YEAR 3 – TERM TWO

NAIL TECHNOLOGY

learner name _____

Date: _____

SILK AND FIBRE

Preparation of nail plate

Natural **nail preparation** is the **most important part** when doing nails before applying any nail system, whether it is gel, acrylic, gel polish, fibre or silk. /

Unfortunately this most important step is often neglected/

It is not only about proper product application, but proper preparation.

- ♥ Improper nail preparation causes nail damage, for example; over excessive buffing of the nail bed.
- ♥ Proper nail prep is very important.
- ♥ Preparation is the removal of cuticle on the nail bed and the proper cleaning of the nail plate from oil.
- ♥ Buffing only means to remove the shine from the nail plate, not causing nail damage by over buffing.

Introduction

Fibre and silk nails are nail-sized pieces of cloth (fibre/silk) that are bonded to the top of the nail plate with nail glue.

It's used to repair or strengthen natural nails or nail tips.

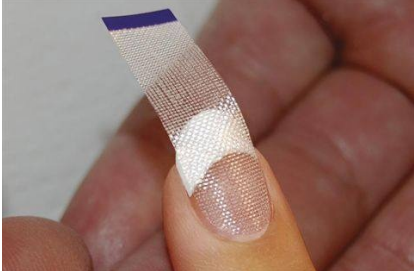

Fibre and silk can be removed with acetone or non-acetone for this reason, fibre and silk nails are temporary and must be reapplied when polish is removed.

Materials and equipment needed for fibre and silk nails

1. Manicure table
2. Basic manicure items
3. Silk/fibre
4. Bonding agent (glue)
5. Small scissors
6. Block buffer

TOOLS, EQUIPEMENT AND WORKING AREAS

	
Cuticle nipper	Cuticle pusher
	
Nail brush	Manicure bowl
	
Emery board	Towels
	
Nail scissors	Work station

	
Silk	Nail glue

Nail preparation for fibre and silk nails

1. Do the pre-service sanitation procedure
2. Wash implements
3. Rinse implements in clean warm water
4. Completely submerge implements in disinfectant solution
5. Wash hands with warm water and liquid soap
6. Rinse implements with warm clean water and dry with a clean towel or disposable towel
7. Follow approved storage procedure
8. Sanitize the table
9. Disinfect surface
10. Wrap client's cushion in a clean towel
11. Refill disposable material.
12. Use sanitizing hand wash
- 13. NOW YOU ARE READY TO BEGIN YOUR SERVICE!**

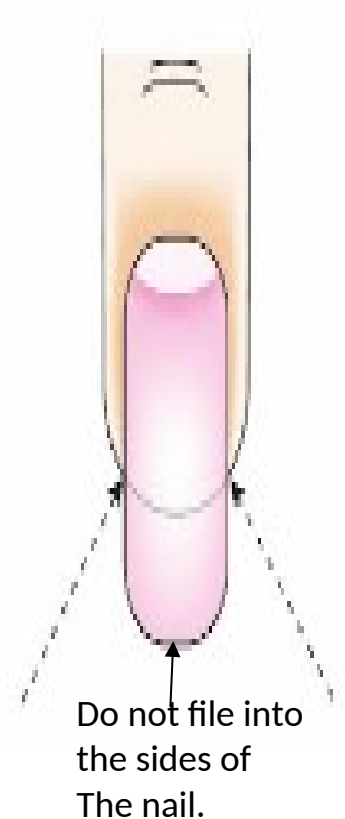

DO NOT use a coarse grid file on the nail bed, because you will remove too much of the nail plate leaving nails thin and fragile. This can cause great damage to the natural nails

Step-by-step guide to prepare the nail plate before product application:

1. Start by shaping the natural nails with a 24 grid (soft) file.

IMPORTANT TIP

- Do not file into the sides of the nail wall
 - Always remember that the sides of the nail give the nail plate its support.
 - If these sides are filled away
 - It gives the nail a narrower appearance
- ↓
- the support is lost, and
 - the nail is weakened

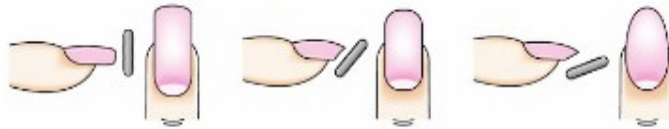

2. Gently push back the cuticles with a cuticle pusher
Remove stubborn cuticle debris with a ruby stone
- 3.
- Moving in small circular motions around the cuticle area on the nail bed, gently remove any remaining cuticle.
- 4.

- Take care removing debris in the corners and sidewalls
- Cuticle debris left on the nail bed will cause product lifting

If you have done a wet manicure, allow the nail bed to dry completely before product application

Natural nails absorb water easily and this prevents good adhesion of the product

5. Gently buff the nail bed by stroking (bevelling) the buffing block over the nail to remove the shine/

6. Remove dust and oil from the nail bed with nail prep and cotton wool. Properly wipe nails clean and allow the nail bed to dry completely before product application

STEPS TO FOLLOW:

1. Set up standard manicuring table. Add fabric. Nail glue, small scissors and nail block buffer to your table.
2. Greet your client and ask her to wash her hands with liquid soap and warm water. Dry hands with clean or disposable towel.

3. Do client consultation, using client health record card form to record the responses and your observations. Check for nail disorders. Decide if client's nails and hands are healthy enough for you to perform a service.
4. If the client have a nail or skin disorder and should not receive a service explain the reason and refer the client to a doctor. If you proceed with the service discuss your client's needs and wants.
IT IS NOT ADVISABLE TO CONTINUE.

5. Now you can start with your steps to do the silk/fibre procedure.

Lesson1:

Date: _____

1. Name the most important part when doing nails before applying any nail?

2. Why should a nail technician not use a coarse grid file on the nail bed?

3. What can improper nail preparation causes?

4. Why should a nail technician not file into the sides of the nail wall when shaping clients nails?

- _____
- _____
- _____

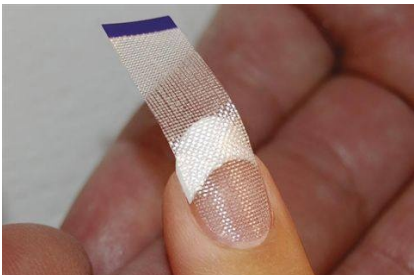

5. What can happen if all the debris around the cuticles is not removed

6. The natural nails should be shaped with a -grid file

LESSON2:**DATE:** _____

1. Name all the equipment that is needed for Silk and Fibre.

2. Name materials and equipment needed for fibre and silk nails.

1. _____
2. _____
3. _____
4. _____
5. _____
6. _____

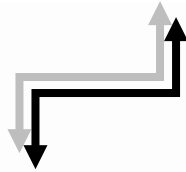

3. What is the important tips to follow when filling the nails.

1. _____
2. _____
3. _____
- _____
- _____
- _____

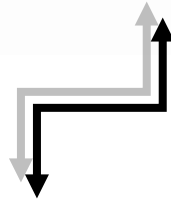

Draw the picture indicating that you must not file on the sides of the nail.

Date:

Hygiene in the Nail Industry

Hygiene is one of the most critical aspects in the **nail care** industry. An effective sanitation method prevents the spread of infections between clients and also contributes to the health and safety of the **nail technician**.

Guideline for Cleaning and Disinfecting Manicuring and Enhancement Equipment

Methods of Proper Cleaning

- ♥ Proper cleaning requires **liquid soap**, water and the use of a clean and disinfected scrub brush to remove all visible debris and residue.
- ♥ All items should be **scrubbed** with a clean and disinfected scrub brush under running water.
- ♥ Cleaning is **not disinfection**; disinfection is an entirely separate step.
- ♥ Different items are cleaned in **different ways**. This often depends on what the item is made of and how it was used.

NOTE: the cleaning step must be performed before disinfection. All items must be thoroughly rinsed and dried with clean cloth or paper towels prior to putting them into a disinfectant.

Cleaning (sanitation)

Method

Scrub Brush

Acetone Soak

Washing machine

Examples

Nail files & Buffers

Metal pushers & nippers/

Cloth towels & linens (bed cover)

Towelette/Wipe

Electrical equipment & table tops

Methods of Proper Disinfecting

- ♥ After proper cleaning, all reusable implements/tools must be **disinfected** by complete immersion in an appropriate disinfecting solution
- ♥ The item must be completely **immersed** and soaked for +- **10 minutes**.
- ♥ **Remove** items after the required time, if required by the instruction label, **rinse** thoroughly in running water..
- ♥ Allow items to **air dry** completely by placing them on top of a clean towel and covering them with another clean towel
- ♥ It is recommended to **spray** 60-90% ethyl alcohol on clean, porous nail files and buffers to disinfect them. A contact time of **5 minutes** is sufficient for proper disinfection.

Lesson 2:

Date : _____

1. What is the definition of “hygiene”?

2. Fill in the missing words with regards to methods of cleaning?

- a) Different _____ are cleaned in different ways.
- b) All items should be _____ with a clean and disinfected scrub brush under _____.
- c) All items must be thoroughly _____ and _____

3. Draw/find pictures of cleaning materials used in a salon and explain what they are used for.

- 1.

- 2.

- 3.

- 4.

DATE : _____

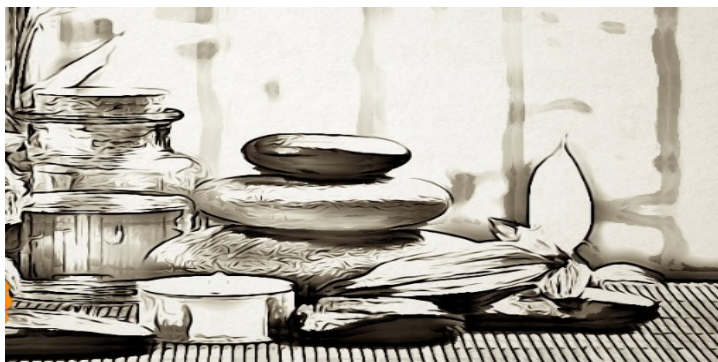

Prepare yourself and the working area

Taking into account health and safety requirements Lighting

- ♥ Ventilation
- ♥ Climate control
- ♥ Monitoring of music & noise levels
- ♥ Ambience
- ♥ Work space
 - Clean and tidy
- ♥ Hygienic – sterilisation, sanitisation
- ♥ Methods of waste disposal
- ♥ Personal work space
 - Seating and nail desk

Position of

- ♥ Trolley
- ♥ Nail station
- ♥ Chair
- ♥ Therapist stool

Consult with client prior to nail enhancements

- ♥ Questioning - lifestyle, occupation
- ♥ Listening skills
- ♥ Visual - carry out skin and nail analysis
- ♥ Skin types - normal, dry
- ♥ Skin conditions - mature, pigmentation, moles, scar tissue, dehydrated
- ♥ Nail condition - brittle, damaged, bitten, weak, oily, ridges, split
- ♥ Nail shape - oval, square, square oval, round
- ♥ Client records/update records - previous service results, client signatures
- ♥ Discuss design objectives and required finish

CONTRA INDICATIONS

Inspect client hands and nails to identify contraindications

Contra indications which PREVENT treatment

- ♥ Fungal infection
- ♥ Bacterial infection
- ♥ Viral infection
- ♥ Severe nail separation
- ♥ Severe eczema
- ♥ Severe psoriasis

Conditions which RESTRICT treatment /

- ♥ Broken bones and sprains
- ♥ Recent scar tissue
- ♥ Allergies
- ♥ Open wounds
- ♥ Diabetes
- ♥ Skin disorders
- ♥ Undiagnosed lumps and swellings

(Jaundice, thyroid, psoriasis etc.)

YELLOWING OF NAILS

Things Your Nails Tell About Your HEALTH

(chronic iron deficiency)

SPOON NAILS

(Low red blood cell count, anemia etc.)

PALE AND DULL NAILS

(cardiovascular disease, pulmonary diseases etc.)

CLUBBING OF THE NAILS

(Fungal nail infection, nail psoriasis etc.)

CRACKED AND SPLIT NAILS

(uncontrolled diabetes, circulatory diseases etc.)

HORIZONTAL DEPRESSIONS

LESSON3:

DATE: _____

1. When working with clients we need to show good manners. Complete the following table by matching the correct answer with the correct statement.

Manners Match the question with the correct response	
1. What should you say if you walk in front of someone?	<i>Are You Ok?</i>
2. Letting someone use something you are using is called?	<i>I'm Sorry!</i>
3. When you ask for something you say?	<i>Respect</i>
4. When you receive something you say?	<i>Nice to Meet You!</i>
5. When you receive a gift you send a what?	<i>Thank You!</i>
6. If your parents ask you to do something, you show them what?	<i>Please!</i>
7. If you make someone else upset or sad, you say?	<i>Thank You Card</i>
8. If someone is having a bad day and you see them upset, you ask?	<i>Sharing!</i>
9. When you meet someone you say?	<i>Excuse Me!</i>

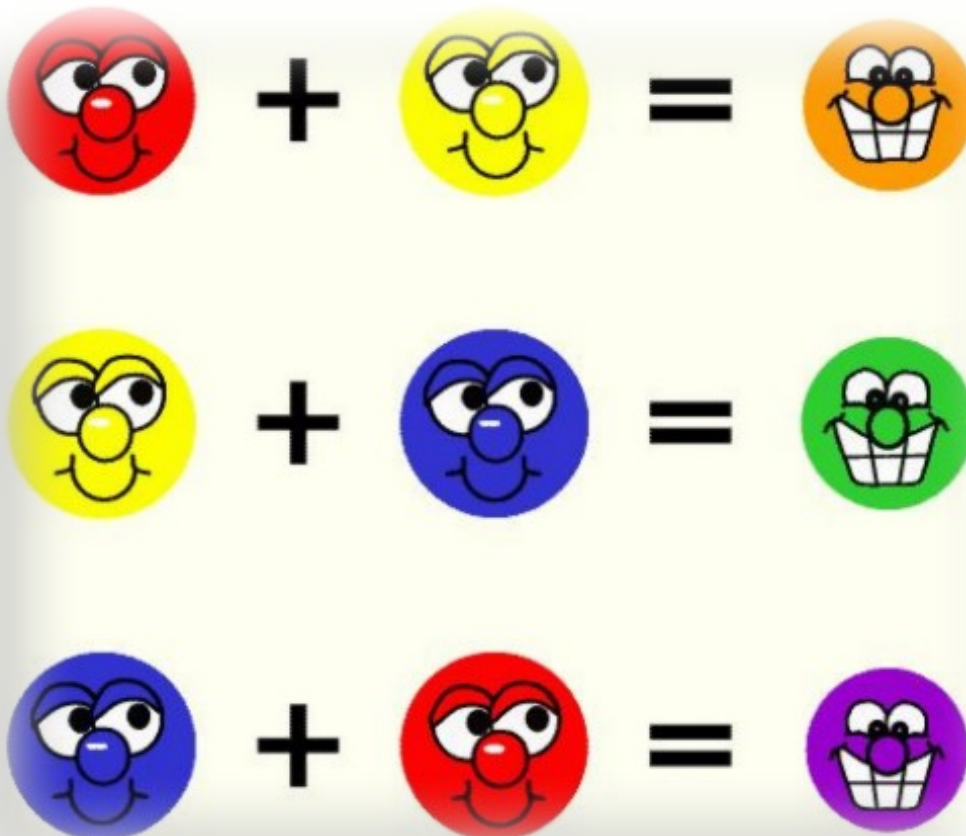

2. Play around with colour and design your own colours.

YOU WILL NEED

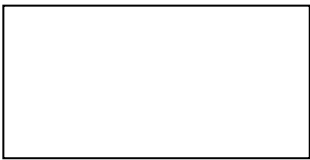

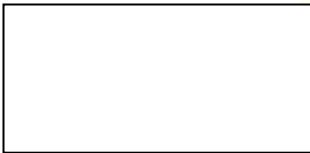

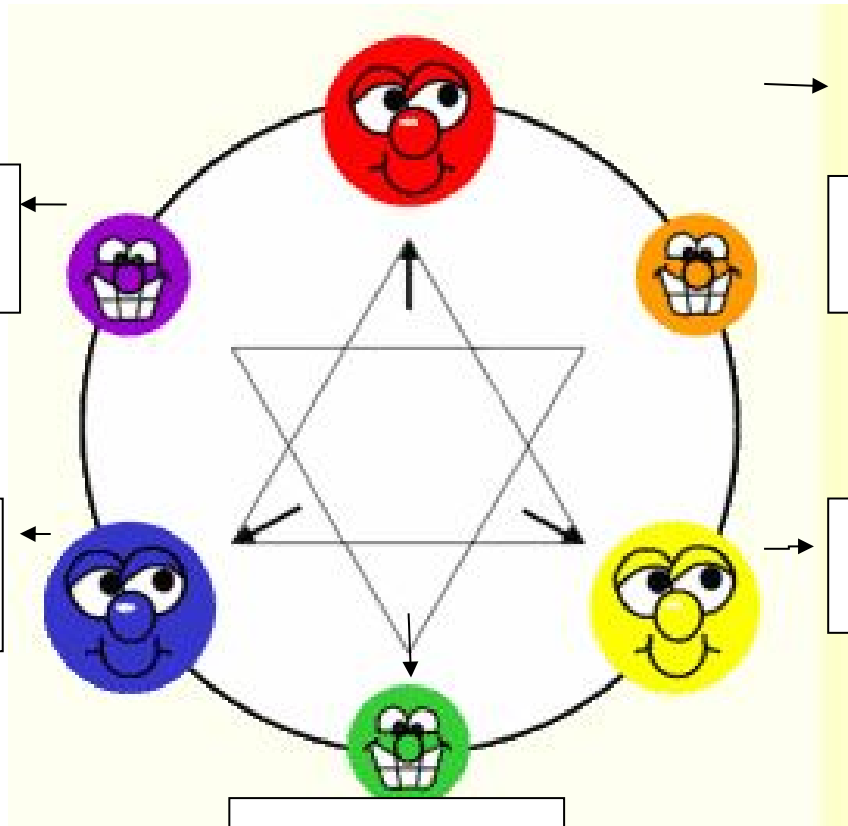

1. A toothpick
2. 2 Nail Colours
3. Make up sponge

1. Paint 2 colours onto a plastic surface
2. Mesh the 2 colours together using a toothpick
3. Dip make -up sponge into the 2 colours and dab onto the paper

Examples of colours

Colour Chart

How to Apply Acrylic Nails – Brush Method

The products you'll need:

- Cuticle Pusher
- Nail File & Buffing Block
- Nail Prep/Dehydrator
- Acid Free Nail Primer
- Dappen Dish
- Acrylic Nail Brush
- Lint Free Wipes
- Acrylic Powder
- Acrylic Liquid
- Top Coat
- Nail Tips
- Nail Glue
- Pure Acetone
- Cuticle Oil
- Manicure Brush

Step 1. Prepping the Nail

Before you start, first, you will need to master prepping the nail!

1. Gently push the cuticle back with your cuticle pusher, ensuring no cuticle remains on the nail bed, as the acrylic will not stick to it.
2. Use a buffing block to remove all shine to the nail by softly swiping left and right over the entire nail bed.

3. Remove dust either with your manicure brush or wipe over with some acetone on a lint-free pad.

Applying a Nail Tip

At this stage, you can apply your nail tips if you're using them, if not, skip to the next section.

1. Pick out the correct sized nail tips that fit your nails snugly and lay them out ready.
2. Apply a small amount of nail glue to the tip where it will meet your natural nail bed.
3. Press and hold the nail tip (with nail glue on) firmly to the nail for about 10 seconds or until you can feel the tip has stuck. If it is lifting at the sides you can use your pinching tool or an angled pair of tweezers to gently hold the wings down.
4. Using nail tip cutters or nail scissors (trickier to use), cut/snip the nail tip to your desired length.
5. File down the nail tip to the shape you would like (e.g almond, square, coffin, etc) don't file upwards from the underneath of the tip though or you may cause it to pop off, you can support the top of the nail while filing to prevent this from happening as well.

If the tip hasn't blended with your natural nail and you can feel a ridge, gently buff over the join with a soft file and get a lint-free pad and apply a small amount of pure acetone to it. Wipe the pad side to side over the join between the nail tip and your natural nail to make the tip blend in with your nail.

6. Ensure no dust remains from the filing of the tip and apply nail prep/dehydrator to the entire nail bed, this should quickly air dry leaving the nail a slightly white/matte finish.
7. Apply acid-free nail primer to the entire nail bed.

Step 2: Applying the Acrylic

1. Pour your acrylic liquid into your dappen dish.
2. Dip the acrylic brush into the dappen dish and push the brush tip to the bottom of the dappen dish to get the air bubbles out.
3. Swipe the brush on the edge of the dappen dish once to get the excess liquid off.
4. Dip the brush tip into the acrylic powder and stroke the brush through the powder towards you until you create a ball of acrylic (it should look like a tiny golf ball- if the ball is too wet or dry, start again).
5. Press the brush (with acrylic powder ball on) to a lint-free pad to drain the excess liquid off.
6. Apply the ball of acrylic to the top of the nail (near the cuticle) and bring the bead down to the very tip. Tilt the nail down as you are doing this as it will prevent the acrylic flooding the cuticles.
7. Sculpt the acrylic by pressing the brush flat to your nail and gently moving the acrylic to smooth out bumps and to spread it out evenly (remember to keep your brush clean by dipping it into the acrylic liquid while doing this).
8. If you need more acrylic to cover the entire nail, repeat steps 2-7 until you're happy with the coverage of the nail.
9. Wait a little over 2 minutes for the acrylic to dry (it should 'ting' when you tap it- when it's not dry it will sound hollow).
10. File the entire nail until it is smooth on the top and around the edges and to make the shape more defined. (The higher the grit count on the nail file, the smoother the file. i.e 240/240 is smoother than an 80/80 nail file).
11. Now you need to add a top coat to seal in the acrylic. The two steps below show 2 ways of doing this:

If you DON'T have a lamp to dry your acrylics:

- Apply Air Dry Top Coat to your entire nail and leave to dry for about 2 minutes.

If you DO have a lamp:

- Apply Urban Graffiti Top Coat / Mega Gloss or Matte Top Coat (depending on which finish you want).
- Put your hand under the lamp and turn on.
- Leave to cure (dry) for 2 minutes under a UV lamp (or 1 minute for a LED lamp).
- When the time is up, remove your hand.

12. Finish off the look by adding a stroke of cuticle oil to the cuticle area of each nail and rub in with your fingers.
