NAME: _____

YEAR: _____

SENSE ORGANS

SENSES

BRIEFLY DEFINE CONCEPTS

THERE ARE 5 SENSES

There are 5 senses the body has to react on external stimuli. It is important that learners define new terminology

ACTIVITY: Fill in the table below

ORGAN	FUNCTION
1.	1.
2.	2.
3.	3.
4.	4.
5.	5.

(10)

The Five Senses 2

I. Fill in the appropriate group with the right word:

				
see	smell	hear	taste	touch
-----	-----	-----	-----	-----
-----	-----	-----	-----	-----
-----	-----	-----	-----	-----
-----	-----	-----	-----	-----
-----	-----	-----	-----	-----

radio
perfume
gasoline
clouds
chocolate

fur
bird
voice
picture
velvet

flower
apple
feather
photo
spices

pickles
song
smoke
sunset
silk

cheese
bark
cry
soap
satin

II. Use the right verb for each sentence:

smell

touch

see

taste

hear

1. I can.....silk with my hands.

2. I can.....children playing with the ball.

3. I can.....sweet chocolate.

4. I can.....my mother's voice from the kitchen.

5. I can.....smoke in the house.

FIVE SENSES

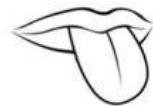

Name: _____ Date: ____/____/____ Score _____

WORKSHEET-1

Complete the sentences by choosing the most appropriate word from the list given below.

tongue, smell, touch, eyes, hear, ears, skin, see, taste,
nose, move, balance

1. I taste food with my _____.
2. I use my eyes to _____.
3. I hear the birds chirping with my _____.
4. I use my skin to _____.
5. I smell the flowers with my _____.
6. I use my tongue to _____.
7. I see the world with my _____.
8. I use my ears to _____.
9. I touch the feathers with my _____.
10. I use my nose to _____.

Name: _____

5 Senses:

Match the 5 Senses on the left that relates best to the pictures on the right.

ANIMALS

-Can sense more than Humans and use their senses adapted for survival

1.Dogs have good sense of smell and can use to determine the direction of an odors

2. Eagles, buzzards, hawks and other birds of prey have extremely sharp eyes as they have to see small rodents from very far away.

3. Elephants, cats and dogs can hear sound that human ears cannot hear

4. The Owl has large eyes to find its food

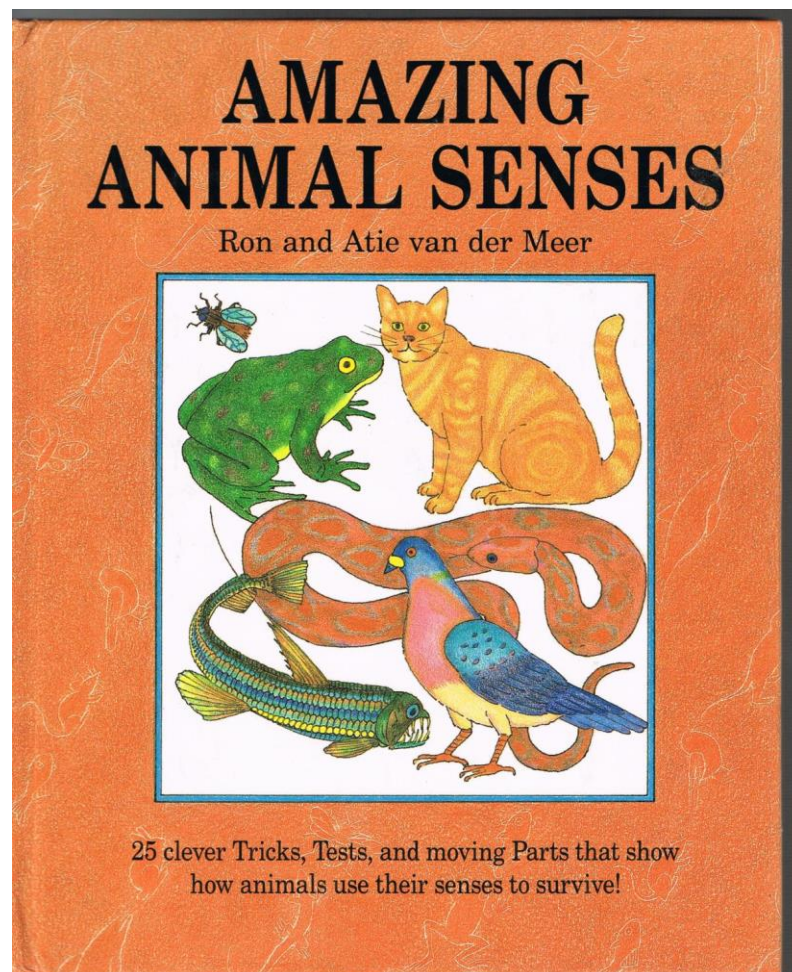

5. Bees also use sight to get nectar

6. Locusts use thin antennae on his head to smell and locate food

7. Zebra has excellent eye sight to see well during the night and day also ears and nose increase chances of sensing danger

8. Meerkat has good eye sight and can see predators clearly

9. The Wildebeest has good sense of hearing

ACTIVITY: INDICATE DIFFERENT SENSES OF THE ABOVE ANIMALS

NAME THE ANIMAL	INDICATE (SENSE) THAT ARE USED
1.	1
2.	2.
3.	3.
4.	4.
5.	5.

Amazing Nature

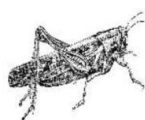

Animal senses

Humans have five senses; sight, hearing, taste, smell, and touch. We use these senses every day of our lives when we work, play, eat, drink. Animals have sense too, and sometimes they are much more powerful than ours. We have our food prepared for us

But animals need to find their own food using their senses. For example, predators often have very good sight. Some birds of prey can see a mouse at a distance of 1.5 kilometers. However, they don't always catch the mouse. Mice have amazingly good hearing and this helps them escape from predators!

Insects sometimes have senses that are different from ours. For example,

butterflies don't taste with their mouths - they taste with their feet. Crickets don't hear with their ears - they hear with their legs. Chameleons have two eyes, the same as we do, but they can move their eyes separately and look in two different directions at the same time! Some animals seem to have special sense that tells them about the future. Birds,

ants and many other animals look for food more busily just before bad weather. This helps them survive because it's more difficult to find food when the weather is bad. They know that bad weather is coming. Birds also use this ability to avoid bad weather when they fly long distances. For centuries, people have noticed that animals often behave strangely before an earthquake. For example, in January 1975, a lot of farmers in one part of China told scientists that their horses and cattle did not want to go inside the barns. A few days later, there was a large earthquake in that region. Do animals have a special sense that predicts earthquakes? The answer is probably yes, but scientists do not yet understand how it works.

Answer the following questions

1. How many senses do humans have?

2. What do animals use to find their food?

3. Which sense do birds of prey use to catch their food?

4. Which sense helps mice to escape from predators?

5. What do butterflies use to taste?

6. What do crickets use to hear?

7. What is special about chameleons?

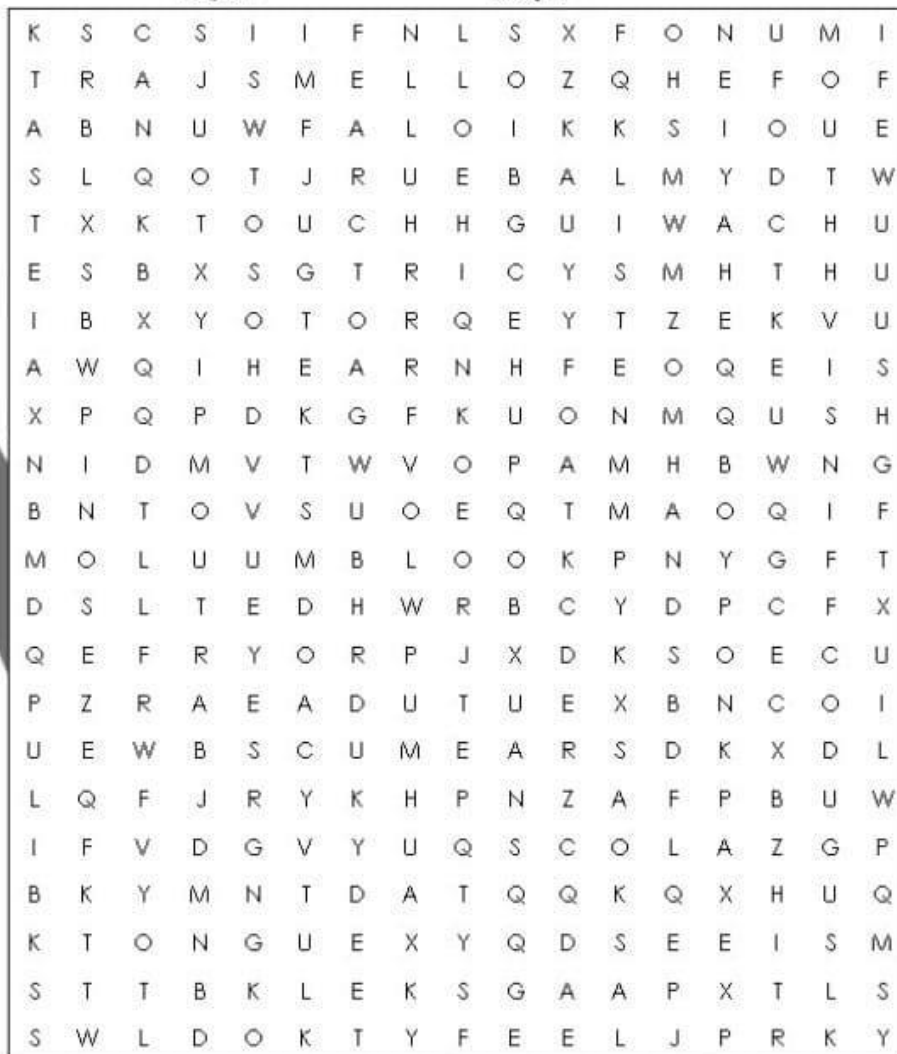

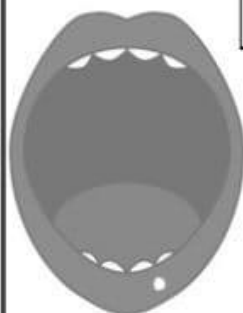

8. Which animals look for food more busily before bad weather?

9. When do they behave strangely?

10. What did farmers tell scientists in China?

TOPIC 2: HUMAN SKELETON

FOLLOWING CONCEPTS NEED TO BE EXPLAINED MUSCLES, THE SKULL, THE BACKBONE, THE RIBS, THE LIMBS, SHOULDER, HIP GIRDLES, JOINTS, PELVIS

Bones that makes up Human skeleton

The skeleton is made up of 206 bones, including bones of the:

1.Skull-including the jaw bone

2.Spine-cervical, thoracic and lumbar vertebrae, sacrum and tailbone(coccyx)

3.Chest-ribs and breastbone(sternum)

4.Arms-shoulder blade (scapula), collar bone(clavicle), humeroradial and ulna

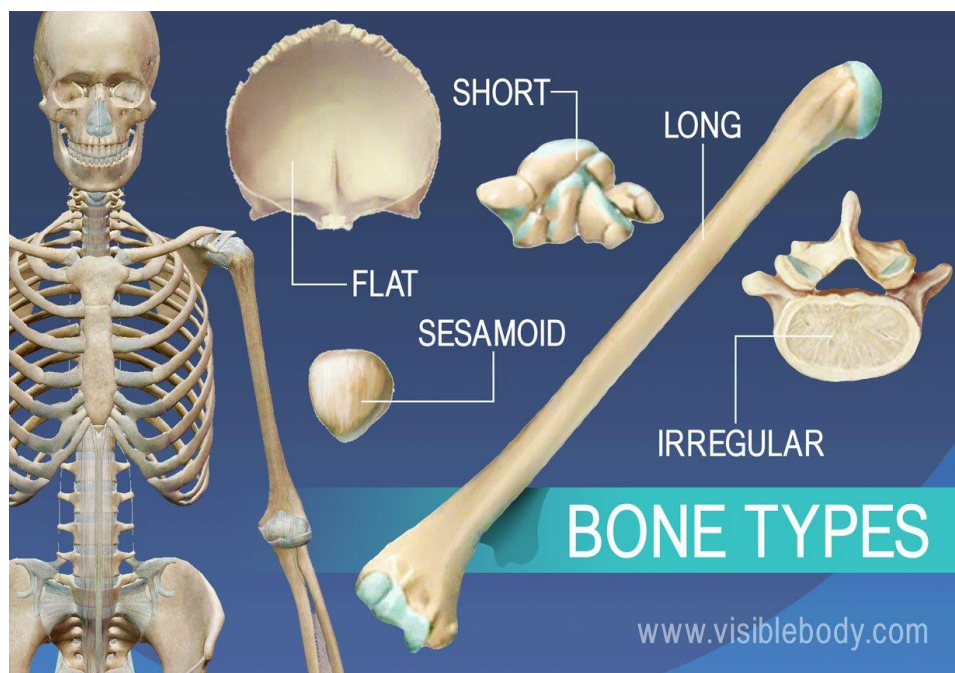

5.Hands-wrist bones(carpals), metacarpals and phalanges

6.Pelvis-hip bones

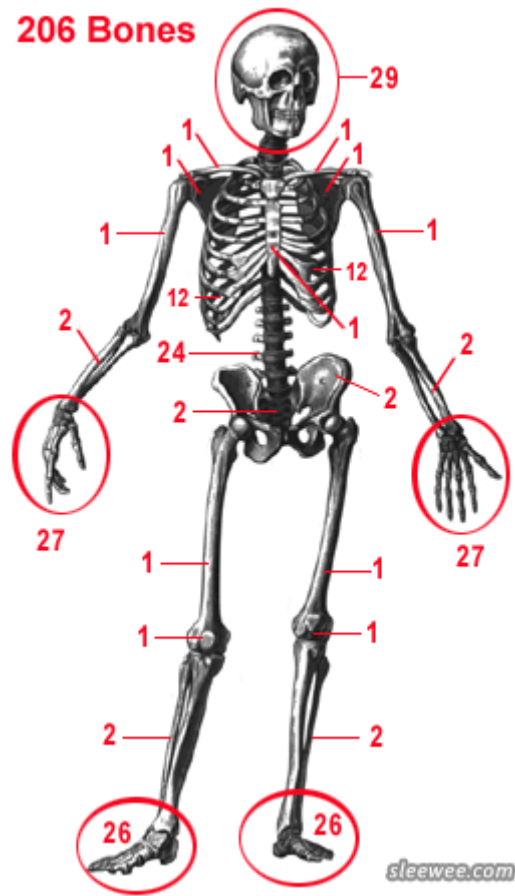

7.Legs-thigh bones (femur), kneecap(patella), shin bone(tibia)and fibula (behind the shin bone)

8.Feet-tarsals, metatarsals and phalanges.

IMPORTANCE OF EATING HEALTHY FOOD TO DEVELOP HEALTHY AND STRONG BONES

The health and strength of our bones rely on a balanced diet and a steady stream of nutrients — most importantly, **calcium** and **Vitamin D**. Calcium is a mineral that people need to build and maintain strong bones and teeth. It is also very important for other physical functions, such as muscle control and blood circulation.

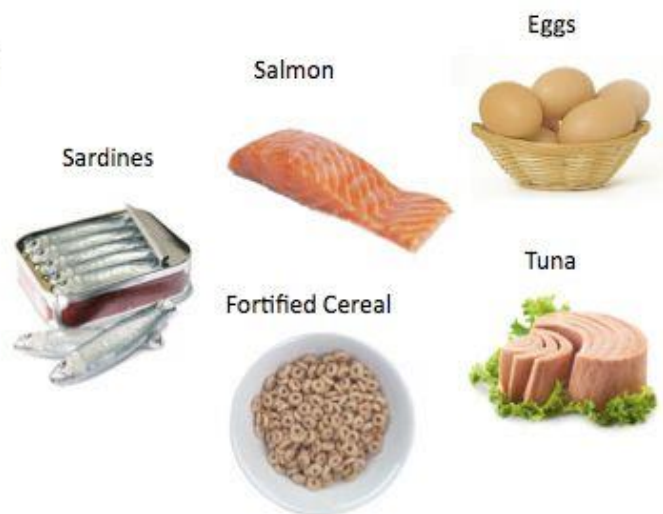

FOOD FOR STRONG BONES

When it comes to building strong bones, there are two key nutrients:

Calcium
supports bones & teeth
structure

Vitamin D
improves calcium
absorption & bone growth

THERAPHY AND CARE FOR BROKEN BONES

Minomax Knee & Shoulder
CLINICS

FIRST AID CARE FOR A BROKEN BONE

- 1. STOP ANY BLEEDING:**
If they're bleeding, elevate and apply pressure to the wound using a sterile bandage, a clean cloth, or a clean piece of clothing.
- 2. IMMOBILIZE THE INJURED AREA:**
If you suspect they've broken a bone in their neck or back, help them stay as still as possible.
- 3. APPLY COLD TO THE AREA:**
Wrap an ice pack or bag of ice cubes in a piece of cloth and apply it to the injured area for up to 10 minutes at a time.
- 4. TREAT THEM FOR SHOCK:**
Help them get into a comfortable position, encourage them to rest, and reassure them. Cover them with a blanket or clothing to keep them warm.

ACTIVITY:FILL IN WORD PUZZLE FOR BONES AND JOINTS

Bones and joints homework crossword

Across

- 2. A bone that helps you chew food
- 7. A material that stops your synovial fluid from leaking.
- 8. A bone that runs down from your head to your hip
- 9. All of your bones together make your _____.
- 10. A joint that connects your head to your body

Down

- 1. A joint that allows your limb to rotate 360o
- 3. A liquid that lubricates joints
- 4. The funny bit of your arm
- 5. A bone that protects your upper vital organs
- 6. A type of joint that is like a door

Name: _____ Subject: Year 4 Science
 Date: _____ Unit: 4a Moving and growing

Fill in the missing spaces with the words from the bones below:

Bones and Muscles

Our skeletons are very useful. They have three functions,

_____, support and _____. The _____

protects our brains, the _____ protect our heart and lungs.

Without our _____ our bodies would collapse.

Our bones are connected by _____. Our knees are joints.

Muscles are attached to the _____ of our skeleton. Muscles

allow our bones to _____ by contracting and _____.

Muscles usually work in _____.

Cartilage protects the bones and allows

them to move _____.

What part of the human body has the most bones?		What bone am I?
a) skull		1) The brain's protector: _____
b) knee		2) The bone joining the wrist to the elbow: _____
c) hands		
d) elbow		
What is the longest bone in the human body?		3) One of the small bones that form the backbone: _____
a) tibia		
b) femur		4) The wide curved bones between the spine and the leg bones: _____
c) fibula		
d) humerus		
Where are the smallest bones in the human body?		5) A bone that sounds like a word meaning 'causing laughter': _____
a) ear		
b) ankle		6) A bone that has the same spelling as the distance from the middle of a circle to its circumference: _____
c) hand		
d) foot		
What words rhymes with "bones"?		

HUMAN REPRODUCTIVE SYSTEM REPRODUCTION

Human reproductive system

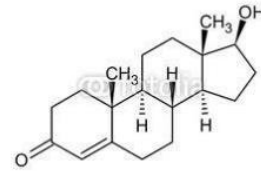

CONCEPTS (SEX HORMONES, EGG DEVELOPMENT, SPERM DEVELOPMENT, MENSTRUAL CYCLE, OVULATION, REPRODUCTION, EGG CELL, SPERM CELLS, REPRODUCTIVE SYSTEM) NEED TO BE EXPLAINED

Sex hormones

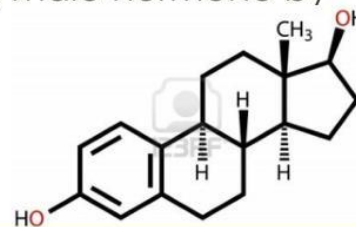

Male- Testosterone

- Promotes growth of genital organs
- Synthesized in testes from cholesterol

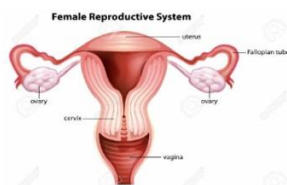

Female- Estradiol

- Synthesized from corresponding male hormone by aromatization of the A ring

FEMALE REPRODUCTIVE SYSTEM

The female reproductive system [or female genital system] is made up of the internal and external sex organs that function in human reproduction. The female reproductive system is immature at birth and develops to maturity at puberty to be able to produce gametes, and to carry a fetus to full term.

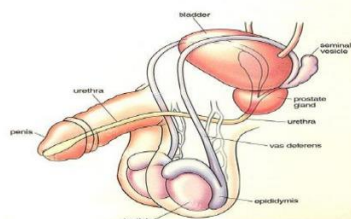

1. Uterus
2. Fallopian Tube
3. Ovary
4. Cervix
5. Vagina

MALE REPRODUCTIVE SYSTEM

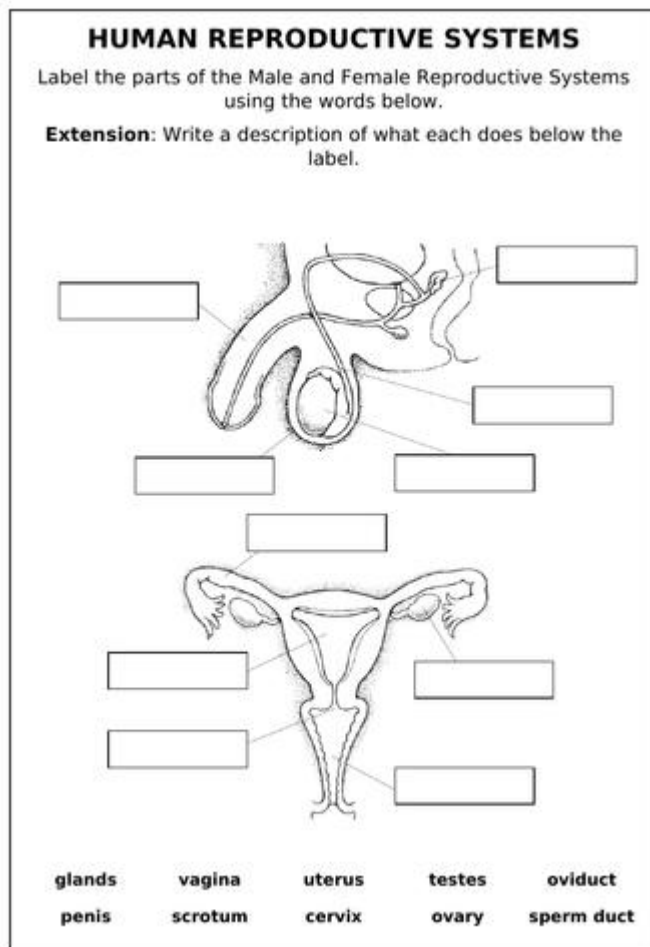

The male reproductive system includes the scrotum, testes, spermatic ducts, sex glands, and penis. These organs work together to produce sperm, the male gamete, and the other components of semen.

Male Reproductive System

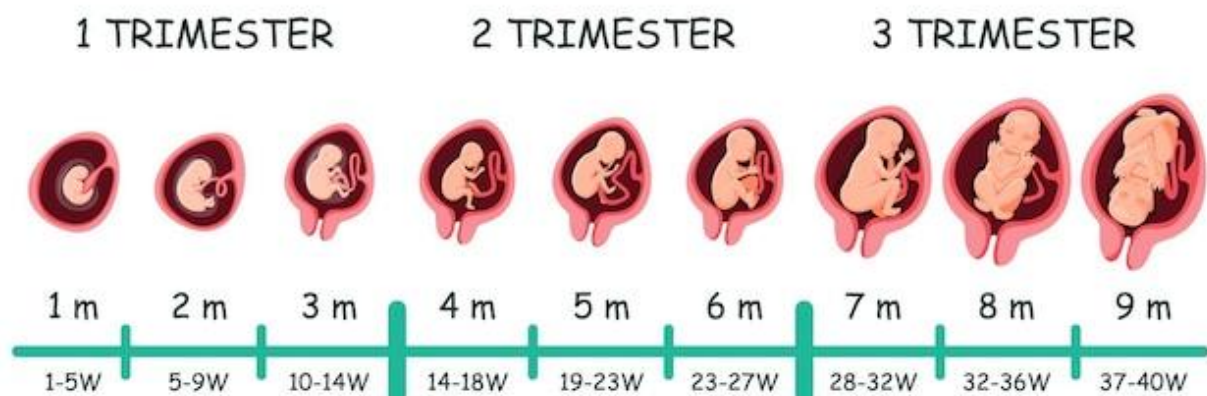

1. Bladder
2. Seminal Vesicle
3. Prostate Gland
4. Urethra
5. Vas Deferens
6. Epididymis
7. Testicle
8. Penis
