restarts at the centre with a "tap".
- This is performed by moving the ball on the ground with the foot, free from the hands, and then picking it up.
- Penalties are performed by the same procedure. On both a re-start and penalty the defending team must retreat at least 10 meters.
- Six players are allowed on the field at any one time, with any amount of reserves off the field.
- Reserves can be continuously substituted at any time from one side of the field.
- The substituting players must make contact with each other behind the side-line.
- A try is scored by grounding the ball on, or behind, the try-line. One point is awarded in men's, women's and mixed leagues.
- A legal touch is on any part of the body, clothing and ball.
- When touched, the player in possession must place the ball on the ground at the exact point of the touch.

- Play is re-started by stepping over the ball. It can be controlled with a hand or foot. This is known as a ROLLBALL. The ball may not roll more than a metre.

link for touch rugby rules

<https://bit.ly/357LMsp>

Activity :

The teacher will instruct learners to play touch rugby using the rules.

Activity 6

Mini basketball

Description:

- Mini-Basketball is a game of basketball for boys and girls.
- The aim of Mini-Basketball is to provide opportunities for learners of all abilities to enjoy rich and quality experiences.
- In Mini-Basketball the size of the ball is reduced and the height of the target, the basket, is lowered.
- Basketball has many technical rules. However, more rules are introduced as the children progress in their skill and understanding.
- The teacher or coach has the responsibility to introduce the rules and conventions of the game as appropriate to the learner's development.

- The game can therefore be played at a variety of levels: on an improvised but safe playing area, perhaps into one basket, erected on an outside wall.

The game, would start with the following basic rules:

1. To win the game you must score more baskets than your opponents.
2. You need to keep yourself and the ball inside the playing area (player out of bounds & ball out of bounds rule).
3. You cannot walk or run while holding the ball; so in order to move on court you must dribble (travelling rule).
4. You cannot dribble with two hands at the same time or dribble again after catching the ball (illegal dribble).
5. You cannot make unfair contact (personal foul).

Activity :

Learners are instructed to play the game and implement the rules.

[Link for mini basketball rules](https://bit.ly/3BS6VCN)

<https://bit.ly/3BS6VCN>

Activity 7

Volleyball

Description:

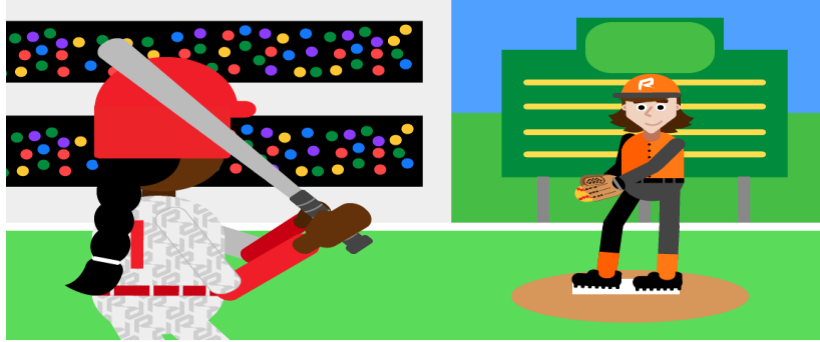

- In volleyball there is a maximum of 6 players on one side of the court at all times.
- There should be three players situated in the front row to the net and three players in the back row.
- The maximum number of touches per side is 3. That means you can only hit the ball (or contact it) at most 3 times before having to hit the ball over the net to the other side.
- The objective of the game is to send the volleyball over to the opposing team's side of the net so that the other team cannot send the ball back to your own side.
- Every game begins with a server who will serve the ball over from one side of the court to the other.
- When the receiving team wins a volley that team gains the right to serve on the next play and all players on the receiving team will rotate clockwise one position.
- A point is earned whenever the opposing team cannot return the ball to the other side within 3 hits or when they allow the ball to drop to the ground. This is one way to win a volley.
- The point is only valid if the ball touches the ground within the painted boundaries. If the ball hits the boundary lines, then a point is rewarded to your team. If the ball hits the outside of the lines, then your opponents will score a point.

Activity :

Learners are instructed to play the game and implement the rules.

Activity 8

Softball

- Softball is a game **similar** to **baseball** played with a larger ball on a field that has base lengths of 20m, a pitcher's mound that ranges from 15m away from home plate.
- Softball is played by two teams of 9 players each who try to score more runs than their opponent by rounding the bases and crossing home plate as many times as possible. The batting team stays up to bat until the fielding team puts out 3 batters.

Playing Area

- A softball field consists of a pitching rubber, 4 bases (3 bases plus home plate), an infield, and an outfield.

Equipment

- You need a bat, a softball, and softball gloves for each fielder, 4 bases, and a pitching rubber.

Starting Play

- The visiting team bats first while the home team starts out in the field on defence.
- Each fielder lines up in one of the **9 fielding positions**.
- The first batter steps into the batter's box and prepares to hit the pitch.
- Positions Fielding players line up in their designated positions:
- There is a batter's box on both sides of home plate.
- **The batter** may choose which side of the plate to hit from, but both of her feet must be inside the box.
- They attempt to score runs by hitting the ball when it's pitched to them.
- The batter may continue to hit until they: Hit the ball in fair territory, get 3 strikes, or get 4 balls.

Activity: The teacher instructs learners to play a softball game using the guidelines and all the 9 positions.

([link for softball rules](#))

<https://bit.ly/35aVXfP>

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

DRAFT

TOPIC: FITNESS		WEEK 4-5
SKILL/S	ACTIVITY	
• Running • Passing	INITIAL PHASE: Warm up activity - Jog for 30 seconds 10 x Single Arm circles – forwards and backwards each arm 10 x Double arm circles – forwards and backwards - Jog for 30 seconds - Leg swings x 10 forwards and backwards each leg - 2 x 10ms walking on your toes 2 x 10ms walking on your heels - 2 x 10ms high knee raises 2 x 10ms back kicks	
	Year 3: Term3	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills	Activity 1: Interval relay running An interval relay is a relay race in which learners are instructed to run at different speeds in each leg of the relay. Learners are put into groups of 4, with team members positioned at each end of the course or “track”. The interval relays can be run over any distance. They are most commonly run over short distances of 10-50 metres when involving young athletes. Activity The teacher needs to ensure that;	

- | | |
|--|--|
| | <ol style="list-style-type: none">1. Learners understand how to execute interval running.2. Learners know how to handover the baton3. Ensure learners do not collide at the changeover4. The learners will not be racing against each other but use the activity to build stamina and improve the baton handover skill. |
|--|--|

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: SPORT		WEEK 4-5	
SKILL/S		ACTIVITY	
Sports skills: • Cricket- Fielding- defensive and attacking • Tennis- Foot positions for forehand and backhand respectively • Swimming- Strokes- arm and leg actions		INITIAL PHASE: Warm up activity ▪ Joint mobility ▪ Stretching ▪ Preparatory Games/Activities	
		Year 3: Term 3	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills Develop learner posture		Activity 1 Cricket Fielding- defensive As the ball approaches, move into the line of the ball and go down on the knee nearest the ball. Stop the ball alongside your knee, with two hands together and fingers pointing down. This is the formation of the long barrier (the leg position). This is the most effective position to stop a fast-moving ball. Defensive fielding supports a defensive field placing where most of the field is covered by a fielder; the batsman will therefore find it hard to score large numbers of runs.	

This generally involves having many fielders far from the batsman and in front of him, in the positions where he is most likely to hit the ball.

Activity 2

Tennis

Foot positions for forehand

When hitting a forehand you can choose to hit the ball with an open stance, with a closed stance or somewhere between both stances. Open stance forehand – with this stance, you have both feet and your hips open towards the net. It is great for hitting forehands when you are back at the baseline. When you arrive at your position the ball will be on your forehand side. As you arrive at the ball you will plant with your dominant foot, and step forward with your opposite foot as you hit the ball. As you hit the ball and step into it, bring your back foot forward and finish with your feet squared up to the net.

Activity 3

Swimming

Strokes- arm actions

There are 3 stages to your **arm** movements: catching the reach, the underwater downswing and the return. The arm movement for the various strokes are as follows: Breaststroke – requires your arms and legs to remain underwater at all times ...

Freestyle – the arms mimic a windmill ... Backstroke – as with freestyle, the arms mimic a windmill during the backstroke ... Butterfly – the arms make a circular forward motion with both operating simultaneously.

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: GAMES		WEEK 4-5
SKILL/S	ACTIVITY	
• Catching • Swimming • Diving • Kicking • Hitting	INITIAL PHASE: Warm up activity • Joint mobility • Stretching • Preparatory Games/Activities	

• Batting • Hopping • Running • Pushing	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills	Year 3: Term 3
	Activity 1 Athletics: Athletics is an exclusive collection of sporting events that involve competitive running, jumping, throwing, and walking. Track: Sprint Basic Mechanics of Sprinting 1. Hold your torso straight and vertical. 2. Hold your head still, but relax your face and neck. 3. Bend your elbows at 90 degrees. 4. Pretend you are lightly gripping a small bird in each hand. 5. Pump your arms so your hands travel from hip to lip, and keep your arms close to your side. 6. As you pump your arms, keep your shoulders steady but relaxed. 7. With each stride, lift your front knee high and straighten your back leg completely to deliver full power. 8. At the start of your sprint, keep your strides short and quick. 9. Lengthen your strides as you gain speed and momentum. Activity 2: Field: Discus Description: Discus throw is a sport in athletics (track and field) in which a disk-shaped object, known as a discus, is thrown for distance.

In modern competition the discus must be thrown from a circle of 2.5 metres (8.2 feet) in diameter and fall within a 40° sector marked on the ground from the centre of the circle.

Activity

- The discus sits flat against the palm of the throwing hand.
- The edge of the discus sits on the pads of the first joints of the fingers.
- The thumb rests on the back of the discus
- The discus is held in a loose grip
- The athletes then attempt to grip the discus as they have been taught. Check their grip.

Activity 3:

Elevation, rotation, balance with a partner

Work with a partner and do the activities together.

Rotation:

Rotation – this is where the limb moves in a circular movement around a fixed joint towards or away from the midline of the body

Activity:

- Do a rotational jump.

- Rotate your feet by moving the muscles in a circle movement.
- Swing your left/right arm past your body in a circle movement.
- Turn your hips in a circle movement.

Activity 4

Water activities to promote confidence:

Being water confident means: **You 'feel' comfortable in and around water. You can put your face in the water**, both with your feet on the ground, and suspended in the water. You float, comfortably on your back and front. You can exhale air slowly and with control when your face is in the water.

Activity 4.1

Simon Says. Yes, this is the same game kids play on land, brought into the water. “Simon says, blow bubbles!” “Simon says, float on your back!” “Simon says, grab the side of the pool and kick your legs!” This allows you to practice a variety of water skills and new movements

Activity 5: Mini Cricket

Fielding

Activity

The teacher will instruct learners to practice this fielding drills in the game

- Learners should get into the line of the ball
- The left knee to go down if right handed and vice-versa for the left handers.
- Keep head still and eyes on the ball
- Fingers should point downwards, to form a cup shape

General fielding tips

- A fielder must expect every ball to come to him/her
- All fielders must walk in towards the batter as the bowler run up
- When fielded, the ball should be thrown in as quickly as possible, to the wicket keeper or bowler
- Fielders must back up in case a team- mate misses the ball

Deliver an over arm throw after fielding the ball.

- Point your non-dominant shoulder and leg in the direction you are throwing, and shift your weight to your back foot.
- Go into the “bow and arrow” position.
- Pull your throwing arm back behind your head, swing it forward as you shift your weight to your front foot.

Approach a ground ball with speed instead of waiting for it.

- Attack the ball by running toward
- Remember to watch the approaching ball closely from the moment the batter strikes it.
- Attacking the ball keeps pressure on the offensive team.
- Bend your knees and turn your body slightly as you and the ball draw nearer to each other.
- Your non-dominant side needs to lead toward the ball to set you up for a strong throw after you field the ball.

Fielding a speeding ground ball occurs in a split second, so your movements need to be fluid and continuous

Drop your non-dominant knee down into the long barrier position.

- As the ball speeds toward you, lower your lead, non-dominant knee to the ground.
- Your other foot should be flat on the ground with your toes pointed toward your dominant side.
- Align your non-dominant knee with the heel of your other foot in order to create a long barrier.
- If you're right-handed, your right foot should be flat on the ground, your right knee should be bent at a 90° angle, and your right knee and right toes should be aligned toward your right side.
- Your left knee should be on the ground aligned with your right heel, so your right foot and lower left leg form a long barrier perpendicular to the ball.
- Cross your hands in front of your body so they're aligned with the approaching ball, and cup them with the pinkies touching.
- Watch the ball closely, then scoop it up and draw it toward your torso.
- You will run to the ball, drop into a long barrier, and catch the ball in just 1 or 2 seconds.
- Transfer the ball to your dominant hand, then go into the “bow and arrow” position and prepare to throw.
- Position your non-throwing hand and front foot toward the target to direct your throw. Then transfer your weight from your back foot to your front foot to power your throw

Activity 6: Tennis set

Mini Tennis Scoring **does not use traditional** tennis scoring i.e. 15, 30, 40 etc. Instead, simple numbered scoring is used, i.e. 1, 2, 3, 4 etc. Players don't change ends (unless there is an obvious advantage, then at every 6-point juncture) If scores are equal at the whistle a deciding point is played

Mini Tennis Red is **played on small courts with short rackets and soft balls**. It's just like the real game and gives players the opportunity to have long rallies and play different types of shots. A foam or felt ball is used, which is 75% slower than a standard yellow ball

Timed tennis- max 10 minutes per match (length of match determined on competition duration and number of games to be played). Players don't change ends (unless there is an obvious advantage, then at every 6-point juncture) If scores are equal at the whistle a deciding point is played. Players to finish a point if started when the whistle blows

Activity:

The serve is decided by a flip of coin / spin of racket. The winning player chooses who Serves. Games are started and finished by a blow of the whistle.

- The nominated person serves for the first point from the right-hand side of the court; it then alternates every 2

points in a left right pattern. When serving, players should stand behind back line.

- When serving, the ball must not be bounced before being hit.
- The serve must be hit 'under-arm'.
- Serves should be hit diagonally, landing anywhere in the opposite diagonal quarter of the court. Players stay at the same end of the court for the entire match
- Each court should have a helper/scorer, who calls out the scores and helps out with decisions. Outdoor Mini Tennis Red Balls should be used for all matches.
- Rackets no longer than 55cm in length should be used.

Activity 7: Traditional games

7.1 Kho-kho

Kho-kho has its origin in the Indian community. It is a tag sport played by teams who try to avoid being touched by the opposing team members. It is made up of two teams of nine members each, with eight players in each. They kneel facing each other, with the ninth being the chaser.

7.2 Dibeke

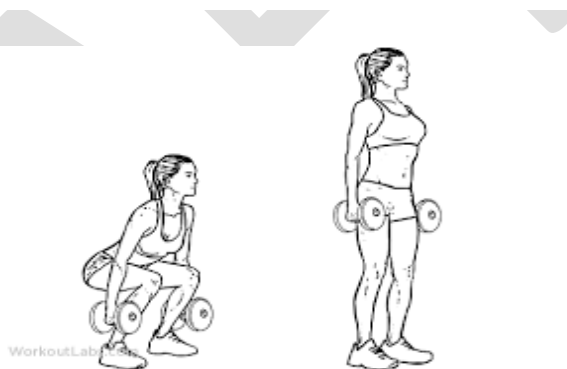

Also known as skununu, this is a running ball game played by two teams of six boys and six girls each, where the attacking team tries to kick the ball away from the defenders, while the latter use their hands to get the ball away from them.

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: FITNESS		WEEK 6-8
SKILL/S	ACTIVITY	
Speed, skill and endurance	INITIAL PHASE: Warm up activity - Joint mobility - Stretching - Preparatory games/activities	
	Year 3: Term 3	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills	Activity 1: Full body work out circuit station The teacher needs to ensure that there is a one-minute rest in between each station. Station 1: Push ups - Get down on all fours, placing your hands slightly wider than your shoulders. - Straighten your arms and legs. - Lower your body until your chest nearly touches the floor. - Pause, then push yourself back up. - The back must remain straight.  	
	- Repeat Station 2: squat - Your posture should be tall with your feet shoulder-width apart and a slight bend in your knees.	

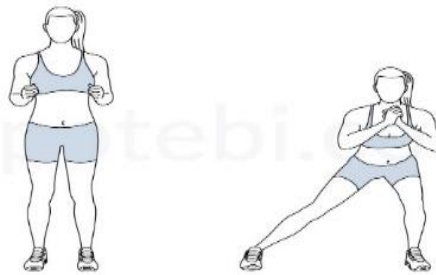

- Your arms should remain long by your sides with a slight bend in your elbows.
- Pre-tension your shoulders and hips, and engage your core.
- Maintain a neutral spine, and begin to bend your hips, knees, and ankles.
- Lower until your thighs are parallel (or slightly below parallel) to the ground. You should only lower as far as you can maintain a level pelvis. The weight on your feet should be evenly distributed.
- Pause at the bottom before standing.
- To begin the upward movement, push your feet into the ground to initiate standing.

Station 3: Alternating lateral lunges

- Start with your feet shoulder-width apart, toes pointed straight forward.
- Step out with your right foot as wide as possible.
- Engage through the right heel as you drop your hips down and back while keeping the left leg straight, stretching the groin on the left leg and keeping both soles of the feet on the ground and toes pointed straight forward.
- Make sure your right knee is tracking over your right foot through the whole motion. Powerfully

“punch” your right heel into the floor to push yourself back to the full standing start position.

Station 4: Bicep curl

- Start standing with your arms at your side. Bring your arms, with your elbows resting at your sides and your forearms should extend out in front of your body. Your knees should stay slightly bent and your belly button should draw into the spine.
- Bring your arms all the way up to your shoulders by bending your elbows. Once at the top, hold for a second by squeezing the muscle
- Reverse the curl slowly and repeat.

Station 5: Chest press

- Lie on a floor.
- Position your arms at about 45 degrees to the body. Keep elbows forward of the shoulder line to avoid stress on the shoulder joint. Present your hands in a fist form.
- Ensure you are in a stable and comfortable position.

- Push the fists upward while exhaling, taking care not to lock out the elbows in an explosive movement. The fists should follow a shallow arc and almost meet over the top of the chest. It's OK to straighten the arms as long as you don't do it with sudden or explosive force. The head and shoulder blades should not rise off the floor.
- Lower the fists, muscles contracted, while inhaling and controlling the return to the starting position.

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: SPORT		WEEK 6-8	
SKILL/S	ACTIVITY		
Sports skills: • Netball- Catching and passing	INITIAL PHASE: Warm up activity ▪ Joint mobility ▪ Stretching ▪ Preparatory Games/Activities		

• Hockey- Grip and dribble • Soccer- dribble... passing • Basketball- Lay-up • Rugby- Passing and kicking • Gymnastics- Agility/ rhythmic, floor sequence	
	Year 3: Term 3
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills Develop learner posture	Activity 1: Hockey Grip Grip keeps players' hands in place during open play and set pieces. It can improve shooting by improving energy transfer. It achieves this by ensuring no energy is lost by the hands moving along the shaft while releasing the ball. Each player's grip will change numerous times over the course of a game. It all has to do with the task at hand: Dribbling, pushing, slapping, and hitting. Start by placing your right hand at the base of the grip and your left hand at the top (this is on the leather covering). Where your thumb and index finger meet is called the "V." The "V" on both hands should face the toe edge — the edge that leads into the curved part of the stick.

Activity 2: Soccer

Dribble

Dribbling is essentially the art of moving the ball past your opponent without him being able to tackle you such that you retain possession. Dribbling makes it easier to achieve the aim of the game, scoring a goal. Use your arms ...when you dribble with speed move your arms as you would when you sprint without the ball ... Stay in an athletic position ... Use the front of your feet ...

Ensure you place feet correctly ... Raise up your knee ... Shield and dribble ... Look at the ball less ... Dribble with a purpose.

Activity 3: Basketball

Lay-up

It is a fundamental offensive skill and a move that players at every level can use in their game. Mastering the reverse layup can help you become a better-rounded player on the court. The layup is one of the first shots a basketball player learns.

The main reason you would perform a reverse layup instead of a regular layup would be to help protect the ball from your defender. A reverse layup uses your body and the rim to protect the ball as you go up for a shot. To execute a reverse layup: Approach the basket from one side ... You will finish on the opposite side ... Come from the left side of the lane and dribble with your outside hand (left hand) ... As you approach the lane line, shuffle your feet so your baseline foot (left foot) is planted in the middle of the lane ... Finish the move by chinning the ball to protect it from your defender as you square your shoulders to the backboard ... Your momentum should carry you across the lane as you shoot the ball with your right hand, off the backboard and through the hoop ... The same steps apply when you are coming from the right side of the basket; simply reverse your hands and feet.

Activity 4: Rugby

Passing

Passing the rugby ball is the most fundamental skill you'll develop when playing rugby. The **pop pass** is most commonly used to get the ball to a nearby player over a short distance. Hold the ball vertically, with both hands at the lower half of the ball, and flick both your wrist at the same time to project the ball upwards. There is also the one handed, short, tricky pass ... You use this pass to keep the ball alive, moving the ball to a close support player ... You would mainly use this pass while fending off defenders with the other arm ...

You use a flicking motion with your hand moving the ball sideways or backwards.

Activity 5: Gymnastics

Agility/rhythmic

Gymnastics develops strength, flexibility, balance, agility and coordination. **Agility** refers to the ability to transition between several positions efficiently and quickly -- important for completing floor routines and exercises on the balance beam, such as back flips and somersaults. Balance, together with agility and motor control, is one of the essential components necessary to produce superior athletic performance. ... The repetition that is at the heart of gymnastics training assists the athlete in sustaining balance through a routine. Agility training improves flexibility, balance, and control. Agility helps the body to maintain proper alignment and posture during movement. Additionally, agility drills encourage our body to learn how to maintain correct body placement.

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: GAMES		WEEK 6-8
SKILL/S	ACTIVITY	
• Catching • Throwing • Touching • Hitting • Batting • Kicking • Climbing • Crawling	INITIAL PHASE: Warm up activity • Joint mobility • Stretching • Preparatory Games/Activities	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills	Year 3: Term 3	
	Activity 1: Obstacle course: Learners are divided into 2 groups. Each group has to complete the obstacle course and the time of completion being recorded. Station 1 Walk across the balance board to the next station. Station 2 Do 10 jumping jacks. Station 3 Do 10 sit-ups Station 4 Do 10 leg lunges	

Station 5

Balance the beanbag on your head and walk to the next station.

Station 6

Crawl underneath the chairs to the other side.

Station 7

Carry 5 glasses of water to the bucket on the other side.

Station 8

Carry the beanbag on a spoon to the other side.

Station 9

Throw 5 beanbags into the basket.

Station 10

Skip 10 times with the rope

And sprint to the finish line.

Activity 2: Mini Netball

Footwork drills

Game: Ice Cream

Getting started:

- One player or coach will be in possession of a whistle while the other players jog around the court. The whistle **blows** and the other players must make a low jump. As the jumping players first foot or landing foot makes

contact with the ground, they must yell, "ice". As their second foot contacts the ground, they must yell "cream". The second foot can be moved to maintain balance. Whistle blows to repeat the process.

Activity 3: Mini hockey

2 Cone drills

The teacher instructs learners to:

- Lay their stick on the ground and place one cone at the each end. They can lift their stick up and using their distance between the cones to work on tight dribbles.
- Their bodies and the ball will both start on one side of the cone and they will be working pulls all the way from one cone to the other.
- They must keep their feet from moving too much but should shift their weight to improve the strength and control as they pull.
- Learners need to focus on keeping their body low to the ground by bending at their knees in an athletic stance.

Activity 4: Mini Soccer

Game: Walking the dog

- Walking the dog is a great way to introduce ball control and dribbling to young players. It also encourages the development of spatial awareness and soccer vision.

Set-up

- Scatter lots of flat cones in two different colours in a large playing area. Every player has a ball.

How to play:

- Tell the learners the ball is their dog. Give the dog a name. Now it is time to take the dog for a walk. Tell the players the one colour cones are lamp posts and the other colour cones are trees. To begin with the dogs want to sniff every lamp post. This means the players have to run with the ball to each cone and pause beside each cone.
- Then it starts to rain. Get the dog under the tree. Now the players run to the other colour cones.

Variants:

- Dribble the ball with both feet.
- Who can run the fastest

(link: mini soccer rules
<https://bit.ly/3viYNKi>)

Activity 5: Touch rugby

Game: Catch me if you can!

Set up a 10 m square and put two obstacles in the middle. One player sprints around the outside to the opposite corner while the other player sprints through the middle and around the obstacles. The first player to the opposite corner wins. Swap roles rep-by rep. do 3-5 sets, resting 2-3 minutes between efforts.

Acceleration- Rolling starts

Place markers out at 10 meters, 15 meters and 20 meters. Jog up to the start line and then accelerate as fast as possible out to the 10 meter mark. Decelerate to the 15 meter mark and then accelerate again to the 20 meter point. Walk back to the start point. Do 3-5 sets, resting 2-3 minutes between efforts.

[link: touch rugby rules](#)

<https://bit.ly/357LMsp>

Activity 6: Mini basketball

[link for mini basketball rules](#)

<https://bit.ly/3BS6VCN>

Basic condition drills for basketball players will build up their endurance with running and jumping and they include:

Basic drill

Learners run side-line for one minute and keep track of how many times they cross the court. They rest for one minute.

Half court sprint

Starting at the baseline, learners should sprint to the half court and return to the baseline. They should repeat 10 times.

Full court sprint

Starting at the baseline, learners should sprint the full court to the opposite baseline, touch the baseline and return to the starting baseline. They should repeat 5 times.

Suicides

Starting at the baseline, learners should run to the first free throw line, tap the line with their hand and run back to the baseline. They should run to the half court line, tap and return to the baseline, finally run to the far baseline. Tap and return to the starting baseline.

Full court lay up

Starting at the baseline, learners should dribble to opposite basket and perform high handed lay- up. They should dribble to the opposite basket and perform a left-handed lay-up. Repeat for two minutes

Activity 7: Gymnastics pyramids:

Thigh Stand

Description:

- A thigh stand incorporates the skills learned in a step-up drill and requires **two bases** and **a top person**.
- **A spotter** should be used until mastery of the stunt is exhibited.
- Have the bases lunge toward each other with their feet overlapped and their toes lined up with the other base's heel.
- With her hands on the base's shoulders, the top person should place her right foot on the base who is standing on her right side and that base should grab her thigh.
- The top person should dip deeply, push off the ground and step up onto the right base, locking her leg. Once her supporting leg is locked, the top person should gently place her left foot on the left base's thigh and lift her hands off the base's shoulders to hit a high "V" motion above her head.

Activity 7

The teacher instructs learners to do the following:

- A thigh stand requires two bases, a **spotter** and a **mounter**.
- The bases should each position themselves in a side-lunge position.
- One should lunge with the left leg and the other should lunge with the right leg.

- The feet on the lunged leg of each base should be touching each other.
- The mounter positions her hands on the shoulders of the bases.
- One leg should be placed in the thigh of a base -- the base can hold onto the mounter's foot for support.
- The mounter should then push off the ground and position her other foot on the remaining base's thigh.
- The spotter can hold on to the waist of the mounter in order to help her on to the bases' thighs.
- The mounter should then straighten up and lock her legs.
- The spotter should keep a constant eye on the mounter.

Activity 8

Traditional dance: traditional waltz

- A traditional waltz is most commonly characterized by: Adherence to 3/4 time (1, 2, 3: 1, 2, 3 time/step). One chord (hand-clap) per measure. A repeating quarter-note pattern where the down beat of each measure features the root of the chord and the second and third beats feature chord tones above the root

Steps:

- Step forward with the left foot (first hand clap)
- Right foot, step sideways to the right (second hand clap)
- Bring your left foot next to your right foot (third hand clap)
- Step back with the right foot.
- Step back sideways with the left foot.
- Bring your right foot next to your left foot

Activity 2

Cha-cha

Leader

	Left foot forward Transfer weight to right foot Left foot to side, slightly back to chasse, left, right, left Right foot back Transfer weight to left foot Right foot to side to chasse right, left, right Follower Right foot back Transfer weight to left foot Left foot to side, chasse right, left, right Left foot forward Transfer weight to right foot Left foot to side, slightly back to chasse left, right, left
RECOVERY PHASE: Cool down activity Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.	

Year 3

TERM 4

Weeks 1 – 10

DRAFT

TOPIC: FITNESS		WEEK 1-3
SKILL/S	ACTIVITY	
- Running - Sprinting	INITIAL PHASE: Warm up activity Jogging and stretching	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills	Year 3: Term 4	
	Activity 1: Crouch start command, get set, go Activity The teacher asks learners to do the following: - For all running events up to and including the 400m, the learners will need to wait one metre back from the starting line. The starter, who controls the race, will call them up to the line when all the timekeepers are ready. - Learners can do a standing or crouch start. How do middle and long-distance races start? - The learners must use a standing start. - For the 800m and over, learners must line up, side by side along a curved start line marked on the track. - The learners in this situation can cross to the inside lane as soon as it is safe to do so. How do I teach a learner to start? “On your marks” position – stand with feet shoulder width apart, place one foot forward pointing down the track. “Set” position – bend at hips and knees, opposite leg and arm forward.	

- Action on “Go” – drive arms and legs – step through with back foot first.
- Crouch or block starts can be used but should be taught by someone with experience in the area such as the Centre coach.

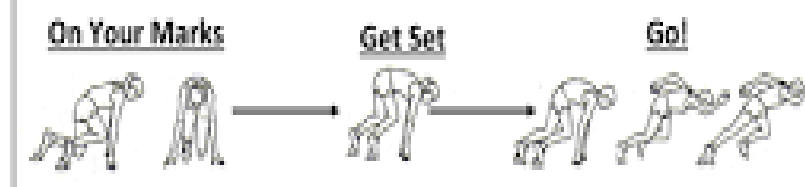

Step 1(Standing start)

- Begin with feet, and toes behind the starting line.
- The hands remain at the side of the body.
- Slowly allow the body to fall forward and accelerate away. This drill helps to establish a low body position that is important during the acceleration phase.
- Repeat 3-5 times over a distance of 20m and 40m

Step 2: (Sprint start)

Sprint Start Technique

- Fingers behind the line, dominant knee on the ground, the other knee must be at the back in line with the dominant knee.
- The toes must be placed firmly on the ground.

	- The learner must lift his waist and body weight on arms. - The learner pushes forward with a strong arm action. - Repeat 3-5 times over a distance of 20m and 40m
--	---

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: SPORT		WEEK 1-3
SKILL/S	ACTIVITY	
Sports skills: Cricket-Batting Gymnastics: Safety and support/assistance Tennis-Ground shots hand ball Swimming - Safety precautions	INITIAL PHASE: Warm up activity ▪ Joint mobility ▪ Stretching ▪ Preparatory Games/Activities	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills Develop learner posture	Year 3	
	Activity 1: Cricket: Batting • Batting is an integral part of cricket there are vertical bat strokes (drive, glance, defensive shot), horizontal bat strokes (cut, sweep, square drive, pull and hook), as well as a variety of unorthodox strokes (reverse sweep, upper cut, helicopter shot, scoop, switch hit, slog sweep). Activity: Batting	

The teacher instructs the learners to do the following:

- The basics of batting: Standing sideways - always stand facing the bowler with your feet shoulder-width apart.
- Hold the bat with the hands touching each other toward the middle of the handle. Establish a comfortable distance between bat and stump.
- Place the toe of the bat behind right foot if right-handed.
- Lift the bat backward when the bowler is about to release the ball.
- Keep eyes on the ball.
- Bring the bat downward to make contact with the ball.

Activity 2: Tennis: Ground shots

- Earlier we dealt with forehand and backhand strokes. Each of these strokes have variations that may be easy or hard depending on each player's strengths and weaknesses. Beside the two basic strokes there is also the serve, volley, lob and drop shot. Each shot has a certain time they have to be played whether it is to win the point or simply to keep a rally going.
- **A serve** (or, more formally, a service) in tennis is a shot to start a point. Normally players begin a serve by tossing the ball into the air and hitting it. The key to this stroke is fluidity, rotation, and use of the entire body to snap upward into the shot

Activity: ground shots practical

The teacher instructs learners to embark on the following practical:

- The learner should start at the baseline with the tennis ball in the non-dominant hand and the racquet in the other hand. They need to use a continental grip to serve.
- They should be turned predominately sideways with the front foot at approximately a 45 degree-angle pointing towards the net post. Players most commonly begin with both racquet and ball together in front of the body, then bring the racquet back while tossing the ball in the air and slightly to the right (for right-handers) or left (for left-handers) and in-front of the body.
- The learner should reach a point in the motion where the tossing hand is extended upwards, and the racquet head is pointed up and behind the head.
- They need to load the hips and knees while remaining sideways and then uncoil into the serve.
- They also need to mimic a throwing motion with the racquet to whip up into the ball and hit it into the opposite service box. Their eyes must focus on the ball until contact.

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: GAMES		WEEK 1-3
SKILL/S	ACTIVITY	
- Swimming - Running - Jumping - Hitting - Batting - Catching - Throwing	INITIAL PHASE: Warm up activity - Joint mobility - Stretching - Preparatory Games/Activities	
	Year 3: Term 4	
	Activity 1: Athletics Activity 1:1: Running technique - Learners in a standing position with their arms on the side. - They are taught the running technique by running on the spot. - Knees are raised to waist height with the opposite arm driving the action. - Knee raises are alternated to simulate the running action. - Tell them to pump their hands from hip to lip. Demonstrate the movement and make sure they do the same. - Start to speed up your movements slightly and bring your knees up high. - Finally, ask them to run fast on the spot for five seconds (as if they are running a race)	

CORE PHASE:
Main activities

Skill development is most important. Adequate time is needed to practice new skills

Activity 1.2: Long jump:

- The athlete begins running from his or her starting position and jumps into a sand pit. There is a foul line, in the run-up area, that the athlete has to be aware of;
- Jumping from beyond this line results in a 'foul jump'. Jumpers try to get as close to the foul line as legally possible before initiating their jump.
- No part of the athlete's foot should cross the front edge of the foul line. If, at the point of take-off, any part of his foot crosses the front edge of the foul line, then the jump is termed to be illegal or a 'foul jump', and does not count.
- The long jumper has three attempts to register his or her best legal jump. A foul jump accounts for an attempt. Only the farthest legal jump counts.
- The distance or the 'jump' is measured from the front edge of the foul line to the first landing point of the athlete, from the first point of contact

Activity 2: Water safety: Around the pool/dam/river

1. Buddy up! Always swim with a partner, every time
2. Get skilled. It's good to be prepared. Above all, know how to swim. Know your limits. If you're not a good swimmer or you're just learning to swim, don't go in water that's so deep you can't touch the bottom and don't try to keep up with skilled swimmers.
3. Good swimmer, keep an eye on your friends.
4. Swim in safe areas only. It's always best to swim in places that are supervised by a lifeguard/teacher/parent.
5. Be careful about diving. Protect yourself by only diving in areas known to be safe.

6. Watch the sun. Sun reflecting off the water or off sand can intensify the burning rays.
7. Drink plenty of liquids. It's easy to get dehydrated in the sun, particularly if you're active and sweating. Keep up with fluids. Getting too cool. Staying in very cool water for long periods can lower your body temperature. Check yourself when swimming in cold water and stay close to shore.

Activity: Apply all the content when going to the swimming pool.

Activity 3: Mini Cricket:

Wicket keeping

A wicketkeeper needs to be alert for every single ball of the innings, adapt to the pace and lengths of the bowlers.

Drills to improve **reflexes** for good wicket keeping:

The teacher will instruct learners to use a tennis ball.

- Have a coach bounce a tennis ball against a wall and the wicket keeper standing in front of the wall tries to catch the tennis ball immediately. The tennis ball will spring off the wall at different angles, which will test and improve the reflexes of the wicket keeper.

Drills to improve **footwork** of a wicket keeper to cover a large area. This will also assist if a ball has deviated from its path

The teacher will instruct learners to use cones

- Set up a goal with training cones and the wicket keeper perform as a similar role as a soccer goalkeeper to prevent the ball from going into the goal or dive towards a ball if needed.

Drills to improve **glove work**. Good wicket keeping depends on the ability of the hand to handle the ball when it lands in the gloves.

The teacher will instruct learners to use a tennis ball and a racket

- Have a partner hit the tennis ball towards you with a racket
- Start off with the ball coming at you thigh high, then try variations in heights. Also perform the drill with and without gloves for different difficulty.

Activity 4: Tennis set:

- Mini Tennis Scoring **does not use traditional** tennis scoring 15, 30, 40 etc. Instead, simple numbered scoring is used 1, 2, 3, 4 etc. Players don't change ends (unless there is an obvious advantage, then at every 6 point juncture) If scores are equal at the whistle a deciding point is played
- Mini Tennis is **played on small courts with short rackets and soft balls**. It's just like the real game and gives players the opportunity to have long rallies and play different types of shots. A foam or felt ball is used.
- Timed tennis- max 10 minutes per match. Players don't change ends (unless there is an obvious advantage, then at every 6 point juncture) If scores are equal at the whistle a deciding point is played. Players to finish a point if started when the whistle blows

Activity:

Play tennis set applying all the skills.

Activity 5: T-Ball

- T-Ball/Tee-Ball is a team sport that is very similar to the game of baseball and is a game that is used to introduce young children to the game through its simplified rules. As well as this, it is also used as a way of helping children to develop hand/eye coordination and ball skills.
- The main difference between Tee-Ball and baseball is that, whereas in baseball a pitcher pitches the ball towards the hitter, this does not happen in Tee-Ball. Instead, the hitter hits the ball off a tee which is stationary, thus allowing young children an easier way of hitting the ball and engaging with the game and developing skills. Although in Tee-Ball the ball is softer, the lack of the ball being pitched also makes it safer for children.

Rules of Tee-Ball

- Tee-Ball is played by two teams of between five and seven players but can be played with more if the team sizes are equal.
- A coin is tossed at the start of the game with the representative from the winning side choosing whether to bat or field first.
- The number of innings shall be exactly the same as the number of players on each team, with the hitting order rotating each innings enabling each player to have the chance to lead off an innings.

Batting

- When batting, the ball shall not be pitched but shall be placed on a tee from which the batter shall hit it.
- The batter (aka hitter) is entitled to have as many swings as they need to hit the ball.

A player is declared out when:

- The ball is hit and then caught without hitting the ground.
- A player who has the ball stands on the base before the runner makes it to the base.
- A fielder with the glove or hand that is holding the ball tags a runner between the bases.
- An innings is complete when each player on the team that is batting has had a turn to bat.
- Once the first team to bat's innings are all complete, it is the turn of the opposition to have their innings.

Activity: Play the game to master the skills by applying all the rules.

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: FITNESS		WEEK 4-5
SKILL/S	ACTIVITY	
• Running • Jumping • Landing	INITIAL PHASE: Warm up activity ▪ Sideways walking ▪ Cone running for agility ▪ Short high knee lift drills (walking and running) ▪ Heel kick drills ▪ Forward lunge walking	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills	Year 3:Term 4	
	Activity 1: High jump • High jump, sport in athletics (track and field) in which the athlete takes a running jump to attain height. • The sport's <u>venue</u> includes a level, semi-circular runway allowing an approach run of at least 15 metres (49.21 feet) from any angle within its 180° arc. • Two rigid vertical uprights support a light horizontal crossbar in such a manner that it will fall if touched by a contestant trying to jump over it. • The jumper lands in a pit beyond the bar that is at least 5 by 3 metres (16.4 feet by 9.8 feet) in size and filled with cushioning material. • There are two types of jumps, the standing high jump and the running high jump. • The only formal requirement of the high jumper is that the take-off of the jump be from one foot. Activity 1.1: “Escape from the Space Monsters” Set-Up:	

- Set up all high jump equipment.
- Divide the group into two teams. Denote each team by a colour (e.g. “red team”; “blue team”).
- Behind the landing mats place two ground markers; one of each team colour (i.e. a red marker and a blue marker).
- The athletes line up in front of the mats ready to high jump from their preferred side.

Activity: Set the Scene

- Explain to the group that they have all been captured by space monsters and are being held in a space monsters’ prison.
- The only way of escape is to high jump over an electrified fence (i.e. the high jump flexible bar).
- The aim of the game is to be the first team to have all athletes safely out of prison.

Bar Clearance

- If an athlete clears the bar, they have escaped and may line up next to their team’s marker on the other side of the mat. Should another person from the same team escape, they join the line behind their team’s marker. This continues until all athletes have escaped.

Touching the Crossbar

- If an athlete touches the bar whilst jumping, they have “set off an alarm” and alerted the space monsters and have therefore not escaped. This athlete must return to the end of the line of those still awaiting their attempt to escape and attempt to clear the bar again when it is again their turn.

Activity 2: Long Jump

Long jump, also called broad jump, sport in athletics (track-and-field) **consisting of a horizontal jump for distance.**

Rules of long jump

- Long jumpers start with a running start on the runway, which measures 40m in length.

The jumper must propel themselves in the air at a designated launching point, also called the take-off board, which is 20 cm wide and try to achieve maximum distance in the air before landing inside a sand pit.

- The end of the take-off board is marked with a foul line. While taking off, the toe of the jumper's shoe needs to be behind the foul line for a particular jump to be deemed legal. Crossing the line results in a foul jump and doesn't count.

Take-off board

While taking off, the toe of the jumper's shoe needs to be behind the foul line, example:

- After being airborne, the jumper lands in the sandpit placed on the other side of the take-off board.
- The distance covered, from the edge of the take-off board to the indentation in the sand (made by any part of the athlete's body while landing) closest to the take-off board, is then measured.
- The entire jump needs to be completed within one minute after the long jumper steps into the runway.

Benefits of long jump

- Stimulates your metabolism.
- Increases oxygen capacity.
- Improves your sense of balance.
- Increases oxygen circulation to tissues.
- Strengthens the heart (Cardiovascular health)
- Increases energy and sense of vitality.

Activity

The teacher will ask learners to do the following:

Activity 2.1: Standing long jump into the pit.

- The athletes perform a standing long jump into the sand pit (Teach the athletes to take off from two feet and land on two feet). Teach the athletes to bend their legs and swing their arms back when preparing to take off; to “stretch out” whilst in the air; and to “land like a frog” with bent legs in the sandpit. A simple coaching cue is: “Bend, stretch, bend”

Activity 2.2: Long jump for distance from a longer approach.

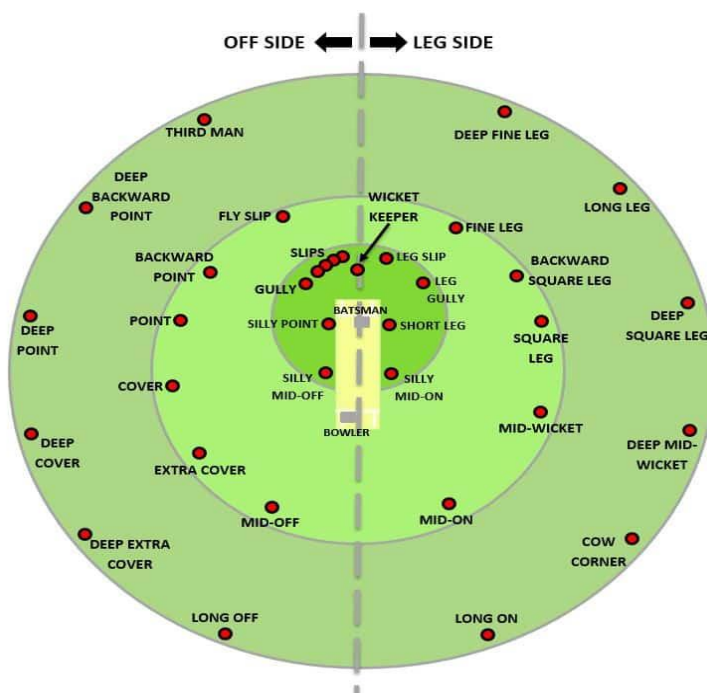

- The athletes to attempt the full long jumping action from a longer approach run. One at a time, and only on the teacher’s signal, the athletes run in and perform a long jump for distance into the pit. Award points or “labels” according to the distance jumped, designated by coloured markers placed next to the pit or lines drawn in the sand. e.g.
- 1st distance = 1 point (Place this where it is achievable for everyone)
- 2nd distance = 2 points
- 3rd distance = 3 points
- 4th distance = 4 points (Make this one difficult!)
- Foul jump = 0 points

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: SPORT		WEEK 4-5
SKILL/S	ACTIVITY	
Sports skills: - Cricket- Fielding placing - Gymnastics - agility - Tennis- Serve follow through, volley - Swimming- front crawl and backstroke and other strokes	INITIAL PHASE: Warm up activity - Joint mobility - Stretching - Preparatory Games/Activities	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills Develop learner posture	Year 3: Term 3	
	Activity 1: Cricket- Fielding placing A cricket team is made up of 11 players, including a captain, a wicketkeeper and several batsman and bowlers. When the team is not batting, each is considered a fielder. There are numerous positions in which a player can field and often determined by a number of factors including their speed, catching ability and the tactics required. An attacking field is when you have most of the fielders near you, in the catching zones, and prying for your wicket with every ball being bowled. Defensive field is when you see the	

players widely spread out to curtail your run scoring opportunities.

Activity 2: Gymnastics – agility

- Agility training exercises help improve speed, explosive power, coordination, and specific gymnastics skills. **Lateral plyometric jumps** help build explosive power, balance, and coordination by using our natural body weight. This advanced agility training exercise is essential for any athletic position that requires lateral coordination and power. **Forward Running, High-Knee Drills** - requiring only a basic speed later and your body, this agility training exercise is designed to improve foot coordination and speed. Agility and explosive speed are achievable when you have the appropriate leg strength, something that is improved with **basic dot drills**. **Jump Box Drills** are great for your quads, glutes, and hamstring muscles. Keeping your knees over your toes, jump as high and as fast as you can. Land safely on the balls of your feet. **Cone Drills** are a popular agility training exercise to develop rapid change of direction ability and speed.

Shuttle run drills are an easy way to inject some high-intensity training into a basic conditioning program while you build speed, agility, and endurance.

Activity 3: Tennis-Serve follow through, volley

- A tactic that many players practically left for dead is serving and volleying. This manoeuvre consists of racing up to the net after hitting a serve to strike the next shot before it bounces (hitting a ball out of the air is called a volley). The aim of this strategy is to put immediate pressure on the opponent with the intent of ending points quickly. From close to the net, a few angles open up that are not conceivable from the baseline (where a player serves from to start a point), some way back from the net. Serve-and-volley is used sporadically in today's game. A good enough serve can often lead to success, as can an unexpected charge to the net. In order to serve and volley effectively, it's essential to have a serve with spin and pace that can be placed accurately. It also requires solid volley technique and the ability to hit overheads. Finally, it requires athleticism, good hand-eye coordination and the right strategy.

Activity 4:Swimming- front crawl and other strokes

- Swimming has its four main strokes: Butterfly, backstroke, breaststroke, and freestyle/front crawl. We demonstrated the freestyle and backstroke earlier. Some are swum moving both arms together. Some are swum moving each arm separately. But there are many more distinctions and commonalities within the strokes.
- The **front crawl or freestyle** is likely the first swimming stroke you think of when you picture swimming. Swimmers choose to use this stroke in freestyle events as it is the fastest. To execute the front crawl, you lie on your stomach with your body parallel to the water. Propel yourself forward with alternating arm movements in a sort of windmill motion that starts by pushing underwater and recovers above water. Your legs should propel you with a flutter kick, which is performed with pointed feet as your legs move up and down in alternation. Do not bend your legs at the knee. Time your breathing, to match your swimming strokes by turning your head to the side while your arm is in the recovery (above water) position. Do not turn your head too far and face upward or you will actually sink into the water rather than remain above it.

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: GAMES		WEEK 4-5
SKILL/S	ACTIVITY	
• Catching • Running • Batting • Hitting • Float • Diving	INITIAL PHASE: Warm up activity • Joint mobility • Stretching • Preparatory Games/Activities	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills	Year 3: Term 4	
	Activity 1: Athletic games: Relay 	

Activity

- The 50m shuttle relay will consist of 4 boys and 4 girls from each team. The 4 girls will begin at the starting end and 4 boys to face them.
- The team will run up and down the 100m in a shuttle style. The baton will be handed over to the next person round an upright pole.
- The receiving runner will be standing waiting to receive the baton with their arm round the back of the pole.
- The incoming runner will put the baton into their hand and the runner will then take the baton round the back of the pole before running on
- Learner starts with the baton in the right hand and hand it over in the next learners left hand.

Activity 2: Water activities that promote confidence

Water activities to promote confidence:

- Being water confident means: You 'feel' comfortable in and around water. You can put your face in the water, with your feet on the ground. You can float, comfortably on your back and front. You can exhale air slowly and with control when your face is in the water.

Activity 2.1

Treasure Diving.

- Scatter diving rings or pool toys in the shallow end of the pool, where it's just deep enough so that the learner will have to briefly submerge to reach objects on the pool floor.

Activity 2.2

Red Light, Green Light.

- A playground favourite, call out “green light!” To allow the learner to move toward you through the water, “red light!” to stop. Play in the shallow end, or use a swim noodle or kickboard. This is another one that teaches comfort in the water.
- The most important thing to remember is to let the learner gets comfortable in the water at their own pace, do not try to force the issue. Sooner or later, they will take to the water eagerly and confidently and their fear of water will fade away.

Activity 3: Mini Cricket:

How to be a good bowler:

1. Take a grip that's more effective for fast bowling.

Place your fore and middle fingers parallel to the vertical seam running down the centre of the ball. Then wrap your thumb around the bottom so that it rests on the seam. The ball should fit snugly in your hand, with no wiggling or slipping. Keep a firm grip on the ball, but don't squeeze it too tightly.

2. Fine-tune your run up.

Experiment with the speed, length and angle of your approach and settle on one that feels natural.

3. Use your wrists to generate movement.

At the moment of release, snap your wrist and follow through with your entire arm until it comes to a stop just above your waist height. Giving the ball a little push as it leaves your hand will allow you to channel your full power into the bowl, adding to your overall speed. Try not to lock your wrist. Keep it relaxed and facing upwards so that you'll be in a better position to whip it as you come to the end of your run up.

4. Prioritize speed over precise placement.

Focus on maximal acceleration. Make an effort to put the same amount of intensity in each delivery as you continue to refine your technique.

Activity 4: Tennis set:

- Mini Tennis Scoring **does not use traditional** tennis scoring 15, 30, 40 etc. Instead, simple numbered scoring is used 1, 2, 3, 4 etc. Players don't change ends (unless there is an obvious advantage, then at every 6 point juncture) If scores are equal at the whistle a deciding point is played
- Mini Tennis is **played on small courts with short rackets and soft balls**. It's just like the real game and gives players the opportunity to have long rallies and play different types of shots. A foam or felt ball is used.
- Timed tennis- max 10 minutes per match. Players don't change ends (unless there is an obvious advantage, then at every 6 point juncture) If scores are equal at the whistle a deciding point is played. Players to finish a point if started when the whistle blows

	Activity:
	Play tennis set applying all the skills.

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

DRAFT

TOPIC: FITNESS		WEEK 6-8
SKILL/S	ACTIVITY	
• Running • Stamina • Speed	INITIAL PHASE: Warm up activity • Joint mobility • Stretching • Preparatory games/ activities	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills	Year 3: Term 4	
	Activity 1: Middle distance running • Interval training can be useful for sprinters, middle-distance and long-distance runners; it is one of the most effective ways to increase running speed. • With these distances the athlete and more important the coach should be aware of the 5 S's and their relevance to middle and long distance running. The 5 S's are Stamina, Strength, Speed, Suppleness and Skill. • Stamina: The capability of sustaining prolonged effort. • Strength: Relevant to endurance running as it is closely related to stamina and conditioning. Enhances your local muscular endurance. Quite related to speed endurance. • Speed: Usually neglected out of the 5 S's. It limits tactical options as it gives the complete package of running. You need speed in order to win the race. It can be developed using drills. • Suppleness: Can be referred to as the flexibility in the body. It is essential for the range of motion in running. Poor Flexibility = A major factor in muscular injuries. All Athletes must develop some sort of flexibility.	

- **Skill:** This is your running style and how you run. It is improved by drills and gives optimal flexibility which gives good posture and therefore core stability which is key in running skilfully. Having the skill is essentially important but so is your tactics. This is utilizing your strengths, developing your weaknesses, correct pace judgement and also changing of speed.
- A middle-distance athlete has almost equal amounts of white, fast-twitching muscle fibre and red slow-twitching muscle fibre to be able to accelerate in the final stretch, extremely strong core muscles, strong legs for good balance and posture, a good sense of rhythm and strength endurance.

Activity: Middle distance running

- The teacher instructs learners to take part in middle distance running engaging all the 5's.

Activity 2: Cross-country running

- Cross country running is a sport in which teams and individuals run a race on open-air courses over natural terrain such as dirt or grass.
- What is overlooked, however, when it comes to cross country is it is one of the hardest sports from a training standpoint, where the actual meet is more of a reward than a challenge, and that it takes a certain breed of person to run the 5km course, especially when you have to run kilometres and kilometres to get ready for the race.
- A good rule of thumb when determining tempo pace is to make it 30 seconds per kilometre slower than your 5km pace. So, if you run seven-minute per kilometre in the 5km, tempo pace should be around 7:30 per

kilometre. Working this energy system can take many forms. Some runners like steady tempos of three to five kilometres.

Activity: Interval training

The teacher instructs learners to engage in the interval training as follows:

- Warm up: 5-minute easy jog including 1–3 30-second accelerations (strides)
- Run: 30-second sprint at 5 km pace.
- Recover: 1 minute at an easy pace.
- Repeat: Do the run/recover cycle for a total of 20 minutes.
- Cool down: 5-minute easy jog.
- Start cross country training early.
- Train with a group of cross-country runners.
- Run consistent distances during cross-country runs.
- Increase your cross-country distances after three weeks.
- Use cross-country speed work.

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: SPORT		WEEK 6-8
SKILL/S	ACTIVITY	
Sports skills: - Cricket - Wicket keeper and field placing - Gymnastics: Agility, handstand, head stand - Tennis- Serve and follow through - Volleyball, volleying and digging - Swimming- Races - Netball – catching and passing - Hockey – grip and dribble - Soccer – dribble and passing - Basketball – lay up - Rugby – passing and kicking	Formation: Lines, rows, semi-circle, dispersed, individually, paired, etc. INITIAL PHASE: Warm up activity - Joint mobility - Stretching - Preparatory Games/Activities	
CORE PHASE: Main activities Skill development is most important. Adequate time is	Year 3: Term 4 Activity 1: Cricket - Wicketkeeper and field placing	

needed to practice new skills Develop learner posture	• Wicket keeping is the most important fielding position, and one that all teams have to fill! The wicketkeeper stands behind the batsman and is responsible for catching the ball in their gloves if the batsman edges, misses or leaves the ball. • Teach the wicketkeeper to keep their hands low and eyes glued to the ball when taking the bouncing ball, allow the arms to stay long so that the hands come up underneath the ball. This stops the wicketkeeper having to go back down for the ball. Practice taking the ball up to the stumps and down the leg side, put a chair or long box in the way and have a fellow learner throw the ball at you. Footwork is critical for all wicketkeepers. The best training to improve your footwork is to set up a 'goal' with training cones and the wicketkeeper performs a similar role as a football or hockey goalkeeper – prevent the ball from passing you. Glove work is critical, focus on having a 'good cup' and receiving the ball with soft hands. Train with tennis balls and a tennis racquet. The teacher or training partner hit the tennis ball towards the wicketkeeper with the racquet. Start off with the ball coming at you, thigh-high, then try variations in heights. Also perform the drill with and without gloves for different difficulty. And finally, keep changing the distance between the training partner and the wicketkeeper for further variation. • The distance between the wicketkeeper and the batsman varies depending on the speed of the bowler. If a fast bowler is bowling, you'll see most wicketkeepers stand approximately 20 metres away from the batsman. If a spinner is bowling, the wicketkeeper will move closer and stand behind the stumps. This is due to the difference in bounce achieved by the different types of
---	--

bowlers. Wicketkeepers are usually very good athletes, with great levels of agility and hand-eye co-ordination. Bowlers don't always bowl accurately, they are required to dive around a lot to catch the ball, and they are also responsible for catching incoming throws from the other fielders. When spinners are bowling, the fact that the keepers come closer to the stumps gives them even less margin for error. A top-class wicketkeeper needs to be great at anticipating the amount of spin that the spinner is going to get, as well as great at noticing any variations that the spinners bowls. They are also responsible for catching the ball and 'stumping' the batsman if they leave the crease. Wicketkeepers fielding close to the stumps will often wear a helmet, whereas if they are standing a long way from the stumps, they may not choose to wear any head gear at all. The general field placing is as follows: The Close Catching Infield – this area contains the fielders that are the closest to the batsman. The Inner Ring – this area contains the fielders that will usually be looking to stop the batsmen running singles. The Outfield – this zone contains all the other areas right up until the boundary on all sides of the wicket. Fielders placed in this zone will be there primarily to stop the batsman hitting the ball for boundaries.

Activity 2: Gymnastics: Agility, handstand, head stand

- Not only does a **handstand** help the gymnast develop strength, balance, and spatial awareness, a proper handstand position is a basic progression for

numerous skills on all of the gymnastics apparatuses and in all of the disciplines. The **headstand** teaches you to keep your body as one unit, but you have a slightly lower centre of gravity, as well as a much bigger base of support, making it easier to do than a handstand. When you're starting out it is recommended to kick-up against a wall in case you over balance. It is important when executing the handstand to squeeze your butt. When you go into a handstand, you should be squeezing your butt the entire time, starting with the kick up ... Keep your abs tight ... Push through your shoulders ... Glue your arms to your ears ... Keep your legs tight ... Point your toes ... Look behind you.

Activity 3: Tennis-Serve and follow through

- The follow through completes your service motion. From contact, follow through so that the racket points straight down at the court and get your back foot up so that all the weight is on your front foot. Bring the racket around to the other side of your body in a smooth and relaxed motion. Your follow through should end with your hands touching your opposite shoulder (for right handers -right hand on left shoulder for forehands and left hand on right shoulder for two handed backhand-opposite for lefties). Once the ball

leaves your tennis racket, you're in the follow through stage. ... Follow through is what your tennis instructor means when he or she tells you to finish with the racket in front, or finish with the racket high, or finish with the racket up and over your shoulder. With the backhand your follow-through should leave the racket in front of your body, pointing in the direction where you've hit the ball. A backhand shot involves turning your arm slightly across your body to hit the ball.

Activity 4: Volleyball - volleying and digging

- To **dig** a volleyball means you contact and intercept the ball, while your team is on defence by deflecting it up in the air with your arms held together. You defend or dig the volleyball once it crosses into your court after an attack hit by the opposing team, so they don't score a point.
- Digging is the action of keeping the ball in play, so another player can have a chance to continue the rally. Passing will give you a chance to work on, so called "in system" plays, when you can work on your initial offence. Digging usually gives you a chance to either free the ball to another side or have out of the system attack. A volley or set is typically a front-line pass or a overhead pass from a back player to the front players, or a move done by players who are positioned near the net. Knees should be bent, and hands extended 10 to 12centimetres above the head.

The fingers should be spread to imitate the shape of the ball; make a triangle with the thumbs and first fingers. The ball will make contact with the fingers right above the hairline. Then the arms are extended in the direction the player wishes the ball to go. Freeze the motion when the arms are fully extended. This pass must be done with coordination to avoid “holding” the ball. The ball cannot come to rest at any point during a volley.

Activity 5: Swimming- Races

- People of all ages and skill levels compete in swimming, and the type of swim meet or swimming event they are entering determines the types and lengths of the races they swim. Swim meets are held in either short-course pools that are 25 meters long, or long-course pools that are 50 meters long. Open-water swimming events are held in lakes, rivers or oceans, and the distance of the races can vary from 500 meters or less up to 8km or longer. Competitive swimming features four strokes -- freestyle, breaststroke, backstroke and butterfly. One race, called the **individual medley**, involves swimming all four strokes in a particular order -- butterfly, backstroke, breaststroke and freestyle. Individual medley, races can be from 100 to 400 meters. Races held in **open water** follow a set course typically

marked by large buoys. These are often long races of more than a kilometre or more, and swimmers can use whatever stroke they like. Some competitive races are **relays**. In short-course and long-course pools, relays involve four competitors swimming equal distances one after another in the same lane.

Activity 6: Hockey – grip and dribble

- The **grip** is typically with the left hand at the top of the stick. And then a second V with the right hand just underneath it. They should generally be pointing down the backside of the stick.
- **Dribbling** requires a top left-hand and a lower right-hand grip on the stick while maintaining a wide stance with knees bent and the ball one foot away, all while quickly tapping the ball to move it further down the field. This requires observation skills, ball control, speed, practice, and confidence. Dribbling entails moving the ball while on the go and involves a mastery of control, speed, and constant, fluid motion. The key to dribbling is to touch the ball ever so slightly without losing control and to travel at a comfortable pace so that you can stay in stride as you move with the ball. Dribbling enables players to pass the ball, maintain possession, and move past opponents all in the pursuit of scoring a goal. Dribbling is an essential skill in field hockey, as the game would not be possible without it. The ability to dribble at an incredible speed, with complete control

of stick and ball, makes field hockey a particularly challenging sport.

Activity 7: Soccer – dribble and passing

- In soccer you can do three things with the ball: pass, dribble or shoot. You will only shoot when you are near the goal, you will only dribble when in space or in a 1 on 1 situation to take on a defender. The rest of the time you will pass the ball. The speed and accuracy of your pass, combined with movements off the ball will often determine how many times you get to dribble or shoot. The teacher can implement the following technique exercise to improve dribbling and passing: The first player in the group dribbles the football through the slalom course and passes diagonally from the last cone back to the player on the end line. ... All players follow their passes to their next positions.

Activity 8: Basketball – lay up

- A layup in basketball is a two-point shot attempt made by leaping from below, laying the ball up near the basket, and using one hand to bounce it off the backboard and into the basket. The motion and one-handed reach distinguish it from a jump shot. The layup is considered the most basic shot in basketball. The layup is a two-point, one-handed shot an offensive player takes in close range of the basket. A player has a higher chance of making a successful layup than they do a shot farther from the basket due to their close proximity to the hoop. The lay-up provides a player with the opportunity to drive at the opponent's basket, jump close to the target and release the ball safely at the backboard.

Activity 9: Rugby – passing and kicking

- Once again, a reminder that there are many different types of passes in rugby, but the most common passes used are the **basic, spin, and pop pass**. Players should learn these passes and when to use them during play. An additional pass to learn is the **cut-out pass** which is used to transfer the ball past a decoy player to another teammate. In order to destabilise the defensive screen. If a player chooses not to pass the ball to a teammate or run with it, that player may **kick the ball** instead. The kick can travel forwards, but any

teammates in front of the ball at the moment the ball is kicked are out of play until either they retire behind the kicker or are played onside by a teammate.

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

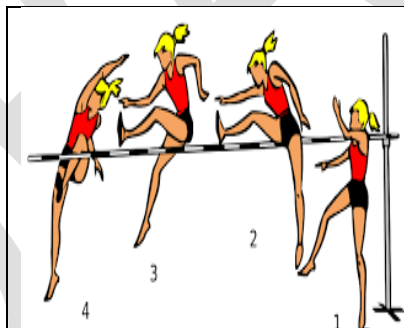

TOPIC: GAMES		WEEK 6-8
SKILL/S	ACTIVITY	
• Coordination • Jumping • Diving • Running • Hitting	INITIAL PHASE: Warm up activity • Joint mobility • Stretching • Preparatory Games/Activities	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills	Year 3: Term 4	
	Activity 1: Athletic Games: Athletics is an exclusive collection of sporting events that involve competitive running, jumping, throwing, and walking.	

Activity 1.1: Track: Sprint

Basic Mechanics of Sprinting

1. Hold your torso straight and vertical.
2. Hold your head still but relax your face and neck.
3. Bend your elbows at 90 degrees.
4. Pump your arms so your hands travel from hip to lip and keep your arms close to your side.
5. As you pump your arms, keep your shoulders steady but relaxed.
6. With each stride, lift your front knee high and straighten your back leg completely to deliver full power.
7. At the start of your sprint, keep your strides short and quick.
8. Lengthen your strides as you gain speed and momentum

Activity 1.2: High jump:

Scissors jump technique

Fosbury jump technique

- The **scissor jump technique** involves the athlete jumping over the bar upright, while lifting both of his legs up over the bar in order to clear higher heights. The **Fosbury flop technique** involves the backward flip.
- The general rule of the high jump is simple. If the crossbar falls off the holder during an athlete's jump, then the jump is considered missed. A

cleared jump is when an athlete jumps over the crossbar, and the bar remains on the holder.

Activity:

RUN UP – Preparing for take-off

TAKE OFF – Period between the run and the take-off

FLIGHT – Travelling in the air

LANDING – Completion of the jump

RECOVERY – Standing on the feet

Step 1:

Practice your running technique.

- When a jumper runs towards the bar they are building the momentum necessary to jump over the bar. Therefore, you need to perfect the running technique before you attempt to jump over anything. Practice by running towards a gymnastics mat and behaving as if there was a bar in front of it. This is the same kind of mat that will be behind the bar when you're ready jump over it.

Step 2:

Prepare to run towards the mat.

- Most jumpers only take about 10 strides before they jump over the bar, so make sure you're at least ten paces away from the mat to simulate this. If you're a beginner step even further back about 5 to 6 strides to give yourself plenty of room to gain momentum.

Don't stand directly in front of the mat.

Step 3

Begin running.

- Use your non-dominant foot to push off. Some athletes start low to the ground and will be in an upright position by stride three. Do what is most comfortable for you, but while practicing it may be easier to start standing up.
- Do not accelerate or decelerate. Maintain a consistent speed so your momentum is not lost.

Step 4

Jump towards the mat.

- This can also be called a “push off.” Push off into the air with the non-dominant foot. The non-dominant leg will automatically be extended as the learner jumps and you will drive up your opposite knee.
- Don’t land on the mat. Instead, land on your feet. At this point you are just practicing the running form. However, the mat will help to catch you if you accidentally fall

Step 5

Clear the bar:

- The technique called the Fosbury Flop, requires leaping head first, with your back to the bar. It is now the most common technique among professional jumpers.

Step 6

Prepare to launch yourself over the bar.

- Fosbury flop requires you to drive your knee up and push off from your non-dominant leg, pivot your body to face the sky. This may feel unnatural

the first few jumps but keep practicing until it becomes second nature.

Step 7

Clear the bar.

- Tilt your head and upper back toward the mat. Angle your head back and keep your chin untucked as you clear the bar to avoid injury. Arch your back up. As you arch and lift your hips over the bar, your head will fall back. After your hips have cleared the bar you will naturally tuck your head to your chest to help lift your feet over.
- Lift your feet up and over. Timing is critical here as there may only be a small amount of clearance for getting your legs over the bar. As your hips cross the bar and come down, give your legs a quick kick up and over to clear the bar.
- Try to keep your arms close to your body for a more solid centre of gravity

Step 8

Land on the mat properly.

- Touch the mat with your upper back first. After clearing the bar you'll want to land on your upper back and shoulders to avoid injury. The rest of your body will follow and it may feel right to let the movement turn into a backward tumble. If so, relax and try to roll into the tumble.

Step 9

Resist the reflex to curl up.

- Keep your body open so that you don't smash your knees against your face. If you hit the bar, cover your face with your arms while landing to prevent being injured by the bar

Step 10

Improve your jump height and form.

- Practice jumping and landing until you're completely comfortable with it. To improve, raise the bar in increments of 3 centimetres.

Step 11

Clear the bar using scissor jumps.

- A simple, less complicated jump called a "scissor jump" is done by following the same run path. Instead of flinging yourself backwards over the bar, you cross over the bar in a sitting position with your back straight and your legs extended in front of you.

Step 12

Push off from the ground.

- When you practiced running, you jumped by pushing off with your non-dominant leg and thrusting your dominant knee into the air. This time, push off with your non-dominant leg but swing your dominant foot into the air, keeping your leg straight. You should be bent at the waist as if you're sitting on the floor, and your foot should never be higher than your hips.

- When you jump your body should be parallel to the bar. You will be jumping in a “sideways” motion that will carry you over the bar.

Step 13

Complete the jump.

- Swing your non-dominant leg up towards your extended leg, keeping both legs straight. This will create a motion similar to scissors closing; thus, the name “Scissor Jump.” Keep your back straight and your legs extended in front of you.

Activity 2: Water activities:

Activity 2.1: (Giant steps, dive to fetch colour disks)

1. Set water safety officers in the swimming pool at about waist depth with a rescue tube (depths will changer per age group).
2. Six - eight learners start out in shin depth water lying on their stomachs.
3. On the command, learners are to run with giant steps towards the beacon, when they reach the beacon, they have to duck dive through the towards their water safety officer.
4. Once they reach the water, the safety officer they must place one hand on the tube and the other in the air to signal that they are finished.

Activity 2.2: Duck Diving Race (Flat water)

Option 1:

In flat water the learners can duck dive parallel to the shallow side of the swimming pool diving through hoops.

Option 2:

The teacher throws different colour disks in the shallow side of the swimming pool. On the whistle the group of learners need to dive into the water and find as many colour disks as they can with the diving and breathing techniques that they were taught.

Activity 2.3: Ring-a-ring-a-rosie

A pocket full of posies

A tissue, a tissue

We all fall down

The king has sent his daughter

To fetch a pail of water

A tissue, a tissue

We all fall down

The robin on the steeple

Is singing to the people

A tissue, a tissue

We all fall down

The wedding bells are ringing

The boys and girls are singing

A tissue, a tissue

We all fall down

Playing "Ring a Ring a Rosie (Ring Around The Rosie) is a simple activity to encourage cooperation and fun. One person is standing in the middle, and the other persons form a ring and dance around this person. When the song has finished (on the final word

"down"), all persons in the ring should lay down on the ground. The slowest person (the person inside the circle decides who), is next up to be standing inside the circle. This person is called "Rosie"

Activity 3: Tennis set:

- Mini Tennis Scoring **does not use traditional** tennis scoring 15, 30, 40 etc. Instead, simple numbered scoring is used 1, 2, 3, 4 etc. Players don't change ends (unless there is an obvious advantage, then at every 6-point juncture) If scores are equal at the whistle a deciding point is played
- Mini Tennis is **played on small courts with short rackets and soft balls**. It's just like the real game and gives players the opportunity to have long rallies and play different types of shots. A foam or felt ball is used.
- Timed tennis- max 10 minutes per match. Players don't change ends (unless there is an obvious advantage, then at every 6-point juncture) If scores are equal at the whistle a deciding point is played. Players to finish a point if started when the whistle blows

Activity:

Play tennis set applying all the skills.

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

GLOSSARY

Aerobic Exercise	Steady activity in which the heart can supply all the oxygen the muscles need. Any activity that uses large muscle groups, can be maintained continuously and is rhythmic in nature
Agility	The ability to change direction and position of the body with speed and control.
Balance	The ability to maintain equilibrium when stationary or moving (not to fall over) through the coordinated actions of our sensory functions
Balance – Static	The ability to retain the centre of mass above the base of support in a stationary position
Balance – Dynamic	The ability to maintain balance with body movement
Bench Press	Lay on bench, flat on back. Press weight-bar from chest to full extension
Bleep test	The test to measure cardiovascular endurance
Body composition	Body composition is the amount of fat tissue in the body
Body mass index (BMI)	How to measure body composition – skin fold test
Cardiovascular Endurance	The ability to keep working for long periods of time without getting tired (fatigue). Cardio-respiratory endurance is the ability of the body's circulatory and respiratory systems to supply fuel and oxygen during sustained physical activity.
Control	The ability to control the movement of the body in co-operation with the body's sensory functions, e.g. catching a ball (ball, hand and eye co-ordination)
Co-ordination	The ability to move one or more body parts at the same time There are a number of different types of skills: • Cognitive or intellectual skills that require thought processes • Perceptual – involving interpretation of presented information • Motor – involving movement and muscle control

	Perceptual motor – involving the thought, interpretation and movement skills A learner tossing a ball into the air and striking it with a racquet or hand
Circuit Training	Training that uses a circuit of exercises around a number of different workstations. Perform each exercise a certain number of times (10 reps) or for a certain length of time (60secs)
Cool-down	A cool-down activity brings the mind and the body back to a relaxed state. Helps to reduce the risk of injury.
Core	Muscles in your abdomen and back that are attached to your spine and pelvis. Core strength refers to the strong muscles around your torso
Core exercises	Abdominal crunches, sit-ups and push-ups
Dance	Taking a series of rhythmical steps (and movements) in time to music
Elevation	Elevation is the upward movement of structures of the body, e.g. elevation of a shoulder joint raises the corresponding arm vertically upwards
Endurance	Endurance means the general ability to do any kind of physical activity that increases the heart rate. Endurance exercises improve the health of your heart, lungs, and circulatory system
Exercise	Purposeful physical activity that is planned, structured and that improves or maintains personal fitness
Fairness	Fairness within physical education: - Taking turns - Sharing equipment and apparatus - Recognising and accommodating the different abilities of their peers - Accepting anyone can take part regardless of their race, religion, gender or sex
Fine Motor Skills	Fine motor skills refer to the coordination between small muscle groups, like those in their hands, wrists, and fingers in coordination with their eyes

Fitness: Health-related	Cardiovascular endurance, muscular strength, muscular endurance, flexibility and body composition
Fitness: Skills-related	Agility, balance, speed, power, reaction time, coordination
Flexibility	Flexibility, mobility and suppleness all refer to the range of limb movement around joints
Formations	Formations in the PE class are about maximising space, utilising activity design and using layouts that will arrange learners in ways that will enhance teaching, learning and participation. Formations: lines, rows, circles, semi-circle, dispersed, individual, paired, seated etc.
Frequency	How often you do the activity
Fundamental movement skills	Fundamental movement skills (FMS) are the basic movements traditionally associated with physical activity. The most common FMS include running, jumping, throwing, catching, skipping, and hopping. It involves different body parts such as feet, legs, trunk, head, arms and hands
Gallop	A two-beat stride during which both legs are off the ground simultaneously, either right foot stays back and left foot is forward or left foot stays back and right foot is forward, toe-to-heel
Games	A game is an activity or sport usually involving skill, knowledge, or chance, in which you follow fixed rules and try to win against an opponent
Gross motor skills	Gross motor skills involve the large muscles in the arms, legs and torso. Gross motor activities are important to everyday physical activities like walking, running, throwing, lifting, kicking, etc.
Health	Is a state of complete physical, mental and social well-being
Hopscotch	A popular playground game in which learners toss a small object, into numbered pattern of rectangles outlined on the ground and then hop or jump through the spaces and retrieve the object. It is a game that can be played with several learners or alone. Hopscotch is a physical and cognitive workout

Indigenous games (traditional games)	Are recreational activities that originated from a particular cultural group or community. Some of these games have become very competitive
Invasion games	Teams score when they move an object (ball) into the opposing team's zone and successfully attack that team's goal or target area. Tactical problems related to invasion games include maintaining possession, attacking and/or defending a goal, winning the ball, etc. Examples of invasion games include netball, basketball, football, rugby and hockey
Joint mobility	Joint mobility refers to the movement around a joint. Having a full range of motion means you have healthy joints. However, if you have difficulty with your range of motion, it could indicate an underlying problem or be the result of an injury
Loco-motor skills	Motor skills in which the feet move the body from one place to another (Walking, Running, Hopping, Jumping, Skipping, Galloping, Sliding, Leaping)
Lunge	A lunge can refer to any position of the human body where one leg is positioned forward with knee bent and foot flat on the ground while the other leg is positioned behind.
Manipulative skills	Movement skills that require an ability to handle an object or piece of equipment with control. They include skills such as kicking, striking, dribbling or catching a ball. Can also be referred to as 'object control skills'
Midline crossing	Crossing the midline happens when your child moves their hand or foot across this line to work on the opposite side of their body. Before crossing the midline happens, a child will typically use only one side of their body at a time.
Modified sport	It can take various forms but are generally designed to be an introductory or more accessible version, of a sport. The sport is adapted to allow for people with mobility issues or different skill levels to participate. Modify the equipment and rules of the sport to match the developmental stage of the learners e.g. mini-volleyball, mini-cricket etc.

Muscular strength	The ability to exert a large amount of force in a single maximum effort
Muscular endurance	The ability of the muscles to perform physical tasks over a period of time without becoming tired (fatigue)
Non-loco-motor movement	Non-loco-motor skills are fundamental body movements that do not involve travelling. They are stability skills that include movements of limbs or body parts, and sometimes even the whole body. There are many different non-loco-motor movements, including: bending, stretching, lifting, raising, twisting, turning and rotating
Obstacle course	An obstacle course is a series of challenging physical obstacles an individual or team must navigate, usually while being timed. Obstacle courses can include running, climbing, jumping, crawling and balancing elements with the aim of testing speed, endurance and agility
Physical Literacy	Individuals who are physically literate move with competence and confidence in a wide variety of physical activities that benefit the healthy development of the whole person
Posture	The position in which someone holds their body when standing or sitting. To improve posture regular exercise and stretching is important
Power	The ability to produce a large amount of force in one action. To undertake strength performances quickly
Press-up	Start in a high plank position with your palms on the floor at shoulder width. Keeping a tight core, bend your elbows, descending until your chest grazes the floor. Push yourself back up while exhaling, maintaining a straight back.
Reaction time	The time between the presentation of a stimulus and the onset of movement
Recreation	An activity done for fun (enjoyment)
Relay	A race between teams in which each team member covers a certain part of the course (normal exercise, athletics, swimming)
Respect	Respect within physical education:

	• Caring for equipment and apparatus • Celebrating others' successes, including of opponents • Listening to teachers' instructions • Listening and responding to others' ideas • Understanding everyone has a right to take part regardless of ability
Rotation	Rotational skills range from simple leaps with turns to more complex acrobatic manoeuvres and artistic flight elements with rotations about the body axes
Safety	Safe practice should be an integral part of all aspects of physical education and sports, at all ages and levels of ability. Accidents do happen, as the nature of physical activities leads to a greater potential risk
Shuttles	A physical exercise, drill or endurance activity involving repeated runs/sprints to and fro, between marked points or lines
Sit ups	Lie flat on your back with fingertips behind your head, knees bent, legs together and feet flat on the floor. Elbows should be in line with ears. Raise upper body until you are upright -one should feel the abs tighten
Speed	Speed, as it will be defined in PE, is the rate (time) at which a person or object moves
Sport	An activity involving physical exertion and skill in which an individual or team competes against another or others for entertainment. The Sport is usually governed by a set of rules, which serve to ensure fair competition and allow consistent adjudication of the winner
Squat	A squat is a strength exercise in which the trainee lowers their hips from a standing position and then stands back up. During the descent of a squat, the hip and knee joints flex while the ankle joint dorsi-flexes; conversely the hip and knee joints extend and the ankle joint plantar flexes when standing up.
Squat jumps	Start standing with feet hip distance apart and lower into a squat position by bending the knees. Keep the spine straight, chest lifted, and knees behind toes. Arms are in front of the chest for

	balance. Jump straight up and swing arms overhead. Return to squat.
Star jumps Jumping jacks	Physical jumping exercise performed by jumping to a position with the legs spread wide and the hands going overhead, sometimes in a clap, and then returning to a position with the feet together and the arms at the sides
Strength	The ability of a muscle or muscle group to overcome a resistance
Stretches	Stretching is a form of physical exercise in which a specific muscle or tendon is deliberately flexed or stretched in order to improve the muscle's felt elasticity and achieve comfortable muscle tone. The result is a feeling of increased muscle control, flexibility and range of movement
Target games	Target games are those in which players send an object (a ball or dart) towards a target area. Sometimes this may also involve avoiding obstacles, defending, guarding or blocking the path of the opposition's ball to stop them from scoring
Technique	A technique is the way of performing a skill
Torso	The main part of your body, not including your head, arms and legs
Warm-up	A warm-up should involve a gradual increase in the heart rate and breathing rate, a slight rise in body temperature, and prepare the mind and the body for physical activity. Helps to reduce the risk of injury.
Water safety	Always swim with a partner. • Know your limits • Swim in safe areas only • Swim parallel to the shore • Be careful about diving • Watch the sun • Drink plenty of liquids • Avoid getting too cool • Alcohol and water never mix
