LIFE SKILLS OCCUPATION CURRICULUM

Life Skills Occupation deals with the holistic development of the learner throughout childhood. It equips learners with knowledge, skills and values that assist them to achieve their full physical, intellectual, personal, emotional and social potential. The subject encourages learners to acquire and practice life skills that will assist them to become independent and effective in responding to life's challenges and to play an active and responsible role in society. The subject aims to develop learners through four different, but interrelated study areas, that is, Personal and Social Well-being, Physical Education, Creative Arts, and Natural Sciences.

LIFE SKILLS OCCUPATION – PHYSICAL EDUCATION

Physical Education is part of a selection of study areas that make up the Life Skills Learning Programme as specified for the GCE Technical Occupational qualification. It develops learners' physical well-being and knowledge of movement in a safe and developmentally appropriate manner. It encourages learners to use these to perform in a wide range of activities associated with the development of an active and healthy lifestyle. During engagement in this study area, learners will develop motor skills and participate in a variety of physical activities.

OVERVIEW

According to the United Nations, Educational, Scientific and Cultural Organizations (UNESCO) International Charter of Physical Education, Physical Activity and Sport Physical education, physical activity and sport programmes must inspire lifelong participation.

- Physical education, physical activity and sport programmes must be designed to meet the needs and personal characteristics of those practicing them over their whole lifespan.
- Early positive experiences of play, games and physical activities should be prioritized for all so as to lay a foundation of the knowledge, skills, attitudes and motivation necessary for the maintenance of lifelong participation in physical activity and sport.
- As the only area of school curricula concerned with developing students' competence and confidence in sport and physical activity, physical education provides a learning gateway for the skills, attitudes and knowledge necessary for lifelong physical activity and sport; quality and inclusive physical education classes, taught by qualified physical education teachers, should be mandatory in all grades and levels of education.

A Physically Educated Person:

1. Demonstrates competency in many movement forms and proficiency in few movement forms.
2. Applies movement concepts and principles to the learning and development of motor skills
3. Exhibits a physically active lifestyle
4. Achieves and maintains a health-enhancing level of physical fitness
5. Demonstrates understanding and respect for differences among people in physical activity settings
6. Understands that physical activity provides opportunities for enjoyments, challenge, self-expression and social interaction

SPECIFIC AIMS

The subject Life Skills Occupation aims to:

- 1) Guide learners to achieve their full physical, intellectual, personal, emotional and social potential;
- 2) Teach learners to exercise their constitutional rights and responsibilities and to respect the rights of others;
- 3) Guide learners to make informed and responsible decisions about their health and environment;
- 4) Develop creative, expressive and innovative individuals;
- 5) Develop skills such as self-awareness, problem-solving, interpersonal relations, leadership, decision-making, and effective communication; and
- 6) Develop learners' skills to respond to challenges and play an active and responsible role in the economy and society;

ORGANISATION OF THE CURRICULUM

In the Life Skills Occupation curriculum, Physical Education is expressed as a study area containing three topics which are:

- 1) Fitness
- 2) Sport
- 3) Games

The issues dealt with in each topic are related to the issues covered in the other two topics of the subject. Owing to the interrelated nature of the study area, the three topics of Physical Education function interdependently, and therefore, are considered to be of equal importance.

ALLOCATION OF TEACHING TIME

Time for Life Skills Occupation has been allocated in the following way:

- 10 weeks per term, with 1 hour per week;
- Year 1-3 has been designed to be completed within 32 weeks per year
- Year 4 has been designed to be completed within 30 weeks. (30 Hours)
- Year 4: No Physical Education content and activities for term 4
- 8 Hours has been included for assessment per term
- Year 4, Term 3 work will cover 7 weeks with 1 week for revision and 2 weeks for assessment.

Below is the summary of time allocation per topic. The time allocation provides an indication of the weighting of each topic. However, this is the guideline and should be applied flexibly according to circumstances in the classroom to accommodate the interests of the learners.

Topics	Time Allocation
Fitness	11 weeks (11 hours)
Sport	8 weeks (8 hours)
Games	12 weeks (12 hours)
Formal Assessment	8 weeks (2 hours per term)
Revision	1 Week (1 Hour) Term 4

CAPS: TECHNICAL OCCUPATIONAL LIFE SKILL: PHYSICAL EDUCATION

Activities Overview Year 4

TERM	WEEKS	ACTUAL WEEKS	FITNESS	SPORT	GAMES
1	1-3	3	• Crouch start, bullet start, elongated start and 100m relay	• Cricket: Group fielding, Fielding positions • Tennis: Forehand • Swimming: Breaststroke	• Tennis set: Striking the ball across the net, • Discus • Modified cricket: bowling and batting
	4-5	2	• First aid theory: • 10 station circuit training	• Cricket: wicket keeping • Tennis: footwork • Swimming: backstroke	• Traditional games: Dibeke, Kgati Diketo, and Morabaraba • Water activities and relay
	6-8	3	• First aid theory: open fracture practical • High jump: Scissor Technique	• Cricket: catching a high ball • Rhythmic gymnastics • Tennis: forehand • Swimming	Modified Cricket: Batting
	9-10	Assessment			
TERM	WEEKS	ACTUAL WEEKS	FITNESS	SPORT	GAMES
2	1-3	3	• Beanbag relay	• Hockey: dribble • Soccer; passing • Basketball: dodging • Rugby: passing	• Obstacle course • Cops and robbers

				Gymnastic floor sequence	
	4-5	2	50m sprints	- Hockey: long corners - Soccer: trapping - Basketball: passing - Rugby: line out - Volleyball: passing	- Forward running - Lateral running - Dot, L, jump box and agility drills - Lunge - Shuttle runs - Side step toe touch and quick feet - Mr. Wolf
	6-8	3	- Running on the spot - Circuit training	- Soccer: grip and dribble - Basketball: layup - Rugby: passing and kicking - Gymnastics: rhythmic	- Obstacle course - Mini soccer - Mini Basketball - Mini hockey - Touch rugby - Mini netball - Cops and robbers
	9-10	Assessment			
TERM	WEEKS	ACTUAL WEEKS	FITNESS	SPORT	GAMES
3	1-3	3	Blob tag	- Hockey: goal keeping - Soccer trapping - Basketball: overhead passes - Rugby: line out	- Shuttle relay - Mini Netball - Mini Hockey - Mini Soccer - Touch rugby - Mini basketball - Volleyball - Softball
	4-5	2	Paarlauf relay (interval running)	Cricket: Fielding attacking	- Athletics: Sprinting, - Field Discus

				• Tennis: foot positions for backhand • Swimming: leg actions	• Rotation, elevation and balance with partner • Water activities to promote confidence • Traditional games: Hopscotch
	6-8	3	• Cardio exercise workout station	• Hockey: dribble • Soccer: passing • Basketball : layup • Rugby: kicking • Gymnastics: floor sequence	• Obstacle course • Mini Netball: rob the nest • Mini Hockey • Mini Soccer • Touch rugby • Mini Basketball • Gymnastics: shoulder stand and double base elevator • Traditional dance: Pantsula
	9-10	2 weeks for Assessment			

KEY QUESTIONS:

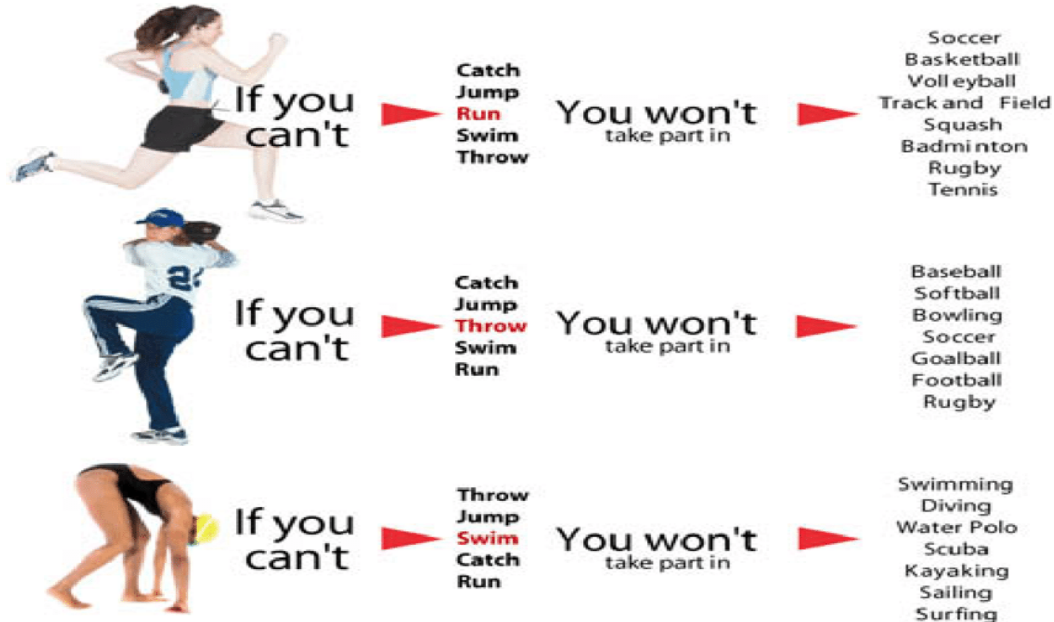

UNIT 1: FITNESS	UNIT 2: GAMES	UNIT 3: SPORT
What is the relationship between fitness, games and sport?		
Physical fitness is a state of well-being with the necessary energy to participate in a variety of physical activities (games and/or sport).		
Games and modified sports offer fun and developmentally appropriate activities that are designed to develop learners' physical fitness and encourage them to participate in the targeted sport , and a wide range of sports in general.		
What are the components of physical fitness?	What are the categories of games?	What are the different types of sport?
Health-related physical fitness components: 1. Cardiovascular endurance; 2. Muscular strength; 3. Muscular endurance; 4. Flexibility; and 5. Body composition.	Target Games in which the learner propels an object, preferably with a high degree of accuracy, at a target. Indigenous Games are recreational activities that originated from a particular cultural group, community or people. These games are different from your mainstream sports, which are regulated by international federations, and have fixed rules	1. Individual sports: Swimming, Athletics 2. Dual sports: Tennis 3. Team sports: Football, Netball, Hockey, Cricket, Rugby 4. Extreme sports: Mountain biking 5. Water-based sports: Water polo, Swimming 6. Land-based sports: Rugby, Football, Netball, Hockey, Cricket, Athletics, Basketball 7. Air-based sports: Skydiving 8. Contact sports: Karate, Boxing

Skill-related physical fitness components: 1. Agility; 2. Balance; 3. Power; 4. Speed; 5. Coordination; and 6. Reaction time.	Net/Wall Games in which the learner propels an object into space trying to make it difficult for an opponent to return it.	9. Non-contact sports: Athletics, Tennis
What is an example of a non-loco-motor skill? • Stretching What is an example of a loco-motor skill? • Running What is an example of a manipulative skill? Throwing	Striking/Fielding Games in which the learner strikes an object so it is placed away from defenders in the field. Territory/Invasion Games in which learners invade an opponent's territory to score.	Team sports can be classified into these four categories: 1. Invasion Games: Netball 2. Net Games: Volleyball 3. Fielding & Striking Games: Cricket 4. Target Games: Golf

3 R's of skill learning: Repetition, Refinement, and Reflection

To effectively participate in fitness, games and sports activities, the teacher must ensure that all learners have the opportunity to perform, repeat, refine and reflect on each locomotor, non-locomotor and manipulative skill introduced to them in its simplest form before combining and applying them in the various settings and in their most complex formats.

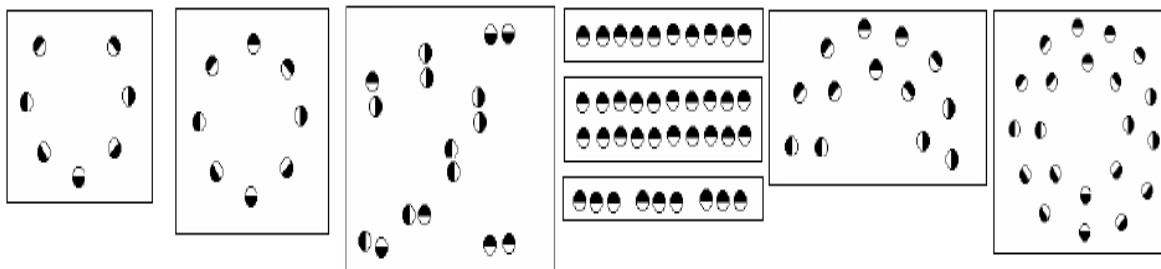

Considerations During The Physical Education Lesson:

- Each learner must have an active role in the Physical Education lesson at all times. That all learners get to play all positions, accumulate the same number of repetitions, and are placed in an enjoyable learning environment.
- The intensity, duration and load of all physical activities should be age and developmental appropriate for all the learners involved.
- Focus should be on the learner's ability to demonstrate a clear understanding of concepts and techniques involved in all three topics.

Formations

Formations, which include learners being in lines, rows, circles, dispersed, individually, paired, seated etc., constitute an important organisational element in the Physical Education class. Formations in the Physical Education class are about maximising space, utilising activity design, and making use of layouts that will arrange learners in ways that will enhance teaching, learning and participation. The

utilisation of the formations should always correspond with the activities to be realised. The teacher must be positioned in such a way that he/she is able to see all the learners in the class all the time, irrespective of the formation chosen.

Safety Considerations

Safety (of task/activity, space and equipment) is an essential element of Physical Education and should be introduced and constantly reinforced throughout all lessons. Despite the fact that safety precautions during a Physical Education class cannot remove all risks, they should and may eliminate unnecessary hazards.

In the event of water and gymnastic activities, which have been chosen, safety needs to be taken into consideration **at all times**.

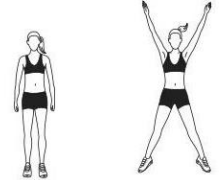

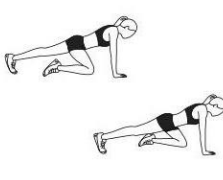

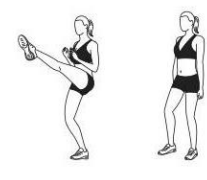

Water Safety	Gymnastic safety
	
Precautions: • Check the weather and the tides before you leave home if you are going to swim in the sea. • Only enter where the waves are straight and gentle. If you experience a strong current, get out of the sea, or at least do not go in deep. • Never swim while you are intoxicated. • Buddy up! Always <u>swim</u> with a partner • Enter the water feet first as a rule.	Support/assistance practical: • Always warm up and stretch before doing gymnastics. • Only practice on padded floors, never on a hard surface. Mats should be placed under the equipment and properly secured, at all times. • Have a coach or program director who is qualified and is at every practice. Injuries stemming from

	overuse are common in gymnastics and only put a gymnast at risk for more serious injuries. • Learn how to fall safely. This is one of the first skills a gymnast learns' and it prevents both head and neck injuries. • Some safety tips: Use correct matting ... Never try a new skill without supervision ... Do not run around the gym ... Watch out for other gymnasts ... Listen to the teacher/coach ... Stay off your head ... Stretch before practice, warm-up before stretching ... If something hurts, tell your teacher/coach ... Have fun.
Priorities of water rescue: • Your own personal safety should always be the number 1 priority in any rescue situation. Self-preservation is paramount! • People in difficulty in the water are likely to be in a state of panic, fearing for their lives, and this makes the situation highly dangerous.	
The 4 A's of Rescue; Awareness, Assessment, Action and Aftercare. • Awareness: recognise an emergency and accept responsibility. • Assessment: make an informed judgement. • Action: develop a plan and affect the rescue. • Aftercare: give aid until medical help arrives	

Warm-Up and Cool-Down

Warm-up and cool-down sessions should be part of every class. These exercises prepare muscles properly for physical activity and aid in overall recuperation and ultimately prevent injury.

Every physical education session should be preceded by a period of warm up where the body is prepared gradually for the physical activity to follow. Warm up sessions generally include (a) joint mobility exercises, (b) stretching exercises and (3) preparatory/motivational games or activities. **Warm-up activities should generally last between 5-8 minutes**

Joint mobility			
			
Stretching exercise			
			
Preparatory Games/Activities			
jumping jacks  60sec	butt kicks  60sec	mountain climbers  60sec	high kicks  60sec

PHYSICAL EDUCATION CONTENT CONCEPTS KNOWLEDGE AND SKILLS

The Movement Analysis Framework¹ - The Wheel (see appendix) - is intended to show how the skill themes and movement concepts interact with each other. Skill themes and movement concepts, differentiate the movements (skill themes) from the ideas (movement concepts) used to modify or enrich the range and effectiveness of skill employment.

Space Awareness		Effort		Relationships
(Where the body moves)		(How the body moves)		
Location	Self-space and general space	Time	Fast/Slow	Of body parts: Round (curved), narrow, wide, twisted, symmetrical/ nonsymmetrical.
			Sudden / Sustained	
Directions	Up / Down	Force		With objects and/ or people: Over/ under, on/off, near/far, in front/behind, along/through, meeting/parting, surrounding, around, alongside.
	Forward / Backward		Strong / Light	
	Right / Left			
	Clockwise / counterclockwise	Flow	Bound / Free	
Levels	Low / Middle / High			With people: Leading/following, mirroring/matching, unison/contrast, alone in a mass, solo, partners, groups, between groups.
Pathways	Straight / Curved			
Extensions	Large / Small			
	Far / Near			

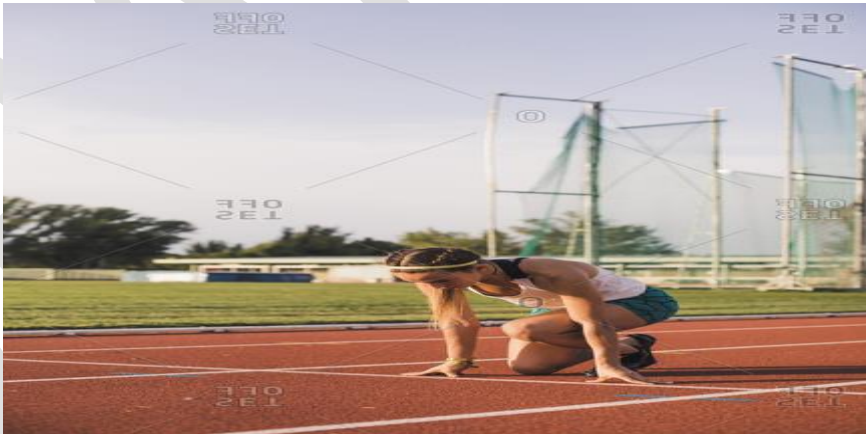

* This table represents many of the movement concepts taught in physical education. It is not meant to be all-inclusive, but to provide examples of movement concepts.

¹ Graham, George, Shirley Ann Holt/Hale, and Melissa Parker. Children Moving: A Reflective Approach to Teaching Physical Education. Mountain View, Calif: Mayfield Pub. Co, 1993.

Year 4

TERM 1

Weeks 1 – 10

TOPIC: FITNESS		WEEK 1-3
SKILL/S	ACTIVITY	
• Athletic crouch start • Overhand pass • Running	INITIAL PHASE: Warm up activity • Joint mobility • Stretching • Preparatory Games/Activities	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills	Year 4: Term 1	
	Crouch start and 100m relay Activity 1 The teacher facilitates the three types of the crouch starts which are: Bunch or bullet start  - The knee of the rear leg is opposite the toe of the leading leg - Hands are placed shoulder-width apart behind the starting line. Medium/Sprint start	

- The knee of the back leg is opposite the arch of the leading foot.
- The feet are closer together than the elongated start but farther apart than the bullet start.
- Hands are placed shoulder-width apart behind the starting line.

Elongated start

- The knee of the back leg is slightly behind the heel of the front foot.
- Your feet are spread out farther than the other two.
- Your back leg is stretched or elongated behind you.
- Hands are placed shoulder-width apart behind the starting line.

Activity 2

100m relay race

In a relay track event; the baton is passed to mark a change in runners.

- The **100m relay** or long relay is an athletics track event, in which teams consist of four runners who each complete 100m.
- Each leg of the 100m relay consists of four equal lengths of 100m—with each athlete running the same distance. ... Following the 1st leg, the remaining 2nd, 3rd, and 4th legs will **exchange** the baton within the designated exchange zone—with the outgoing runner continuing to run their 100m leg.

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: SPORT		WEEK 1-3	
SKILL/S		ACTIVITY	
Sports skills: • Cricket – Batting, bowling; fielding; field placing Catching • Tennis- Forehand and backhand shots: Grip and foot positions • Swimming- Breaststroke, arms and legs action		INITIAL PHASE: Warm up activity • Joint mobility • Stretching • Preparatory Games/Activities	
		Year 4: Term 1	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills Develop learner posture		Activity 1 Cricket: The fielding techniques are very important to catch or stop the ball and limit the number of runs scored. These fielding techniques can be classified into ground fielding and catching. Ground fielding is characterised by your movement to the ball and not wait for it to come to you. The main technique used to stop the ball on the ground is known as 'long barrier' where you place your knee on the ground with the area between your knee and your foot creating the barrier for the ball not to pass.	

Catching a ball is either with the fingers pointing upward or downward depending on the trajectory of the ball in the air.

Fielding positions is a standard place where a fielder stands when a bowler begins his run-up. The cricket field is divided into two parts – Off and On or Leg side

Activity 2

Tennis

The basic tennis strokes are the foundation of the on-court game. A player's **forehand** is usually their strongest shot. This particular stroke involves a player's dominant hand doing most of the work. The forehand (right-handed) swing starts on the right side of your body, continues forward and across your body as you contact the ball (at this point the palm of your hand is turned away from your body), and finishes on the left side of your body.

Activity 3

Swimming

Breaststroke for advanced swimmers and competition swimmers, dip their head underwater during the glide phase, which improves their position in the water and reduces drag.

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: GAMES		WEEK 1-3	
SKILL/S	ACTIVITY		
• (Throwing) Handling of the ball • Footwork • Throwing • Arm movement • Releasing of the ball at the correct moment. • Coordination • Control	INITIAL PHASE: Warm up activity • Joint mobility • Stretching • Preparatory Games/Activities • Be aware of safety at all times		
Year 4: Term 1			
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills	Activity 1 Tennis set Striking the ball across the net. Striking the ball and serving position All it requires is a racket and very little room, just a few feet of space. Here's how to do it. • Use rolled newspapers as rackets. • Hold your racket in your hitting arm. Your arm should be straight out in front of you with your palm facing up. • This is called supination simply turn your hand upside down. • This will cause the racket to flip from right to left for right-handed players. • This is called pronation.		

- Continue alternating between supination and pronation until your forearm tires.
- Start with 10 reps and build up to at least 25 without stopping.
- You can add a racket weight for increased resistance.
- This is a great exercise to do in the morning and evening – or any free time you have.

Activity 2

Athletics games: Discuss

- Work in groups of 5
- To throw the discus do the following:
 - Place your thumb on the plate.
 - The rest of your fingertips should spread equally apart and extend over the rim of the discus.
 - The discus will rest on the joints closest to the fingertips
 - Stand with your left shoulder pointing at the target and your body facing the direction perpendicular to your shoulder (for right-handers).
 - Keep your feet shoulder-width apart.
 - Bend your knees slightly.
 - Hold the discus to your front, with your throwing hand, palm down.
 - Your other hand should support the discus from below to prevent it from falling

- Swing your throwing arm far back, palm still facing down. Throwing arm is pulled back to a comfortable limit, swing the discus to the front.
- Push with right leg, twist hips, and snap left arm across chest to the left.
- Finish up looking at the target, and throwing hand should follow through at an angle where the discus would take off. To eject the discus, squeeze it like a bar of soap, so that the discus spins off the index finger.

Activity 3

Modified cricket: Bowling and Batting

Work in groups

- Participants are split into two teams.
- One **team bats** while the other fields.
- Bat for a set time, or a pre-determined number of 'outs' per team.
- Ball is bowled underarm by the instructor to the batter who hits the ball into the field of play and then runs around one of the markers/stumps adjacent to the batting stumps.

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: FITNESS		WEEK 4-5
SKILL/S	ACTIVITY	
• First aid skills • Functional training	INITIAL PHASE: Warm up activity • Stretching • Marching in place whilst swinging arms • Leg swings (forward and sideways) • Arm circle and shoulder shrugs	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills	Year 4:Term 1	
	Activity 1 First aid theory: (First aid goals, signs and types of sports injuries) and their treatments) The teacher explains that: - First aid skills are kept simple on purpose so that people can remember and use them in an emergency to save lives. The teacher further explains goals of first aid as the “<i>Three P’s</i>”, which: PPP • Preserve life- stop the person from dying. • Prevent further injury- stop the person from being injured more. If possible, an injured person should not be moved.	

- Promote recovery- try to help the person heal his injuries.

First Aid signs

- Can save lives
- Can indicate what procedures to follow in case of an accident or injury

The teacher further explains athletic/sports injuries that may occur and what first aid can be applied?

Injuries	First aid treatment
Cuts, Scrapes and bruises	Stop the bleeding Clean the wound thoroughly Protect the wounds
Bloody nose	Have the athlete sit down and firmly pinch their nostrils shut for several minutes.
Strains and sprains	Limit the swelling with ice, compress and elevate
Knee injuries	RICE therapy (rest, ice, compression, elevation)

Activity 2

10 stations circuit training

- The teacher instructs learners to set up 10 stations for general fitness and rotate. Each activity at a station should be timed at 30 seconds

- There should be intervals of 30 seconds between each station.
- Each learner should complete at least two sets of the circuit
- Complete the session by having learners do shuttle runs at their own pace.

Station 1: star jumps

Station 2: sit ups

Station 3: push ups

Station 4: air (bodyweight) squats

Station 5: burpees

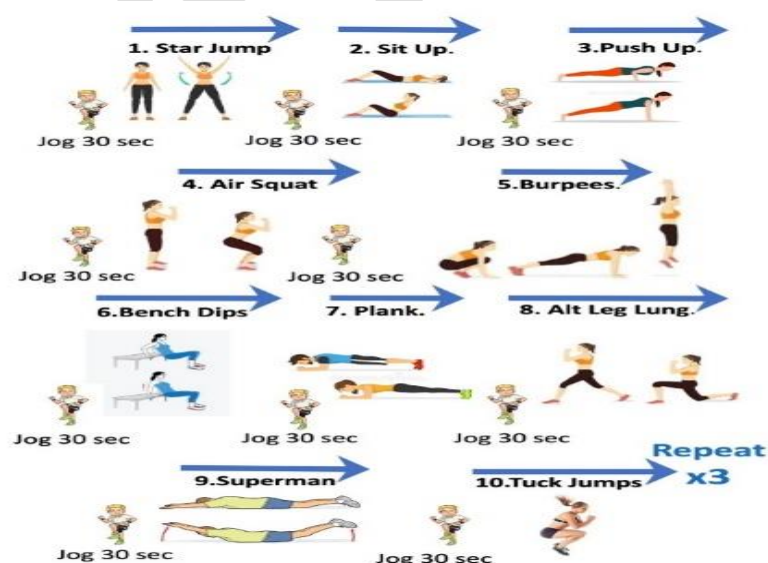

Station 6: bench dips

Station 7: plank

Station 8: alternate leg lunges

Station 9: 'superman'

Station 10: tuck lunges

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: SPORT		WEEK 4-5	
SKILL/S		ACTIVITY	
• Sports skills: Cricket – Batting, bowling; fielding; field placing • Tennis- Forehand and backhand shots: Grip and foot positions • Swimming- Breaststroke, arms and legs action		INITIAL PHASE: Warm up activity ▪ Joint mobility ▪ Stretching ▪ Preparatory Games/Activities	
		Year 4: Term 1	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills Develop learner posture		Activity 1 Cricket Fielding: Wicket-keeping The wicketkeeper is the only fielder permitted to wear gloves and external leg guards. The wicketkeeper shall remain wholly behind the wicket at the striker's end from the moment the ball comes into play until a ball delivered by the bowler touches the bat or person of the striker or passes the wicket at the striker's end or the striker attempts a run. The wicketkeeper stands behind the wicket or stumps and ready to take a catch, stump the batsman out and run out a batsman when occasion arises.	

Activity 2

Tennis

The learner can practice the basic tennis **footwork** patterns in two ways. Open stance: Perform a split step, then just lower and coil.

Closed stance: Perform a split step, pivot on the right foot and step forward into the shot.

Activity 3

Swimming

The **Backstroke**, or back crawl, uses alternating and opposite arm movements. As one arm pulls through the water from an overhead position to the hip, the other arm recovers above the water from the hip to the overhead position and vice versa. The legs perform a flutter kick, similar to the one used in the front crawl. The backstroke is

	swum in a horizontal position on the back. However, the body rolls a little from side to side, following the arm movements.
--	---

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

DRAFT

TOPIC: GAMES		WEEK 4-5
SKILL/S	ACTIVITY	
• Coordination • Jumping • Skipping • Critical • Thinking • Throwing • Aiming • Control	INITIAL PHASE: Warm up activity • Joint mobility • Stretching • Preparatory Games/Activities	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills	Year 4: Term 1	
	1. Traditional Games: Rope-skipping, Diketo, Morabaraba, Kgati, and Dibeke Activity 1.1 Dibeke: • Dibeke is a running ball game played by two teams of 6 boys and 6 girls each. The attacking team tries to kick the ball away from the defenders, while the defenders try to get the ball away from them using their hands. The attackers score when they have moved the ball down the entire length of the field. Activity 2 Morabaraba • Morabaraba is a traditional two player board game that is accessible and easy to learn, and games can be played quickly, but the strategic and tactical aspects of the game run deep. It is simple enough that a board can easily be	

scratched on a stone or into sand, with coins or pebbles (or whatever comes to hand) used as the pieces.

There are three main phases to the game:

1. Placing the cows
2. Moving the cows
3. Flying the cows

Activity 3

Kgati

Kgati is a **rope-skipping game of 3**. 2 people swing the skipping rope and the third jumps in different ways, usually while singing or chanting

Activity 4

Diketo

- Diketo is usually played by **two players** and can be played with pebbles or marbles. The player throws a stone or a gum

into the air and then tries to grab as many stones as possible in the circle before they catch it again with the same hand. If the player does not catch the stone in the air, it is the next player's turn.

Activity 2

Water activities and relay:

For this relay race you will need:

- 2 teams with several people each
- A paper cup for each participant
- 4 small buckets or containers (at least 2 of them should be the same size)
- Before you start poke a hole in the bottom of each cup with a pencil, have each team line up single file at a predetermined starting line and hand each participant a cup.
- Place a bucket full of water at the front of each line.
- Set an empty bucket about 20 litres away from each team.
- The two buckets at the end should be the same size and have a "fill line" marked about halfway up.
- At the count of 3 (or ready set go) have the first person in each line fill their cup and run to the empty bucket to dump the water from their cup. Then they run back and tag the next person in line.
- The first team to fill their bucket to the fill line wins!

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: FITNESS		WEEK 6-8
SKILL/S	ACTIVITY	
• Basic first aid skills • High Jump	INITIAL PHASE: Warm up activity Pulse-raising activities including: • jogging, • jumping rope and • exercising to music	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills	Year 4: Term 1	
	First aid theory practice (Closed and open fracture practical) Activity 1 The teacher reminds learners that: Scenario: - If someone is choking What to do? - Hit the person firmly back up to five times - Check their mouth - If their object does not come out, call the adult. Remember to: - Hit their back The teacher then ask learners what to do if:	

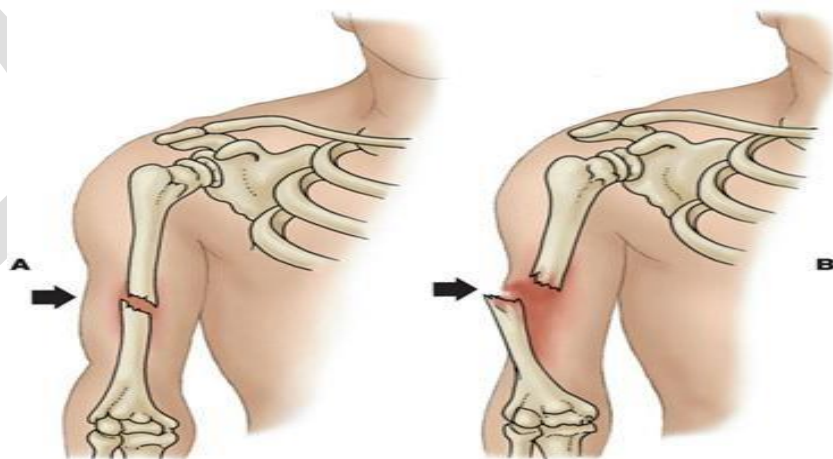

The teacher continues to ask what they should remember.

Demonstration/Practical

Injury: Closed and open fracture

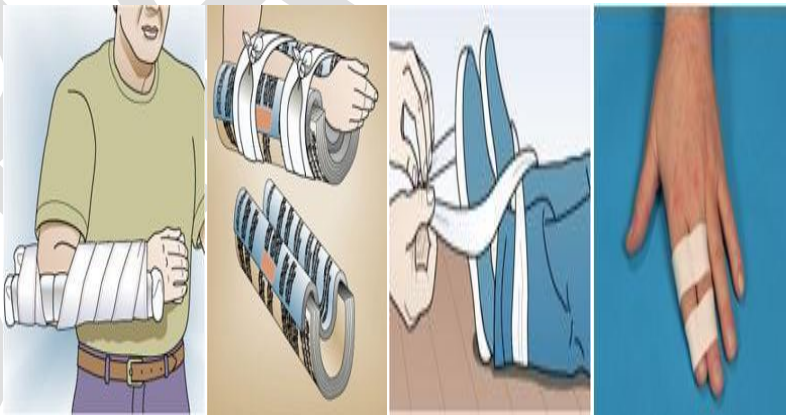

Fractures can be identified by the acronym DOTS: **D** for deformity, **O** for open wounds, **T** for tenderness and **S** for swelling

The aim is to stop possible complications including damage to blood vessels or nerves and infection of the bone or surrounding tissue. How?

The following measures need to be taken in giving first aid to a victim with bone injury:

1. **Don't move the person except if necessary** to avoid further injury.
2. Take these actions immediately while waiting for medical help:
 - **Stop any bleeding:** Apply pressure to the wound with a sterile bandage, a clean cloth or a clean piece of clothing.
 - **Immobilize the injured area:** Don't try to realign the bone or push a bone that's sticking out back in.
 - If you've been trained in how to splint apply a splint to the area above and below the fracture sites because splinting reduces pain, prevents further damage to muscles, nerves and blood vessels, prevents closed fracture from becoming open fracture and reduces bleeding and swelling.

Example:

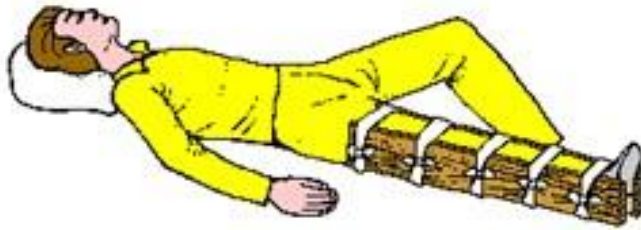

NB: Any firm object or material can serve as a splint such as sticks, boards, or even rolled up newspapers.

Rules to consider when applying splints:

1. The joint above and below the broken bone should be immobilized to protect the fracture site. For example, if the lower leg is broken, the splint should immobilize both the ankle and the knee.

Example:

Lower leg fracture

Upper arm fracture

2. Fasten splints in place with bandages, strips of adhesive tape, clothing, or other suitable materials.
3. Although splints should be applied snugly, they should never be tight enough to interfere with the circulation of the blood.
4. When you are applying splints to an arm or a leg, try to leave the fingers or toes exposed. If the tips of the fingers or toes become blue or cold, you will know that the splints or bandages are too tight.

Example:

Finished wrap

Scissor technique High Jump

Activity 2

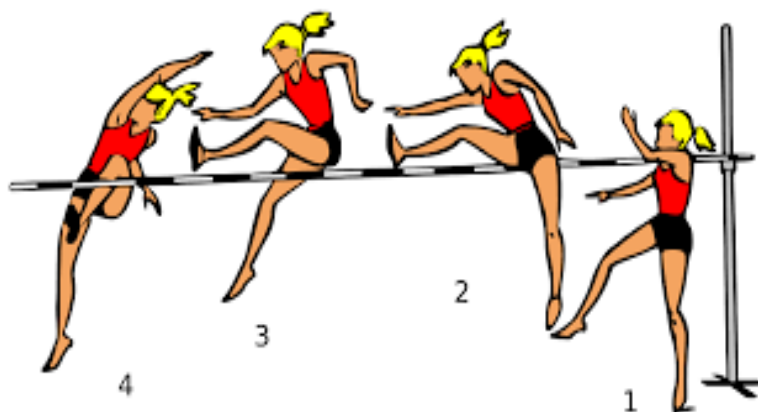

The **high jump** is a track and field event in which learners must jump unaided over a horizontal bar placed at measured heights without dislodging it

Step 2:

Aim:

To introduce the basic scissors high jump action from an angled approach.

Scissor technique is a method of high-jumping in which the jumpers cross the bar in a sitting position by bringing the trailing leg up as the leading leg goes down on the other side of the bar. Allows jumpers to land on their feet.

Set Up:

- Learners should have a run-up of between 7 to 11 steps which should be in a straight line.

	- The line should be around 25-30 degrees when compared with the bar. Activity - Learners should start their run from a consistent starting point. - They should keep their body tall and centre of gravity high off the ground. - As they approach the bar, their legs should be accelerating quicker. - The last two steps should be the quickest. - The aim is to jump as high as possible. - Learners should drive their lead leg up with their knee past the horizontal line of the bar. - Once their lead leg is over, they must kick the other foot over the bar. Lastly, they need to land on their feet to complete the jump.
RECOVERY PHASE: Cool down activity Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.	

TOPIC: SPORT		WEEK 6-8
SKILL/S	ACTIVITY	
• Running • Dancing • Throwing • Hitting • Swimming	INITIAL PHASE: Warm up activity ▪ Joint mobility ▪ Stretching ▪ Preparatory Games/Activities	

• Rhythmic Gymnastics skills	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills Develop learner posture	Year 4: Term 1
	Activity 1 Cricket Catching a high ball A high catch refers to a ball that is coming in from a high position, usually over the fielder's head or towards the fielder's head. Use the orthodox grip if you're on the run to catch a high ball. Position your hands so that the pinkie fingers of both hands are touching, and the palms are facing upwards and outwards. When the ball is close to the hands, the fielder should start bringing his hands nearer to the body, as the ball is usually traveling at high speeds and outstretched arms can cause injuries  Activity 2 Rhythmic gymnastics Rhythmic gymnastics is a sport that combines elements of ballet, gymnastics and dance. There is also an element of Free movement where no apparatus is involved (floor routine).

Activity 3

Tennis (Forehand)

Four steps to a great forehand tennis shot

1. **Preparation:** stand ready and keep moving.
Getting in proper position
2. **Backswing:** Take your racquet back with your elbow close to your body and turn your upper body sideways onto the ball or the net.
3. **Swing in contact:** gripping your racket tightly, keep your eyes on the ball and turn your body towards its direction.

	4. Follow it through: after contact, continue to keep your head down and move your racket in the direction you want your ball to travel towards.
RECOVERY PHASE: Cool down activity Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.	

TOPIC: GAMES		WEEK 6-8
SKILL/S	ACTIVITY	
• Running • Dancing • Throwing • Hitting • Swimming • Rhythmic Gymnastics skills	INITIAL PHASE: Warm up activity ▪ Joint mobility ▪ Stretching ▪ Preparatory Games/Activities	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills Develop learner posture	Year 4: Term 1	
	Modified cricket: Batting  The teacher will instruct learners to work in 4 groups to do batting which involves:	

Standing Sideways: Learners should always stand facing the bowler with their feet shoulder-width apart.

- Learners should bend their body with their hips, keeping their back straight.
- When they have their bat ready, point their non-dominant shoulder towards the bowler and make sure to keep their eyes on the ball.
- If you are right-handed, you stand on the left side of the stump and if you are left-handed, you stand on the right side of the stump.

Holding the bat

Learners need to be taught how to:

- Always hold their bat tight.
- If they are right-handed, their left hand should hold the end of the bat facing the bowler and your right hand should be placed on top of your left hand and hold the bat with 2 fingers and your thumb. Their thumb and forefinger should be in a good position and grip more tightly.
- The opposite is true for left-handed batsmen.
- Draw the line using the end of your bat and make sure that the line is parallel to the middle wicket.
- This line is called the guard line.
- Straighten your bat as much as possible to maintain your body form.
- When lifting your bat, it should point directly into the air and come up to your back shoulder.
- Make sure that when you lift your bat to hit the ball, your forearm should line up with your shoulders.
- Always keep an eye on the ball.
- When the ball has pitched the batsman must decide to move forward to meet the ball or move backward if the ball bounces high.

Activity 1: Batting

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

YEAR 4

TERM 2

Weeks 1 – 10

DRAFT

FITNESS		WEEK 1-3
SKILL/S	ACTIVITY	
• Jogging • Running	INITIAL PHASE: Warm up activity Pulse-raising activities including: - jogging, - jumping rope and - exercising to music	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills	Year 4: Term 2	
	Activity 1: Running (beanbag relay) Running is a popular form of exercise where one foot is always in contact with the ground, the legs are kept mostly straight and the centre of gravity vaults over the stance leg or legs in an inverted pendulum fashion. Importance of running - Help to build strong bones, as it is a weight reduction exercise. - Strengthen muscles. - Improve cardiovascular fitness. - Help maintain a healthy weight. Activity 1. Divide the learners into teams of 6 players each 2. For each team, have a beanbag. 3. Designate a start and finish line. Half of the players from each team stand at the start line and the other half at the finish line. The beanbag is placed at the start. 4. On the teachers command, the first child in each team at the start line will do 5 squat jumps. They will then pick up the beanbag and run to the finish line. 5. When they reach the finish line, their teammate will do 5 squat jumps, pick up the beanbag runs back to the start line.	

	6. This continues until everyone in the team has had a chance to run. 7. The team that finished first is the winner.
RECOVERY PHASE: Cool down activity Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.	

SPORT		WEEK 1-3	
SKILL/S		ACTIVITY	
Sports skills: • Netball - Catching and passing • Hockey - Grip and dribble • Soccer - passing • Basketball - Dribble and dodging • Rugby - Passing • Gymnastics: Floor Sequences		INITIAL PHASE: Warm up activity ▪ Joint mobility ▪ Stretching ▪ Preparatory Games/Activities	
		Year 4: Term 2	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills Develop learner posture		Activity 1 Hockey • Dribble means to control the ball with short strokes of the stick while on the move, alternating the ball from the right side of the body to the left side of the body in order to elude defenders. Good dribbling skills enable a player to keep control of the ball, move past the opposition or to simply move the team forward. There are two main dribble types in hockey; the straight dribble (keeping the ball close to your stick) and the loose dribble (pushing the ball slightly ahead of you).	

Activity 2

Soccer

- **Passing** - A **long pass** is an attacking skill that allows players to switch the direction of the attack very quickly to create space, find a teammate or to catch out the opposition. The long pass is generally more attacking than a short pass. Long passing requires a specific posture i.e. an angled approach is required ...lean back slightly... strike with the laces ... strike bottom half of the ball and a vertical line that bisects it.

Activity 3

Basketball

- **Dodging** involves quick, deceptive changes in direction to evade or outmanoeuvre an opponent. When dodging, knees are bent and the body shifts rapidly in a sideways direction.
- The skill of dodging is evident in moving the shoulders, head, eyes or other body parts to deceive or 'fake' the opposition as a way of: getting free to receive a pass; 'getting around' your opponent; or avoiding being marked by your opponent.

Activity 4

Rugby

Passing

- The **spiral or spin pass** is one of the most frequently used passes in rugby due to its wide range of uses. The ball travels over a longer distance at a faster speed when in a spin pass compared to most other passes. The spin pass is executed by a player holding the rugby ball with only his thumb on the one hand and fingers on the other. Next, the player should draw his arms back away from the direction of the teammate he is aiming the pass at, before throwing his arms across his body in that direction. The player

will let go of the ball by pulling his fingers up in a flicking motion to ensure that the ball spins.

Activity 5

Gymnastics

Floor sequences

- Floor sequences are events in which movements are performed on the floor in an area 12 metres square. This area is covered by some type of cloth or mat with some cushioning. No other apparatus is used.

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: GAMES		WEEK 1-3
SKILL/S	ACTIVITY	
• Coordination • Jumping • Crawling • Catching • Throwing	INITIAL PHASE: Warm up activity • Joint mobility • Stretching • Preparatory Games/Activities	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills	Year 4: Term 2	
	Activity 1 Obstacle course Learners work in groups of four to five Find a good space for the obstacle course. You will need to find a good location to build it in. Look around for the best space available to you for your obstacle course. • Consider how the obstacles will work sequentially. • Make sure obstacles are far enough apart so that they won't interfere with one another • There must be a definite starting and finishing point. • Have 12 stations. • Learners need to be given instructions what to do at each station. Obstacle course (Number the stations with the use of cones and add an instruction card to each station.) Whistle blows and groups starts. While the whistle blows a stopwatch is starting to record the time of each group Station 1	

- Crawl under or over a row of chairs.

Station 2

- Crawl under a string stretched between two chair legs.

Station 3

- Jump into and out of a Hula-Hoop five times.

Station 4

- Walk on a balance board.

Station 5

- Throw a beanbag into a laundry basket.

Station 6

- Run while balancing a beanbag on your head.

Station 7

- Do a ring toss by throwing a ring over a pole

Station 8

- Play one hole of Newspaper Golf.

Station 9

- Jump 10 times with a rope.

Station 10

- Somersault from one point to another

Station 11

- Do a handstand.

Station 12

- Do ten jumping jacks.
- Defined finish line where learners need to stop to be indicated.

Activity 2

Cops and robbers

Equipment needed

- 7-9 hula hoops.
- A whole bunch of bean bags.
- Cones to mark centre safe zone (if playing outside).

Instructions:

- Scatter the hula hoops around the gym/open area.
- Put as many bean bags into each hoop as you can.
- Split the class into 2 even teams, placing one team in the middle of the gym, inside the centre circle (this will be their safe zone).
- Have the other team scatter around the playing area.
- The players in the middle of the gym are the robbers.
- The players outside the safe zone, scattered around the playing area, are the cops.
- The objective of the game is for the robbers to steal as many bean bags as they can and bring them back to their safe zone without being tagged by a cop.
- If a robber can make it to a hula hoop he/she can stand and be safe inside the hula hoop with the bean bags.
- Only one robber can be inside a hula hoop at one time.
- Robbers can only steal one bean bag at a time.
- If a robber makes it back to their safe zone without being tagged by a cop, he/she drops the bean bag in the middle of the safe zone and prepares to head out again.
- If a robber is tagged by a cop, and does not have a bean bag, he or she must sit down wherever he or she was tagged.
- If a robber is tagged while holding a bean bag, he or she must first return the bean bag to the hula hoop, and then go and sit down back in the spot where he or she was tagged.
- When a robber leaves the safe zone, they can either try and steal a bean bag OR save a robber who has been frozen (they cannot do both).
- To save a robber, they must make it to the frozen robber and touch them and then, while still remaining in contact

	with them, walk back to the safe zone together before re-joining the game. • At the end of each round have the cops and robbers switch roles.
RECOVERY PHASE: Cool down activity Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.	

TOPIC: FITNESS		WEEK 4-5
SKILL/S	ACTIVITY	
• Running • Delivering/passing	INITIAL PHASE: Warm up activity Pulse-raising activities including: - jogging, - some practice starts and accelerations	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills	Year 4: Term 2	
	Activity 1 50m sprints - 50 metres is a sprint event in track and field. It is a relatively uncommon non-championship event for indoor track and field - The 50 Meter Dash is a straight race that is 1/8 the length of the track. - 50 m sprint start from a stationary standing position (hands cannot touch the ground), with one foot in front of the other. The front foot must be behind the starting line. - Once the runner is ready and motionless, the starter gives the instructions "set" then "go." Example: 	
	Rules of 50 m sprinting	

	1. Athletes must remain in their lanes throughout the race. 2. Two trials are allowed, and the best time is recorded. The timing starts from the first movement (if using a stopwatch) or when the timing system is triggered, and finishes when the chest crosses the finish line.
RECOVERY PHASE: Cool down activity Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.	

TOPIC: SPORT		WEEK 4 -5
SKILL/S	ACTIVITY	
Sports skills: • Hockey- corners • Soccer- trapping • Basketball: passing • Rugby: scrum and line-out • Volleyball: passing	INITIAL PHASE: Warm up activity ▪ Joint mobility ▪ Stretching ▪ Preparatory Games/Activities	
CORE PHASE: Main activities • Skill development is most important. Adequate time is needed to practice new skills • Develop learner posture	Year 4: Term 2	
	Activity 1 Hockey Corner • A long corner is awarded if a defender accidentally puts the ball over the back line. Long corners are taken approximately 20m back from the goal line and in-line with the point at which the ball crossed the goal line and cannot be hit directly into the circle. Short corners have more chances of being successful as compared to the long corners. 	

Activity 2

Soccer

Trapping

- Step Trap – Simply step on the ball to trap it. Inside Trap – Stop the ball with the side of your foot. Thigh Trap – Use your thigh to trap the ball when the ball is lower than your chest but too high for your foot. Chest Trap – Use your chest to cushion the ball down to your feet.

Activity 3

Basketball

Passing

- Sometimes a direct pass is not as effective as a bounce pass. There are 4 types of passing: Chest pass - starting from the chest, hold the sides of the ball with both hands and keep your elbows tight next to your torso. ... Bounce pass. ... Overhead pass. ... Behind the Back pass

Activity 4

Rugby

Line-out

- The lineout is a means of restarting the game after the ball, or a player carrying the ball, crosses the touchline. The opponents of the team who last held or touched the ball, prior to it going out of play, throw the ball into the lineout. The team throwing in the ball decides the maximum number of players in the line-out

Activity 5

Volleyball

Passing

- Passing is a very important skill in volleyball and involves setting up your offense. You want to have control over your bump or overhead pass and get it

high and close enough to your setter to give your setter an easy chance to set someone for a spike. There are 5 important steps to follow to execute an overhead pass: Positioning ... get under the ball in plenty of time and square your feet and shoulders to your target. ... Footwork. ... lead with one leg ... Hands in line with forehead fingers spread ... Contact with the ball ... Follow-Through (extend the arms).

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: GAMES		WEEK 4-5
SKILL/S	ACTIVITY	
• Jumping • Skipping • Catching • Crawling • Hopping	INITIAL PHASE: Warm up activity • Joint mobility • Stretching • Preparatory Games/Activities	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills	Year 4: Term 2	
	Gymnastics: Agility Agility is the ability to move quickly on your feet and this can help your speed, strengthen your lower body and reduce the risk of injury. <u>Examples:</u> Forward Running, High-Knee Drills. Dot Drills. Jump Box Drills. L Drills. Agility Drill. Shuttle Runs Activity 1 Forward Running, High-Knee Drills • Requiring only a basic speed later and your body, this agility training exercise is designed to improve foot coordination and speed for all field sport athletes. • Simply run with high knees forward through the ladder, landing in every ladder space. Be sure to land on the balls of your feet and drive forward with your arms.	

- You can also incorporate resistance to add to the strength and power

Activity 2

Dot drills

- Agility and explosive speed are achievable when you have the appropriate leg strength, something that is improved with basic dot drills.
- To complete the dot drill successfully, use tape to place a small “X” on the ground in the pattern of a five, as seen on a dice; you may also use a dot drill mat.
- Start your warm-up by jumping from dot to dot with both feet at once. After you feel warmed up (approximately 30 seconds), progress to one foot hopping and then try to follow a specific jumping pattern.

Activity 3

L-Drills

- Set your cones up for the 3 Cone Drill.
- Start at the line in a 3 Point Stance.
- Come out low for about 5 yards, maintaining medium speed control, touching the line at the centre cone.
- Once you touch the line, immediately return to the start cone, and touch the line using the *same hand*.
- Next, turn and sprint back around the centre cone, planting off your inside foot for a hard turn and figure eight around the end cone (again, planting your inside foot).
- Make a sharp cut around the middle cone, turning on your inside foot, and sprint back to the starting cone, to finish the drill.
- Repeat 3 - 5 times

Activity 4

Agility drill

- Set up several small agility hurdles, placing about 2 feet between each hurdle.
- Start with your legs shoulder-width apart. Begin to jump upward and forward, clearing each hurdle. Be sure to land lightly on the balls of your feet.
- Upon landing, immediately jump again, driving forward with your

Activity 5

Shuttle Runs

- The shuttle run is a standard agility training exercise. Shuttle run drills are an easy way to inject some high-intensity training into a basic conditioning program while you build speed, agility, and endurance.
- Set a training area with two markers, such as cones, about 25 yards apart. With explosive speed, sprint from one marker to the other marker and back. Repeat 6 - 8 times.
- Consider switching it up by including forward-touch-return runs, forward-backward runs, and side-to-side runs

Activity 6

Quick feet

- Stand in the first ladder square with feet shoulder-width apart, knees bent, and torso hinging forward. Drive through heels to jump forward two ladder squares.
- Upon landing, immediately jump back one square. Continue moving forward two squares and back one. At the end of the ladder, run backward to the starting point. Repeat.

Activity 7

Squat out hop in

- Stand in the first ladder square with feet shoulder-width apart. Jump forward one square, spreading legs wide to land in a squat with feet on either side of the ladder.
- Quickly jump to the next square, landing with both feet inside the ladder.
- Continue moving forward.
- At the end of the ladder, run backward to the starting point.
- Repeat

Activity 8

Mr Wolf

- Class has one leader who is the Wolf.
- The rest of the learners must ask the Wolf the time and move forward towards the Wolf.
- First person reaching the Wolf will replace the Wolf.
- One learner is chosen to be Mr Wolf, who then stands at one end of the playing area.
- The other players stand in a line at the other end.
- Mr Wolf turns his back to commence play.
- The players call out, "What's the time Mr Wolf?" and Mr Wolf turns and answers with a time (i.e. 3 o'clock).

- | | |
|--|--|
| | <ul style="list-style-type: none"> • He then turns his back again while the children advance again chanting "What's the time Mr Wolf?" To which Mr Wolf will continue to respond until the players come very close. • Once the line of players is close to Mr Wolf, he can respond to the chant with "It's dinner time!" at which point, he will chase the players back to the starting line with the aim to catch one of the them, who will then become Mr Wolf for the next round of the game. |
|--|--|

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: FITNESS		WEEK 6-8
SKILL/S	ACTIVITY	
• Running • Hopping • Skipping • Jumping • Twisting • Reaching • Falling • Stopping • Throwing • Catching • Kicking	INITIAL PHASE: Warm up activity • Joint mobility • Stretching • Preparatory games/ activities	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills	Year 4: Term 2	
	Activity 1 Running on the spot 1. The running on the spot exercise is performed by standing up with the legs hip-width apart and with a slight bend at the knees.  Importance of running on the spot - Running in place elevates your heart rate, - Improves blood sugar levels, and - Burns calories and fat, all of which help with weight loss.	

- boost cardiovascular function,
- enhance lung capacity, and
- Improve circulation.

Risks of running on the spot

- **Increased stress on muscles:** running on the spot can put stress on certain muscles, especially if done for longer durations.
- **Joint pain:** Often when running on the spot is done at home on a stiff surface like marble or granite, there is relatively less generation of ground reaction forces, which are helpful for reinforcing the bones.

Activity

Ask learners to stand in rows of 5.

Raise the left leg and swing the right arm forward slightly.

Then, with a slight bounce in the transition, switch legs so that the right leg is raised and the left arm swung forwards

Teacher introduces variations:

Learners will raise alternative knees to the chest for 60 seconds.

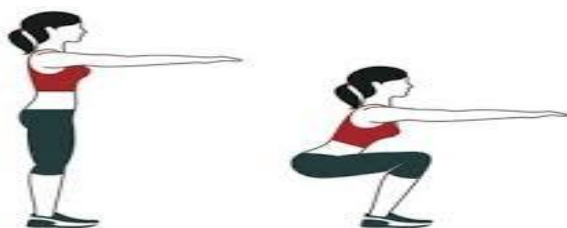

After a 60 second recovery interval, learners will do a standing jump and bring both knees to the chest

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

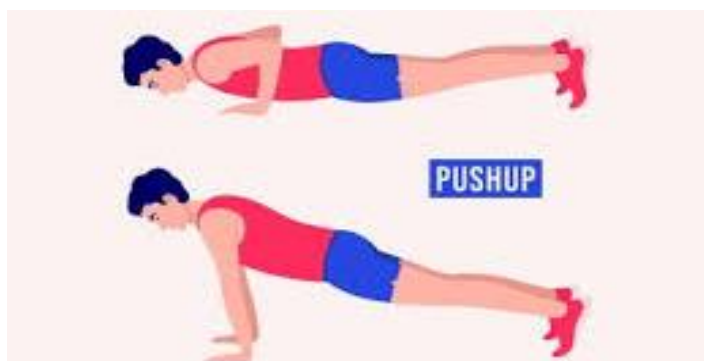

TOPIC: FITNESS		WEEK 6-8
SKILL/S	ACTIVITY	
Functional training	INITIAL PHASE: Warm up activity - Pulse-raising activities include jogging, jumping rope and exercising to music	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills	Year 4: Term 2	
	Activity 1 Circuit training - Circuit training is a style of workout performed with different stations or exercises at a high intensity with little to no rest between each station or exercise - The whole idea of circuit training is to work different muscles all at the same time with a minimum amount of rest Activity Station 1: Sit up (crunch) 1. Lie on the floor facing the ceiling with a slight bend in your knees and arms bent at the elbows and hands lightly touching your head by the ears. 2. Engage your core and lift your upper body so your right elbow touches your left knee. 3. Return to the start position then lift your upper body so your left elbow touches your right knee. 4. Return to the start position.	

Station 2: Squat jumps

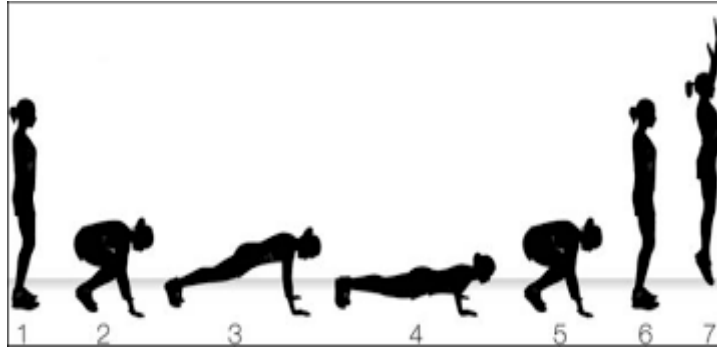

1. **Stand with your feet shoulder-width apart.**
2. Start by doing a regular squat, engage your core, and jump up explosively.
3. When you land, lower your body back into the squat position to complete one rep. Make sure you land with your entire foot on the ground

Station 3: Press ups (push ups)

1. Get down on all fours, placing your hands slightly wider than your shoulders.
2. Straighten your arms and legs.
3. Lower your body until your chest nearly touches the floor.
4. Pause, then push yourself back up.
5. Repeat.

Station 4: burpees

1. Squat down and place both hands on the floor in front of you
2. Jump feet back into plank position
3. Jump feet forward
4. Return to standing

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: SPORT		WEEK 6-8
SKILL/S	ACTIVITY	
Sports skills • Netball- Positions and tactics, catching & passing • Hockey- Striking at goal • Soccer- Goal keeping/ Striking, grip and dribble • Basketball- Shooting, lay-up • Rugby- Punting, passing and kicking • Gymnastics- Forward/backward roll, rhythmic	INITIAL PHASE: Warm up activity ▪ Joint mobility ▪ Stretching ▪ Preparatory Games/Activities	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills Develop learner posture	Year 4:Term 2	
	Activity 1 Hockey Striking at goal When you step with your left foot toward the ball and steady yourself ... at the same time bringing your stick back and your right hand is going to come down to meet with your left foot ... you then strike the ball in the direction of the goal ... follow through with your arms.	

Activity 2

Soccer

Grip and dribble

A successful dribble in soccer is when a player with possession of the ball takes it past an opponent with the intention of then passing it to a teammate or end up scoring a goal. Dribbling requires that your knees should be bent while you pass the ball back and forth between the inner aspects of your feet from one foot to another.

Striking in soccer requires you to start with an aggressive run-up towards the ball. An aggressive run helps channel more power. ...

Plant your supporting foot alongside the ball ...

Lean forward ... Strike the centre of the ball with your laces.

Activity 3

Basketball

Lay-up

A layup is a shot near the basket, usually off the backboard. For a layup, you run towards one side of the basket, jump, and lay the ball off the backboard into the hoop. Practice layups from both sides of the hoop, and with both your right and left hands. It is a shot made from short range by a player on the move toward the basket.

Activity 4

Rugby

Passing and kicking

The rugby ball can be moved up the field by either carrying it or kicking it. However, when passing the ball, it can only be thrown laterally either to the left or the right side of the

ball carrier. There are 3 types of kicking in rugby: the punt; drop kick and place kick.

Activity 5

Gymnastics

Rhythmic gymnastics

Fundamental requirements for rhythmic gymnastics include leaps over the rope and skipping. Other elements include swings, throws, circles, rotations and figures of eight. The rope must be held lightly so that all movements and characteristics of this apparatus may be performed.

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: GAMES		WEEK 6-8
SKILL/S	ACTIVITY	
• Coordination • Catching • Throwing • Invasion • Defending • Jumping • Sprinting • Crawl	INITIAL PHASE: Warm up activity • Joint mobility • Stretching • Preparatory Games/Activities	
CORE PHASE: Main activities • Skill development is most important. Adequate time is needed to practice new skills	Year 4 Term 2	
	Activity 1 Obstacle course Learners are divided into 2 groups. Pack obstacle courses that are the same for each group. There must be defined starting point and a finish line. Learners are instructed on what to do at each station. Each team is being led by a team-leader. At the blow of the whistle the teams start. Station 1 Climb over the chair to the next station. Station 2 Walk with a beanbag on your head on the balance board to the other side of the station. Station 3 Use the bat to hit the ball that is being thrown by another member in the designated area.	

Station 4

Kick the ball through the goalpost

Station 5

Run through the stationed cones with your knees up high.

Station 6

Do 10 sit-ups and 1 cartwheel

Station 7

Jump with both feet at the same time through the ladder.

Station 8

Sprint to the next station with short, close steps.

Station 10

Crawl through the legs of the chair underneath to the other side.

Station 11

Sprint to the finish line.

Activity 2**Mini Soccer**

Playing soccer involves several basic skills: **passing/shooting**, dribbling and controlling or trapping the ball.

**One touch shooting**

One-touch shooting game can improve the players attacking as well as rehearsing quick and direct shooting ability.

For younger players, the pitch size should be 30×20m area

- Play 4v4.
- There is a goal at each end but no keepers.

Getting started:

- You serve a pass to either team.
- Players combine as they would do in a normal game, but any effort on goal must be one touch (i.e. a first-time shot).
- If the ball leaves play, you have a few restart options: You pass a new ball to the pitch, players either use a roll-in, throw-in, pass-in or dribble-in.
- The game is played for a set time period of 10 minutes and there are no off sides.
- Teams can score a bonus point if the goal comes as a result of two consecutive one-touch passes from two different players.

[Link for mini soccer rules](https://bit.ly/3viYNKi)

<https://bit.ly/3viYNKi>

Activity 3

Mini basketball

Mini basketball cultivates and develops loco-motor skills and object control skill, running (forward and backward) hopping, jumping for height, dodging, side stepping, landing, balancing, catching, throwing/passing, bouncing, striking with the hand and shooting

Shooting Below are some of the activities that can be applied for learners to refine their shooting skills.

Getting started

- Throw ball of different weights and sizes into containers, circles, baskets at different heights and from different distances.
- Shooting free at the basket
- Throwing the ball at spots on the wall, numbers drawn on the wall, in circles placed on the floor or held by another player.
- Shoot balls trying to knock down pins, hit other ball, different objects (in place or moving)

[Link for mini basketball rules](https://bit.ly/3BS6VCN)

<https://bit.ly/3BS6VCN>

Activity 4

Mini hockey

Defending and channelling skills:

Getting started:

- The goalkeeper passes the ball to player 2, who on receiving the ball has to try and score a goal. As soon as they receive the ball the defender is allowed to come in and win the ball. If the defender makes a tackle they have to run with the ball over the end line.
- Split your group into two teams/ defenders and attackers.
- Players with a ball have to run around the cone and try and score. Players without the ball will also have to run around the cone, and the try and stop the other players from scoring

Activity 5 Touch rugby

Passing drill: clapping game

Getting started:

- Get the ball moving in a clockwise circle
- Switch the direction after a couple of minutes of movement.
- Tell the players that they must keep passing the ball around but the receiver needs to clap once before they catch a ball. The ball must be passed over within 5 seconds
- If the receiver forgets to clap and takes the ball, they need to do a short fitness challenge like push-ups or a sprint around a circle.

[Link for touch rugby rules](https://bit.ly/357LMsp)

<https://bit.ly/357LMsp>

Activity 6

Mini Netball

Defending skills

Getting started

- Defender must jump back from attacker with a ball.
- The defender must use arms for power, the head must be up and the eyes must be on the ball. There should be balance over two feet. There should be a bend at hips, knees ankles and the back straight and upright and arms up

Activity 7 Cops and robbers

Getting started:

- | | |
|--|---|
| | <ul style="list-style-type: none">• Divide the class into two groups, cops and robbers• Choose an object for the robbers to try and steal.• To win the game, the robbers must complete their goal of stealing and touching the object and escaping from the cops.• The cops can tack the robbers to remove from the game or send then to jail. |
|--|---|

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

Year 4

TERM 3

Weeks 1 – 10

TOPIC: FITNESS		WEEK 1-3
SKILL/S	ACTIVITY	
• Running • Tagging • Dodging	INITIAL PHASE: Warm up activity ▪ Warm-up by running four laps (1 mile) around the track at an easy effort, followed by dynamic stretches.	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills	Year 4: Term 3	
	Activity 1: Blob tag Cardiovascular lap running A lap is one full circuit in a race , or one run around a track. One lap around the track is 400 meters. Activity 1. One player starts as “it” and runs around trying to tag the other players. 2. If a player gets tagged, they must join hands with the person who tagged them - they have now started to form the Blob, and they are both “it.” 3. The Blob must stay connected and keep trying to tag other players, who then also become part of the Blob. 4. The Blob will keep growing and working together until all of the players have been tagged. 5. The last player to be tagged wins.	

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: SPORT		WEEK 1-3
SKILL/S	ACTIVITY	
Sports skills: • Hockey-Goalkeeping • Soccer-Heading/trapping • Basketball-Passing • Rugby-Scrumming/line-out • Gymnastics-Rhythmic	INITIAL PHASE: Warm up activity ▪ Joint mobility ▪ Stretching ▪ Preparatory Games/Activities	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills Develop learner posture	Year 4: Term 3	
	Activity 1 Hockey Goalkeeping • The goalkeeper is probably the single most important player on the field and should be trained as such. • The training of goalkeepers on a team requires special attention and training because it is a specialized position.	

- Ensure that the player has the right equipment and the equipment fits.
- Teach the goalkeeper to use small steps to allow too quick change in direction.
- Remain balanced when moving.
- Always face the ball even after recovery from a diving save.

Activity 2

Soccer

Trapping

- Trapping (body trapping) refers to the process of stopping or slowing a ball that has been passed from one player to another ...
- Lean backward from the waist as you collect the ball against your chest.
- Extend your arms for balance and remain on the balls of your feet as the ball travels down your body to the ground at your feet.
- The idea with trapping is that you cushion the ball and bring it under control before playing it on to a teammate or taking a shot.
- Key to trapping the ball is your timing, touch, and technique

Activity 3

Basketball

Passing

Overhead pass –

- This is executed when a player throws the ball with both hands starting from behind the head and releasing the ball out front.
- An overhead pass requires a wind-up because the ball comes from behind the head and therefore has much more power than a regular pass.

Activity 4

Rugby

Line-out

- Forwards from the two teams form two close parallel

lines (1 metre apart) and a player throws in the ball from outside the field of play. It travels above the gap between the two lines of players. The throwing team has an advantage because they know how high it's going and where it's going to land. The hooker usually throws in the ball. The front of the lineout is positioned on the 5 metre in from touch line and the ball must go at least 5 metres. There is another line 15 metres in from touch which shows the farthest distance from the touch line that any member of the lineout may stand.

- Players jump and/or are lifted to catch or deflect the ball. Even if your team isn't throwing you're in with a chance - have a go. After the jump in the lineout your team gets possession, and you determine what happens next.

Activity 5

Gymnastics

Rhythmic

- **Rope** (rhythmic gymnastics) may be made of hemp or a synthetic material which retains the qualities of lightness and suppleness. Its length is in proportion to the size of the gymnast.
- The rope should, when held down by the feet, reach both

of the gymnast's armpits.

- The rope must be coloured, either all or partially. It may be either of a uniform diameter or be progressively thicker in the centre provided that this thickening is of the same material as the rope. The fundamental requirements of a rope routine include leaps and skipping. Other elements include swings, throws, circles, rotations and figures of eight.

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: GAMES		WEEK 1-3
SKILL/S	ACTIVITY	
• Catching • Jumping • Running • Kicking • Hitting • Batting • Dribbling • Throwing	INITIAL PHASE: Warm up activity • Joint mobility • Stretching • Preparatory Games/Activities	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills	Year 4: Term 3	
	Activity 1 Shuttle relay  • A shuttle relay is a relay race which is run back and forth over a straight course. • Each participating team is divided in half, with team members positioned at each end of the course or “track”. When used in an track & field setting, the runners will usually carry a relay baton • Shuttle relays can be run over any distance. They are most commonly run over short distances of 10-50 metres when involving young athletes, depending on the age of those involved.	

Step 1

- Divide the class into groups of 4.
- Let them Jog to the next person in line to hand them the baton.

Step 2:

- Let them run fast to the next person in line to hand them the baton.

Activity:

- The 100m shuttle relay will consist of 4 boys and 4 girls from each team. The 4 girls will begin at the starting end and 4 boys to face them.
- The team will run up and down the 100m straight in a shuttle style. The baton will be handed over to the next person round an upright pole.

Activity 2

Mini Netball

- The teacher will remind learners of the modified rules for mini netball

Activity:

For progression, learners will practice the following the shooting, catching and passing drills:

Shooting:

The teacher should use the popular acronym B.E.E.F :

- Let the learners get familiar with the actions first without the ball and then when they feel comfortable with the technique add the ball.
- **B is for Balance:** Ensure your legs are steady by standing with your feet shoulder width apart. Your feet should be pointing towards the goal.
- **E is for Eyes:** Imagine that something is floating just about the ring and aim for that as you shoot.
- **E is for Elbow:** Extend your arms close to your ear with your elbows facing the ring. As you bend your arms backwards, ensure that your elbows maintain the same position before releasing the ball.
- **F is for Follow Through:** Follow through by extending your elbow and flicking your wrist as you release the ball and shoot for the net.

Catching and passing

- First teach the player how to catch and pass the ball properly.
- To make it easier, learners will start with small bean bags instead of balls.

- The teacher will get the learners to stand in a circle and pass the bean bags as if they were balls to their left and then to their right aiming for chest height.
- The teacher should go around the circle a few times before a ball is introduced.
- The teacher should also focus on the accuracy of passing first by keeping only a small distance between the players and allowing them to develop the strength of their passes over time.

Activity 3

Mini hockey

- The teacher will remind learners of the rules for mini hockey.

Activity :

For progression, learners will practice the hockey scoring drills:

Description of the activity:

- First, the teacher will set out some 2 vs 2 pitches consisting of 2 goals, 15 to 20m apart with each goal being 1 stick length wide.
- Once the pitches are laid out, the pitches should be numbered 1,2,3,4, etc. with 4 players and one ball per pitch.
- The length of the game is approximately 2-3 minutes long and starts on the first whistle and stopped by the second whistle.

Coaching points to the activity

- When the game is stopped it is important that there is a winner on each pitch. In the case of a draw the winners is decided on the throw of a stick (flat or round).
- Once every pitch has a winner all the winners move up one pitch, (so if the players are on pitch 3 they move to pitch 4). The losers do the opposite, and move down one pitch.
- The winners on pitch 1 and the loser on the lowest pitch have nowhere to move so they stay on their pitches.

Hockey game priorities:

Priority 1: is to create goal scoring opportunities.

Priority 2 is to retain possession. Aim to pass forward.

Priority 3 (if you cannot retain possession) is to hit the ball off the other end & defend in the opposing half.

Activity 4

Mini Soccer

Activity :

For progression, learners will practice the soccer scoring drills which they will incorporate when they play mini soccer using the basic rules learnt in year 3.

Set Up of the activity:

- The teacher will create a 10X10 grid just beyond on the edge of the 18 yard box.
- Divide the team into 2 lines on the far cones facing the goal.
- One player from each line steps to the cone near the 20m (this player becomes the player that lays the ball off to the player on the cone farthest from the 20m).

Instructions of the activity:

- Player 1 passes a diagonal ball to player 4.
- Player 4 has a touch and lays the ball off into space for player 1 to run onto the ball and hit a first time strike on goal.
- The shooting player (player 1) takes the place of the player that set up his shot (player 4), and player 4 shags the shot and switches lines.
- Next, Player 2 passes a diagonal ball to player 3.
- Player 3 lays the ball off to player 2 who shoots first time on goal.

- Player 2 becomes the target player;
- The target player (player 3) shags the shot. The teacher must make sure the players switch lines so they shoot with both feet.

Coaching Points on the activity

- Good controlled approach on the ball
- Plant foot in good spot next to the ball
- Shoot with the appropriate foot
- Hit the ball on target

[Link for mini soccer rules](#)

<https://bit.ly/3viYNKi>

Activity 5

Touch rugby

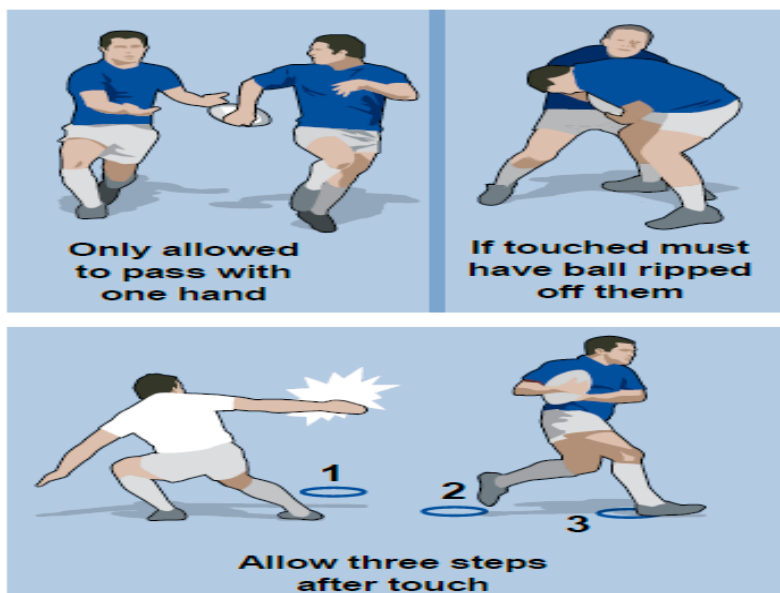

- The teacher will remind learners of the rules for touch rugby

Activity:

For progression the learners will practice three rugby drills for better handling. This will be achieved through:

1. Three-second touch

The ball carrier has three seconds to release the ball after he has been touched but can keep running.

2. No-miss pass touch

- The ball carrier cannot use a long pass to miss out players. This promotes quicker hands to move the ball and improved depth.
- No-miss pass touch works well if you can overload the attack.
- Give each player a number.
- After every minute, the defending team drops one player out in rotation. This means that when in attack, that player plays on but in defence he has to run to the back of the playing area.

3. Lumpy touch

- Two or three players per team are “lumpies” and can only offload the ball with one hand. If they are touched, a team mate has to rip the ball off them (see the pictures on the right). They can take three steps forward once touched but one lumpy cannot rip the ball from another.

[link for touch rugby rules](https://bit.ly/357LMsp)
<https://bit.ly/357LMsp>

Activity 6

Mini basketball

For progression, learners will practice mini basketball using the basic rules learnt in year 3.

Activity: Mini basketball relay

Game description:

- A simple relay idea to practice basketball skills: dribbling, shooting, re-bounding.
- Players are sure to have a fun time playing off against each other to try to be the first team to score 10 baskets (or most baskets made in a certain time)!
- Best to use small groups/teams of 2-3 players per team on half courts, but could also be done on full court.
- Each player has their own ball. Each team faces their own hoop.
- On the go signal, the first player from each line dribbles the ball towards their hoop and takes a shot where they feel comfortable.
- Players continue to shoot until one of them scores a basket. At that time, the team who scored must yell out their score (for example, “THREE”!) and then the players must retrieve their ball and return to their teams’ line.

- As soon as they return, the next player in line can go. Others waiting in line can practice their dribbling skills and must not wait for too long.

[link for mini basketball rules](#)

<https://bit.ly/3BS6VCN>

Activity 7

Volleyball

Activity:

For progression, learners will practice volleyball using the basic rules learnt in year 3.

The focus will be the on the following two skills:

1. Over The Net Drill

- The teacher will need 3 players and volleyball court with a net.
- 1 player will stand at the attack line on one side.
- The other 2 players will stand on the other side. One will stand near the net with other directly behind
- The single player will first toss the ball to the other side towards the player off the net
- The player off the net will then pass to their teammate on the net
- That player will then set the ball and then move off the net where their teammate was. Ultimately they swap positions.
- That player will then hit a shot to the other side with the single player and the then step under the net to become their setter.

2. The Blocking Form Drill

- The teacher need 4-5 players and a volleyball court with a net
- Have the players line up on the net
- The teacher will instruct the players to perform blocking drills by jumping with arms up

Activity 8 Softball

For progression, learners are instructed to simulate the 9 positions of softball.

Skills needed for hitting in softball

Grip

- When gripping the bat, the hitter applies pressure with the fingers, not the palms.
- She grips the bat where the calluses are. The bottom hand (left hand for a right handed batter) controls the bat, and the top hand supports the bat loosely. The bottom hand grips the bat as a person would grip a hammer or a golf club. The top hand is placed against the bottom hand with a straight line.
- The arms are not crossed. The bat is gripped loosely - no 'white knuckles' here - and the wrists have flexibility. For better bat control the player may choke up on the bat by moving both hands several centimetres up from the knob.

Hand Position

- The hands start close to the body about 5cm in front of the chest and between the shoulders. Both elbows are down, and the shoulders are tension free. We call this position the **power position**, or **power alley**.

Swing

- The swing begins with the legs and hips (the hands and shoulders stay back.)

- The hitter pushes off the ball of the back foot as the softball approaches the plate. The back knee will begin to move in and the hips begin to rotate.
- As the hands begin to move the knob of the bat toward the ball, the hitter does not allow the bat head to fall below the hands. The lead arm maintains a 90° angle.
- The batter should allow the front shoulder to track the ball from the pitcher's hand to the contact zone.
- As the bat is approaching the ball, the arms remain bent.
- The hips continue to rotate as the hitter approaches the contact point.
- The back leg continues to drive into a now firm front leg, and the back toe begins to turn toward the pitcher.

Contact

- The contact spot for a pitch down the middle is directly opposite the front hip.
- The batter must be patient and wait for the ball to come to her.
- By using good rotation of the hips, the hitter can hit just as hard to the opposite field as she does when pulling a pitch.
- The player must understand where to make contact with different pitches so that she can hit the ball hard at each location.

	Follow - Through • The swing does not end when the bat contacts the ball - it is important to make sure your players swing all the way through. link for softball rules https://bit.ly/35aVXfP Activity : Learners need to play a soft game focusing on the hitting skills in softball
RECOVERY PHASE: Cool down activity Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.	

TOPIC: FITNESS		WEEK 4-5	
SKILLS		ACTIVITY	
• Running • Passing		INITIAL PHASE: Warm up activity • Joint Mobility • Stretching • Preparatory games/ activities	
		Year 4: Term 3	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills		Activity 1: Paarlauf relay Paarlauf means “pair running” and is a classic athletics session. This is a fun session in which everyone takes a turn to run as fast as they can while the other person jogs or walks back to the start for their recovery. Paarlauf relay is a relay run in a circle formation, which involves teams of six to eight children spread around the perimeter of a track or pitch. Each team runs concurrently in in relay formation for a given time and record how many laps they complete.	

Activity

The teacher needs to ensure that:

Start on opposite sides of the pitch.

1. The runners start opposite each other across the pitch. They choose one runner to go first.

The first runner runs as fast as they can around the pitch

2. The second runner waits on the other side of the pitch while the first runner runs around the pitch as fast as they can until they meet their partner on the other side. (Note take care not to run into each other and cause injury from the collision).

The second runner takes their turn to run as fast as they can.

3. As soon as the first runner reaches them the second runners sets off to run as fast as they can around the pitch.

Jog/walk recovery

4. While each runner is running fast around the pitch the other runner jogs or walks across the pitch back to the start. They must be back at the start before the other runner reaches them.

	Repeat. 5. The runners take turns until they have completed the agreed number of laps. Rest for two minutes then repeat again.
RECOVERY PHASE: Cool down activity Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.	

TOPIC: SPORT		WEEK 4-5
SKILL/S	ACTIVITY	
Sports skills: • Cricket- Fielding- defensive and attacking • Tennis- Foot positions for forehand and backhand respectively • Swimming- Strokes- arm and leg actions	INITIAL PHASE: Warm up activity ▪ Joint mobility ▪ Stretching ▪ Preparatory Games/Activities	
	Year 4: Term 3	
	Activity 1	

CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills Develop learner posture	Cricket Fielding- attacking • Attacking fielding supports an attacking field where fielders are positioned in such a way that they are likely to take catches, and thus likely to get the batsman out. • Such a field generally involves having many fielders close to the batsman. • An attacking fielding technique in cricket is characterised by movements where you go to the ball and do not wait for it to come to you. • This is also referred as attacking the ball. By “attacking” the ball you come towards the ball if it is hit to you, rather than standing still and waiting for it. • If you can do this, it puts more doubt in the batsmen’s mind. As the bowler is running in about to bowl, you as the fielder should start walking in from a few steps behind your original fielding position. When the bowler releases the ball, a good idea is to stop and “spring” with your knees. • This allows you to transfer your weight of either foot, enabling you to react to the left or the right.  Activity 2 Tennis Foot positions for backhand
---	--

- The closed stance is the most common stance used for backhand, especially when the ball goes a little wider and we want to transfer bodyweight towards it ... load on your dominant leg (right for right-handed players) ... step out to the side with your back leg after the stroke. The first tip is to have a powerful crossover step. From your ready position you want to take a crossover step to the ball. If you are a righty, this will mean that you step across with your right leg to your backhand side. This step will allow you to cover more ground than a conventional shuffle.

Activity 3

Swimming

Strokes- leg actions

- Swimming requires your arms and **legs** to remain in motion in order to stay afloat and propel yourself backward or forward. Regardless of the type of stroke you're swimming, the key is to make fluid and elongated strokes, which optimizes your manoeuvres through the water. The leg movement with the freestyle stroke is called the flutter kick. The legs move alternately, with one leg kicking downward while the other leg moves upward. While the legs provide only a small part of the overall speed, they are important to stabilize the body position. Keep your legs horizontal close

to the surface. But not completely out of the water the efficiency of the kick comes from the flexibility of your ankle.

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: GAMES		WEEK 4-5	
SKILL/S	ACTIVITY		
• Catching • Swimming • Diving • Kicking • Hitting • Batting • Hopping • Running • Pushing	INITIAL PHASE: Warm up activity • Joint mobility • Stretching • Preparatory Games/Activities		

Activity 1

Athletics:

Athletics is an exclusive collection of sporting events that involve competitive running, jumping, throwing, and walking.

Track: Sprinting

- Stand opposite your child and explain that you will run together to practice fast running.
- Begin by jogging slowly with them and make sure they are facing you.
- Point out that your elbows are bent at 90 degrees. Make sure their elbows are also bent at 90 degrees.
- Talk to them about lightly gripping a small bird in each hand. Their hands should be more or less closed but not tight.
- Tell them to pump their hands from hip to lip Demonstrate the movement and make sure they do the same.
- Start to speed up your movements slightly and bring your knees up high.
- Finally, ask them to run fast for five seconds (as if they are running a race)

Activity 2: Field: Discus

CORE PHASE:

Main activities

Skill

development is most important. Adequate time is needed to practice new skills

	Activity • Begin by asking the athletes to assume a ready stance, standing “like a scarecrow. • The non-throwing arm is extended towards the throwing direction and the throwing arm is extended back. Leaving their non-throwing arm extended to the front, the athletes swing their throwing arm forward to bring their hands together in a wide, straight-arm clapping action. This mimics the basic discus slinging action • Ensure that the non-throwing arm doesn’t move and stays extended. • The athletes should watch their hands come together as they clap. Activity 3: Elevation, rotation, balance with a partner Work with a partner and do the activities together. Elevation: Elevation is the upward movement of structures of the body. For example, elevation of a shoulder joint raises the corresponding arm vertically upwards, rather than outwards, to the side or in any other direction Activity: • Do 10 High jump movements with both feet in the air and arms stretched. • Leap like a ballerina to the other cone. • Jump with a rope. • Run sideways to the other cone. • Do push-ups/sit-ups/chin-ups/squats, lunges
--	---

Balance:

Activity

- Standing with your weight on one leg and raising the other leg to the side or behind you.
- Putting your heel right in front of your toe, like walking a tightrope.
- Standing up and sitting down from a chair without using your hands.
- Walking while alternating knee lifts with each step
- Walk backwards on the balance board.
- Walk with your arms straight and a bean bag in each hand across the balance board.

Activity 4

Water activities to promote confidence:

Being water confident means: **You 'feel' comfortable in and around water. You can put your face in the water**, both with your feet on the ground, and suspended in the water. You float, comfortably on your back and front. You can exhale air slowly and with control when your face is in the water.

Activity 4.1

Treasure Diving. Scatter diving rings or pool toys in the shallow end of the pool, where it's just deep enough so that your child will have to briefly submerge to reach objects on the pool floor.

Activity 4.2

Red Light, Green Light. Also a playground favourite, call out "green light!" To allow your child to move toward you through the water, "red light!" to stop. Play in the shallow end, or use a swim noodle or kickboard. This is another one that teaches comfort in the water.

Teaching confidence in the water is a great way to prepare for swimming school or private swim lessons for kids. The most important thing to remember is let your child get comfortable in the water at their own pace, do not try to force the issue. Sooner or later, they will take to the water eagerly and confidently and their fear of water will fade away.

Activity 5: Mini Cricket:

Catching:

Keep your starting position low and balanced. Stand with your feet just wider than shoulder-distance apart and your knees bent. Keep your weight on the balls of your feet, and distribute your weight evenly on each foot. Be prepared to move in any direction to reach a batted ball.

- Remember to keep your eyes on the ball at all times
- **Hold your hands so your palms face up and your pinkies touch.**
- The orthodox cup is the basic catching hand position used to catch balls at or below chest height.
- Your palms should face up and out, and your fingers and thumbs should be extended.
- Try to keep your hands relatively close to your body as you catch the ball.
- As the ball makes contact with your hands, draw your hands toward your torso to absorb the impact and control the ball.

Bring your hands toward your body as you catch the ball.

- Cup your hands as the ball approaches and hold them out to meet the ball.
- Try to keep your hands relatively close to your body as you catch the ball instead of fully extending your arms.
- As the ball makes contact with your hands, draw your hands toward your torso to absorb the impact and control the ball.

- Keeping your hands relatively close to your body will help you avoid dropping the ball. Additionally, you're more likely to suffer an injury if you try to catch a high-speed ball with outstretched arms

Modify your grip for high catches.

- To catch a ball above shoulder height, hold your hands with the fingers pointing upward and the thumbs touching.
- As the ball approaches, cup the hands with the fingers spread and allow the ball to enter the “cup”. Take the ball to the side of the face as it enters the cup to absorb the impact and maintain control.
- Align yourself with the approaching ball and stand with your knees bent.
- Use the orthodox grip if you're on the run to catch a high ball.
- Deliver an overarm throw after catching the ball.

Activity 6: Tennis set:

- Mini Tennis
- Mini tennis provides learners with the perfect opportunity to learn the fundamentals of tennis at an early age. It is designed for this purpose: smaller courts, nets and rackets or wooden/plastic bats as well as lower-bouncing tennis balls to develop vital tennis skills and techniques.

Activity

- Learners work in pairs. They play crosscourt and can use only forehand.
- Learners are not allowed to come to the net, the ball must bounce once and then the learner must stroke (hit the ball) it across the net.
- Learner 1 throws the ball across the net and after the ball has bounced learner 2 must hit the ball back to learner 1.
- Learner one catches the ball and starts the activity again. After 10 hits the learners change so that learner 2 hits balls.
- To strengthen learners' anticipation and reaction the learners are requested to line up behind a cone on one side of the net. The teacher throws the ball across the net and each learner must catch the ball on the bounce.
- After completion of catch and throw back, learners move to a cone placed on the other of their court while other learners complete the drill.
- Teacher starts the drill again from where learners are placed at cone 2.
- Teacher can introduce variations to this activity.

Activity 7: Traditional Games:

7.1 Hop-Scotch

The first player tosses a marker, also called a "lucky bean", onto the court. The marker (typically a small stone, coin, bean bag, or small chain with a charm) should land in the square without bouncing, sliding, or rolling out. The marker must be thrown in

	sequential numerical order completely within the square without touching the line. The player then hops through the course, skipping the marker's square. Single squares must be hopped on one foot, except for the first single square, where either foot may be used. Side-by-side squares are straddled, with the left foot landing in the left square, and the right foot landing in the right square. Optional squares marked "Safe", "Home", or "Rest" are neutral squares, and may be hopped through in any manner without penalty. After hopping into "Safe", "Home", or "Rest", the player must then turn around and retrace their steps through the course on one or two legs, depending on the square, until reaching the marker's square. The player stops in the square before the marker and reaches down to retrieve the marker and continue the course as stated, without touching a line or stepping into a square with another player's marker. Upon successfully completing the sequence, the player continues the turn by tossing the marker into square number two, and repeating the pattern. If, while hopping through the court in either direction, the player steps on a line, misses a square, or loses balance, the turn ends. Players begin their turns where they last left off. The first player to complete one course for every numbered square on the court wins the game.
	RECOVERY PHASE: Cool down activity Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: FITNESS		WEEK 6-8
SKILL/S	ACTIVITY	
Speed, skill and endurance	INITIAL PHASE: Warm up activity • Joint Mobility • Stretching • Preparatory games / activities	
	Year 4: Term 3	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills	Activity 1: Cardio exercise work-out circuit station The teacher needs to ensure that there is a one-minute rest in between each station. Station 1: Jump squats - Stand with your feet shoulder-width apart. - Start by doing a regular squat, engage your core, and jump up explosively. - When you land, lower your body back into the squat position to complete one rep. - - - Make sure you land with your entire foot on the ground. ... - Do two to three sets of 5 reps.	
		

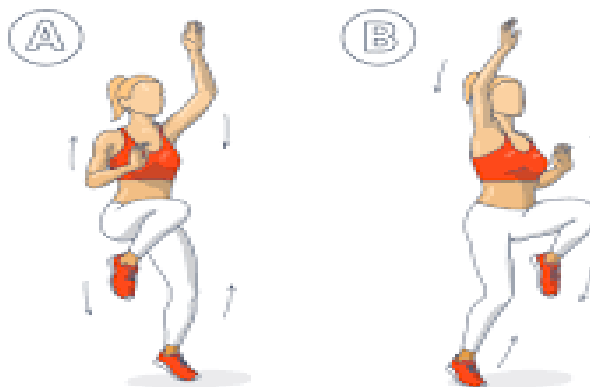

Station 2: Mountain climber

- Put both hands and knees on the floor.
- Place your right foot near your right hand and extend your left leg behind you.
- In one smooth motion, switch your legs, keeping your arms in the same position.
- Switch your legs back and forth twice, such that your right leg is again close to your right hand.

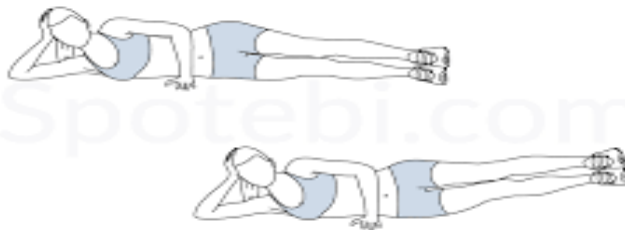

Station 3: Standing mountain climber

- Start with your feet shoulder width apart and your arms by your side
- Bring you right knee up and your left arm up and over your head
- Bring both your knee and arm down and at the same time bring your left knee up and you right arm up over your head.
- Continue to alternate each side

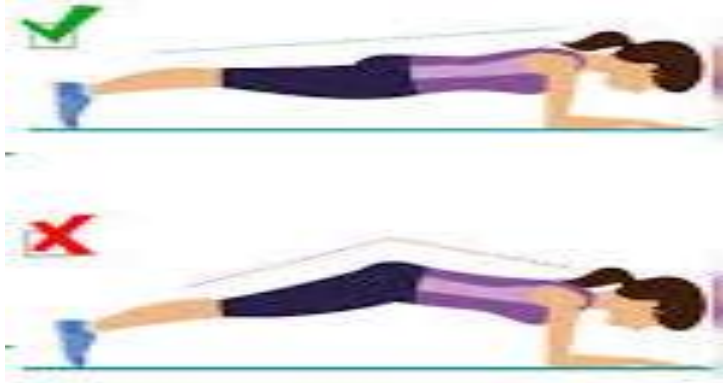

Station 4: Side lifts

- Lie down on your right side on a mat or the floor. Your body should be in a straight line with your legs extended and feet stacked on top of each other.
- Place your arm straight on the floor under your head or bend your elbow and cradle your head for support. Place your left hand out front for extra support or let it rest on your leg or hip.
- As you exhale, gently raise your left leg off the lower leg. Stop raising your leg when you feel the muscles flex in your lower back or obliques.
- Inhale and lower the leg back down to meet the right leg. Stack your feet again.
- Repeat 10-12 times, then switch to the other side.

Station 5: Planks

- Begin in the plank position, face down with your forearms and toes on the floor. ...
- Engage your abdominal muscles, drawing your navel toward your spine. ...
- Hold this position for 10 seconds.
- Repeat

	
RECOVERY PHASE: Cool down activity Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.	

TOPIC: SPORT		WEEK 6-8
SKILL/S	ACTIVITY	
Sports skills: • Netball- Catching and passing • Hockey- Grip and dribble • Soccer- dribble... passing • Basketball- Lay-up • Rugby- Passing and kicking • Gymnastics- Agility/ rhythmic, floor sequence	INITIAL PHASE: Warm up activity ▪ Joint mobility ▪ Stretching ▪ Preparatory Games/Activities	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills Develop learner posture	Year 4: Term 3	
	Activity 1: Hockey Dribble To dribble is to control the ball with short strokes of the stick while on the move, alternating the ball from the right side of the body to the left side of the body in order to elude defenders. We spoke earlier about the two main types of dribble techniques but there are others. Straight Dribble - the straight dribble allows you to control the ball best and is the most common dribble that players use ... Loose	

Dribble - you continually tap it forward while sprinting ... Indian Dribble - the base of this technique is the continuous pushing of the ball from left to right and back in a rapid fashion ... Dribbling Pull-back - as you straight dribble, rotate your stick to the front of the ball and pull back before continuing forward ... One-handed: Right Hand - it is only suited to wing play, simply run with an outstretched arm and stick keeping the ball close to the hook ... One-handed: Reverse Side - This is similar to the one-handed right-hand dribble but this time, you only execute this if you're on the left side of the field. Using a one-handed reverse grip, position the flat side of the stick forward

Activity 2: Soccer

Passing: this can be done through the push pass, lofted pass, chip pass

Learning the push pass

- Use a push pass for a short direct pass/forward pass.

Place your plant foot even with the ball

Position your plant foot (the foot that will not be kicking and helps to keep you steady) so it faces your target (ball).

Keep your kicking ankle firm and your body over the ball.

Kick using the inside of your foot.

Do this by kicking the ball in the middle to help to keep it on the ground

- Use a lofted pass if you need to get the ball over your opponent's heads. This is done when your opponents are closing in on you and there is no one you can directly pass the ball to.
- Use the chip pass if you have many defenders around you and your teammate is close

The teacher will instruct the learners to play a game and implement all the soccer passes

Activity 3: Basketball

Layup

The Backhand Reverse Layup is used when you have to drive under the rim from one side to the other. You want to avoid going all the way to the baseline because it takes away your good angle. Although you should be able to score using this layup if you started from the baseline, a good drive will not be that low. Start on the right wing in triple threat position ... The foot you start with depends on whether you are getting to the right block in three or four steps, but dribble with your right hand ... Step near the right block with your left foot; from here, make sure to stay above

the block ... You'll be driving from above the block straight to the left side edge of the backboard ... Your right step should put you under the front of the rim, which is where you grab the ball and bring it to your chest ... Step with your left foot toward the edge of the backboard and look up at the basket over your right shoulder ... Jump off your left foot and using a backhand layup shoot with your right hand to the top corner of the square ... The difference in the release here is that you have to snap your fingers toward the basket more and shoot somewhat backwards over your shoulder.

Activity 4: Rugby

Kicking

A **drop kick** in rugby is a type of kick that involves the player dropping a ball and then kicking when it hits the ground, in contrast to a punt wherein the dropper kicks the ball without letting it hit the ground first. An effective dropkick begins with the kicker holding the ball with two hands, positioned on either side of the ball, with the seam of the ball away from the kicker's body, toward the intended target. If the kicker is moving with the ball prior to the intended kick, the player will come to a stop, even for a brief period of time, to ensure that the mechanics of the kick can be executed from a stable body position. The ball

ideally will be angled away from the kicker at an approximate 45° position, with the kicker's arms extended from the body. The kicker will seek to swing the kicking foot through the ball; for this reason, the kicker will first firmly plant the non-kicking foot into the playing surface, so as to maintain maximum stability on impact.

Activity 5: Gymnastics

Floor sequence

Floor exercises in gymnastics refers to movements performed on the floor in an area 12 metres square. This area is covered by some type of cloth or mat, usually with some cushioning. No other apparatus is used. The type of exercise required is a series of movements combining elements of flexibility, strength, jumps, holding of poses, and balance, as well as other manoeuvres. The whole sequence must be performed with rhythm and harmony, and the gymnast must move in different directions, using a major portion of the allotted area. The sequence usually starts and finishes with a series of tumbling movements, such as a handspring or a cartwheel with a half-turn (roundoff), continuing with handsprings and somersaults (in the air), either backward or forward. Between start and finish, balances are held on one leg, handstands are achieved by placing the hands on the floor and kicking to a

standing position, and movements resembling ballet, tumbling movements, and jumps are interposed.

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

TOPIC: GAMES		WEEK 6-8
SKILL/S	ACTIVITY	
• Catching • Throwing • Touching • Hitting • Batting • Kicking • Climbing • Crawling	INITIAL PHASE: Warm up activity • Joint mobility • Stretching • Preparatory Games/Activities	
CORE PHASE: Main activities Skill development is most important. Adequate time is needed to practice new skills	Year 4: Term 3	
	Activity 1: Obstacle course: Learners are divided into 2 groups. Each group has to complete the obstacle course and the time of completion being recorded. Station 1 Learners sprint from a starting point (station 1) to station 2. Station 2 Do 10 jump lunges Station 3 Do double-foot hops across 6 mini-hurdles and comes back in the same way Station 4 Do 10 high knee raises Station 5 Balance the beanbag on your head and walk to the next station with both arms stretch out. Station 6	

Crawl underneath 4 chairs to the other side and do a cartwheel at the end.

Station 7

Climb over and crawl under 4 tables

Station 8

Skip 10 times with the rope

Station 9

Walk across 2 exercise benches

Station 10

Complete 10 squat jumps

And sprint to the finish line.

Activity 2: Mini Netball

Speed, fitness and warm-up drills.

Game: Rob the nest

Getting started:

- Divide players into 4 teams.
- Place the “eggs” at the centre circle of the court or “nest”. The “egg” can be a bean bag or tennis ball or any other object, but not ball to avoid encouraging beginners to run with them during practice or games. The nest can a hula hoop.
- Each team start at their designated corner of the court.
- One person from each team must run to the centre of the court, retrieve an “egg” and return it to their team zone. (Hula Hoop). Once they return, the next team member may dash for another “egg” once tagged by the team member in play, taking turns to repeat the process as a relay.
- When all the “eggs” have been robbed from the centre of the court, teams can steal the “egg” from their rival teams until time runs out. The team with the most “eggs” wins.

Activity 3: Mini hockey

Mini hockey drills

- Keeping the ball control while standing on top of a cart. One learner stands with a hockey stick and a ball, whilst the other learner pushes the cart. The learner on the cart must dribble the ball and let it not fall from the moving cart.
- Two learners must be opposite sides of the ramp. One learners will hit the ball across the ramp towards the other learner
- Use a ramp and let the ball jump across forcing the players to improve their aerial receiving skill

Activity 4: Mini Soccer

Foot control and coordination

- Mini soccer balls will help you get used to kicking a smaller target, making it easier for you to control a soccer ball.

Some drills to complete:

- **Kicking the min soccer ball between your feet.** This is called “bells” or “foundation”. The ball moves quickly back and forth using the insides of your feet. This drill can also be done with a tennis ball.

Juggling the ball between your feet.

- To juggle, use a specific route while keeping the ball in the air-such as using the left foot only, the right foot thigh, right foot only and so on.

Passing the ball to another player.

- Kick the ball to another player with your feet.

Kicking the ball between miniature cones.

- Kick the ball with your feet through miniature cones that are place around the field.

link: mini soccer rules
<https://bit.ly/3viYNKi>

Activity 5: Touch rugby

Acceleration and chance of direction

Place a marker at 10 meters and then 5 meters out to the left and right. From a rolling start, sprint forward to the 10-meter marker as fast as possible and then cut a left or right and accelerate again to the next marker. Try not to slow down when you change direction. Walk back to the start and then repeat. Do 3-5 sets, resting 2-3 minutes between sets.

Sprint Medley

This workout takes you through a range of sprints to develop short, medium and long distance sprints as well as increasing sprint endurance. After all you don't just sprint once in touch rugby, you have to be able to sprint again and again, even as fatigue sets in.

10x15m sprints

8x25m sprints

6x40m sprints

4x70m sprints

Walk back and recover as needed.

[link: touch rugby rules](https://bit.ly/357LMsp)

<https://bit.ly/357LMsp>

Activity 6: Mini basketball

[link for mini basketball rules](https://bit.ly/3BS6VCN)

<https://bit.ly/3BS6VCN>

Knock-out

Equipment:

Two basket balls

Two or more players form a line at the free throw line with the first two receiving basketballs

The first player shoots and if he/she misses, the second player can “knock out” the first player by making the basket.

If the first player is able to make the shot before the second player, they pass it to the next player in line, who then tries to knock out the second player, while the first player returns to the end of the line.

Activity 7: Gymnastics pyramids:

Shoulder Sit

Activity 7.1

The teacher instruct learners to do the following:

- A shoulder sit requires **one base**, a **spotter** and a **mounter**.
- **The base** should assume a side-lunge position -- which side is up the mounter and the base.
- **The mounter** should stand behind the base. The mounter should place her foot on the thigh of the base. She should then stand up straight and swing her leg over the other shoulder of the base. Once the leg is secure, swing the leg up off the base's thigh onto her other shoulder. Legs should be tucked behind the back of the base, and the back of the mounter should always remain straight.
- **A spotter** can be used to hold onto the waist of the mounter as she positions herself on the base.

Activity 7.2

Double Base Elevator

- A double base elevator is a fairly simple cheerleading pyramid.
- This pyramid requires two bases, a mounter and a spotter.
- Bases stand facing each other. Bases should bend their knees and hold their hands out in front of them palm side up.
- The mounter uses the bases' shoulders for stability and support as she jumps into the hands of the bases.
- The bases will then bring their hands up to chin level -- bases should be very close in height. The mounter will straighten her legs and stand straight up.
- The spotter will grab the ankles of the mounter for support.

Activity 7.3

Elevator

- An elevator, also known as a half-elevator or an extension prep, should be attempted only after consistent mastery of a thigh stand has been exhibited.
- When learning an elevator, use two main bases, a top person and a back base. After mastering this stunt, you can do it without a back base.
- The top person jumps into the hands of the main bases while the back base supports her by grabbing her waist.
- Bases dip down and lift the top person up to stand on their hands, which are held just under their chins.
- The back base steadies the top person by pulling up on her calves.

Activity 8

Traditional dance: Pantsula

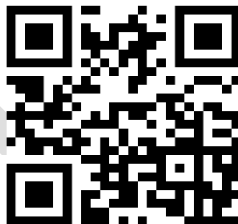

Pantsula took its early influences predominantly from tap dance, with traces of jive, gumboot, tribal African dance and everyday gestures like dice-rolling. Its trademark is intricate, **on-the-spot rhythmic footwork, where feet twist, shuffle and stamp**. The central theme of pantsula is to transform the smallest gestures of everyday life into choreography that's both realistic and theatrical. It is characterised by quick, darting steps in geometric lines with an uneven rhythmic quality. One type of the pantsula is highly rigorous. In this type, the arms remain wrapped around an upright torso while the feet move in extremely fast and particular shuffling and jumping movements as groups of dancers move in and out of geometric formations. This form requires good physical command of the body.

RECOVERY PHASE: Cool down activity

Coordinated group or individual cool-down and stretching exercises to reduce heart rate and breathing. On command (whistle, clap) learners do breathing and stretching exercises.

5	Mini-basketball https://bit.ly/3BS6VCN 		

GLOSSARY

Aerobic Exercise	Steady activity in which the heart can supply all the oxygen the muscles need. Any activity that uses large muscle groups, can be maintained continuously and is rhythmic in nature
Agility	The ability to change direction and position of the body with speed and control.
Balance	The ability to maintain equilibrium when stationary or moving (not to fall over) through the coordinated actions of our sensory functions
Balance – Static	The ability to retain the centre of mass above the base of support in a stationary position
Balance – Dynamic	The ability to maintain balance with body movement
Bench Press	Lay on bench, flat on back. Press weight-bar from chest to full extension
Bleep test	The test to measure cardiovascular endurance
Body composition	Body composition is the amount of fat tissue in the body
Body mass index (BMI)	How to measure body composition – skin fold test
Cardiovascular Endurance	The ability to keep working for long periods of time without getting tired (fatigue). Cardio-respiratory endurance is the ability of the body's circulatory and respiratory systems to supply fuel and oxygen during sustained physical activity.
Control	The ability to control the movement of the body in co-operation with the body's sensory functions, e.g. catching a ball (ball, hand and eye co-ordination)
Co-ordination	The ability to move one or more body parts at the same time There are a number of different types of skills: • Cognitive or intellectual skills that require thought processes • Perceptual – involving interpretation of presented information • Motor – involving movement and muscle control

	• Perceptual motor – involving the thought, interpretation and movement skills A learner tossing a ball into the air and striking it with a racquet or hand
Circuit Training	Training that uses a circuit of exercises around a number of different workstations. Perform each exercise a certain number of times (10 reps) or for a certain length of time (60secs)
Cool-down	A cool-down activity brings the mind and the body back to a relaxed state. Helps to reduce the risk of injury.
Core	Muscles in your abdomen and back that are attached to your spine and pelvis. Core strength refers to the strong muscles around your torso
Core exercises	Abdominal crunches, sit-ups and push-ups
Dance	Taking a series of rhythmical steps (and movements) in time to music
Elevation	Elevation is the upward movement of structures of the body, e.g. elevation of a shoulder joint raises the corresponding arm vertically upwards
Endurance	Endurance means the general ability to do any kind of physical activity that increases the heart rate. Endurance exercises improve the health of your heart, lungs, and circulatory system
Exercise	Purposeful physical activity that is planned, structured and that improves or maintains personal fitness
Fairness	Fairness within physical education: • Taking turns • Sharing equipment and apparatus • Recognising and accommodating the different abilities of their peers • Accepting anyone can take part regardless of their race, religion, gender or sex
Fine Motor Skills	Fine motor skills refer to the coordination between small muscle groups, like those in their hands, wrists, and fingers in coordination with their eyes

Fitness: Health-related	Cardiovascular endurance, muscular strength, muscular endurance, flexibility and body composition
Fitness: Skills-related	Agility, balance, speed, power, reaction time, coordination
Flexibility	Flexibility, mobility and suppleness all refer to the range of limb movement around joints
Formations	Formations in the PE class are about maximising space, utilising activity design and using layouts that will arrange learners in ways that will enhance teaching, learning and participation. Formations: lines, rows, circles, semi-circle, dispersed, individual, paired, seated etc.
Frequency	How often you do the activity
Fundamental movement skills	Fundamental movement skills (FMS) are the basic movements traditionally associated with physical activity. The most common FMS include running, jumping, throwing, catching, skipping, and hopping. It involves different body parts such as feet, legs, trunk, head, arms and hands
Gallop	A two-beat stride during which both legs are off the ground simultaneously, either right foot stays back and left foot is forward or left foot stays back and right foot is forward, toe-to-heel
Games	A game is an activity or sport usually involving skill, knowledge, or chance, in which you follow fixed rules and try to win against an opponent
Gross motor skills	Gross motor skills involve the large muscles in the arms, legs and torso. Gross motor activities are important to everyday physical activities like walking, running, throwing, lifting, kicking, etc.
Health	Is a state of complete physical, mental and social well-being
Hopscotch	A popular playground game in which learners toss a small object, into numbered pattern of rectangles outlined on the ground and then hop or jump through the spaces and retrieve the object. It is a game that can be played with several learners or alone. Hopscotch is a physical and cognitive workout

Indigenous games (traditional games)	Are recreational activities that originated from a particular cultural group or community. Some of these games have become very competitive
Invasion games	Teams score when they move an object (ball) into the opposing team's zone and successfully attack that team's goal or target area. Tactical problems related to invasion games include maintaining possession, attacking and/or defending a goal, winning the ball, etc. Examples of invasion games include netball, basketball, football, rugby and hockey
Joint mobility	Joint mobility refers to the movement around a joint. Having a full range of motion means you have healthy joints. However, if you have difficulty with your range of motion, it could indicate an underlying problem or be the result of an injury
Loco-motor skills	Motor skills in which the feet move the body from one place to another (Walking, Running, Hopping, Jumping, Skipping, Galloping, Sliding, Leaping)
Lunge	A lunge can refer to any position of the human body where one leg is positioned forward with knee bent and foot flat on the ground while the other leg is positioned behind.
Manipulative skills	Movement skills that require an ability to handle an object or piece of equipment with control. They include skills such as kicking, striking, dribbling or catching a ball. Can also be referred to as 'object control skills'
Midline crossing	Crossing the midline happens when your child moves their hand or foot across this line to work on the opposite side of their body. Before crossing the midline happens, a child will typically use only one side of their body at a time.
Modified sport	It can take various forms but are generally designed to be an introductory or more accessible version, of a sport. The sport is adapted to allow for people with mobility issues or different skill levels to participate. Modify the equipment and rules of the sport to match the developmental stage of the learners e.g. mini-volleyball, mini-cricket etc.

Muscular strength	The ability to exert a large amount of force in a single maximum effort
Muscular endurance	The ability of the muscles to perform physical tasks over a period of time without becoming tired (fatigue)
Non-loco-motor movement	Non-loco-motor skills are fundamental body movements that do not involve travelling. They are stability skills that include movements of limbs or body parts, and sometimes even the whole body. There are many different non-loco-motor movements, including: bending, stretching, lifting, raising, twisting, turning and rotating
Obstacle course	An obstacle course is a series of challenging physical obstacles an individual or team must navigate, usually while being timed. Obstacle courses can include running, climbing, jumping, crawling and balancing elements with the aim of testing speed, endurance and agility
Physical Literacy	Individuals who are physically literate move with competence and confidence in a wide variety of physical activities that benefit the healthy development of the whole person
Posture	The position in which someone holds their body when standing or sitting. To improve posture regular exercise and stretching is important
Power	The ability to produce a large amount of force in one action. To undertake strength performances quickly
Press-up	Start in a high plank position with your palms on the floor at shoulder width. Keeping a tight core, bend your elbows, descending until your chest grazes the floor. Push yourself back up while exhaling, maintaining a straight back.
Reaction time	The time between the presentation of a stimulus and the onset of movement
Recreation	An activity done for fun (enjoyment)
Relay	A race between teams in which each team member covers a certain part of the course (normal exercise, athletics, swimming)
Respect	Respect within physical education:

	• Caring for equipment and apparatus • Celebrating others' successes, including of opponents • Listening to teachers' instructions • Listening and responding to others' ideas • Understanding everyone has a right to take part regardless of ability
Rotation	Rotational skills range from simple leaps with turns to more complex acrobatic manoeuvres and artistic flight elements with rotations about the body axes
Safety	Safe practice should be an integral part of all aspects of physical education and sports, at all ages and levels of ability. Accidents do happen, as the nature of physical activities leads to a greater potential risk
Shuttles	A physical exercise, drill or endurance activity involving repeated runs/sprints to and fro, between marked points or lines
Sit ups	Lie flat on your back with fingertips behind your head, knees bent, legs together and feet flat on the floor. Elbows should be in line with ears. Raise upper body until you are upright -one should feel the abs tighten
Speed	Speed, as it will be defined in PE, is the rate (time) at which a person or object moves
Sport	An activity involving physical exertion and skill in which an individual or team competes against another or others for entertainment. The Sport is usually governed by a set of rules, which serve to ensure fair competition and allow consistent adjudication of the winner
Squat	A squat is a strength exercise in which the trainee lowers their hips from a standing position and then stands back up. During the descent of a squat, the hip and knee joints flex while the ankle joint dorsi-flexes; conversely the hip and knee joints extend and the ankle joint plantar flexes when standing up.
Squat jumps	Start standing with feet hip distance apart and lower into a squat position by bending the knees. Keep the spine straight, chest lifted, and knees behind toes. Arms are in front of the chest for

	balance. Jump straight up and swing arms overhead. Return to squat.
Star jumps Jumping jacks	Physical jumping exercise performed by jumping to a position with the legs spread wide and the hands going overhead, sometimes in a clap, and then returning to a position with the feet together and the arms at the sides
Strength	The ability of a muscle or muscle group to overcome a resistance
Stretches	Stretching is a form of physical exercise in which a specific muscle or tendon is deliberately flexed or stretched in order to improve the muscle's felt elasticity and achieve comfortable muscle tone. The result is a feeling of increased muscle control, flexibility and range of movement
Target games	Target games are those in which players send an object (a ball or dart) towards a target area. Sometimes this may also involve avoiding obstacles, defending, guarding or blocking the path of the opposition's ball to stop them from scoring
Technique	A technique is the way of performing a skill
Torso	The main part of your body, not including your head, arms and legs
Warm-up	A warm-up should involve a gradual increase in the heart rate and breathing rate, a slight rise in body temperature, and prepare the mind and the body for physical activity. Helps to reduce the risk of injury.
Water safety	Always swim with a partner. • Know your limits • Swim in safe areas only • Swim parallel to the shore • Be careful about diving • Watch the sun • Drink plenty of liquids • Avoid getting too cool • Alcohol and water never mix
