Accumulate ideas and design a slogan for safety in the Art Class

Chapter 1

Centre Orientation

Safety

Dear Learner, by the end of this lesson on safety you will be able to:

- Understand what is expected from you to keep yourself safe in the classroom
- How to handle tools in the classroom
- What to avoid and be careful off

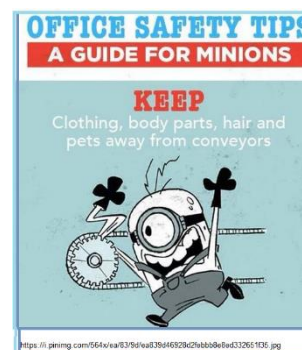

Rules: Workshop safety and responsibilities

Workshop safety is everyone's responsibility and the following rules have been put in place to ensure the safety of all learners and teachers. Please read the safety rules thoroughly before entering the workshop.

Conduct

1. **Only enter** the workshop when requested to do so by the teacher.
2. **Learners** under the influence of **drugs or alcohol** are not permitted in the workshop.
3. Learners with any **health problems** that may affect safety in the workshop (medication, epileptic fits, etc.) must report these conditions to the teacher.
4. Be responsible, careful, and alert **AT ALL TIMES** in the workshop.
5. **DO NOT work alone** in the workshop, or without a teacher present.
6. **DO NOT bring food**, drinks, candy, or gum into the workshop.
7. Store bags, backpacks, and clothes well out of the way before going to work areas. Only get out items and get into storage areas as directed
8. **Follow all instructions** precisely and carefully. If you do not understand a direction or a part of a procedure, **ask the teacher** before proceeding.
9. Perform **only** those activities assigned or permitted by the teacher. "Activities" include touching and using materials, equipment, tools, and machines, and doing projects, or anything else in the workshop. When in doubt, **ask the teacher** before acting.
10. **DO NOT wander** around the workshop, distract, or interfere with others. Stay at your work area unless permitted to move.
11. Keep well clear of any person operating tools and machinery. Do not even talk to the operator as this may cause distraction. Bumping an operator could cause serious injury.
12. Never **remove anything** from the workshop without permission.
13. Horseplay, fooling around, practical jokes and pranks are **NOT** tolerated in the workshop. Learners making themselves guilty to this will have to leave the workshop immediately.
14. Do not run, rush around or throw objects around in the workshop.
15. **DO NOT enter any "Red Zone"** storage areas or special work areas unless specifically permitted, supervised, or trained by the teacher. Be **extra** careful when in these areas.
16. **All materials and equipment** should be **treated with care and respect**. Read all labels, manuals, and activity instructions, and do not hesitate to ask the teacher for guidance.

17. **All** tools, chemicals, and unknown substances should be **considered dangerous**. **DO NOT** touch, taste, or smell any substance unless clearly instructed to do so. Keep hands away from face, eyes, mouth, and body while using tools, chemicals, paints, or biological materials. Wash hands after handling such items.
18. Point away from your body when cutting, brushing, or spraying. **DO NOT** use any tool or machine which you are not trained to use. If you feel uneasy or unsafe to use it, inform the teacher.

Clothing

19. **Safety wear** (goggles, aprons, gloves, shoes, etc.) may be required for certain activities. Goggles should be worn **whenever** you use dangerous tools or chemicals or are near such use. If you are required to wear any safety equipment, you must **keep it on**.
20. **Adjust your attire** for a “hands-on” activity:
- Long hair (including fringes), dangling ties, rings.
 - Loose jewellery or loose / baggy clothing must be removed.
 - Secured, tied back, or tucked away.
 - Open-toe footwear is not safe.

Cleaning the Art and Crafts Room

21. **Clean up** after yourself and **put things back** where they belong (which should be where you found them). Keep the work area and floor area clean, clear, and organized. Push chairs under the tables.
22. After handling dangerous or dirty items, **wash** your hands with soap and water (for at least 10 seconds). Do so even if you were wearing gloves.
23. **Properly dispose** of trash and waste. Recycle paper!

24. Sinks are to be used **only** for water and water-based liquids, as approved by the teacher. **DO NOT** put anything solid in the sinks.

Accidents

25. Stand up when doing practical work so that you can move away quickly if needed.
26. If you are scalded, burnt or a chemical splash on your skin, wash the affected part immediately with lots of water. Report this, and any cuts or abrasions to the teacher without delay.
27. **Immediately report** any accident (spillage of any substance), breakage, malfunction or unsafe condition to the teacher, no matter how small. **DO NOT** clean up spills without direction. **DO NOT** handle broken glass. **DO NOT** attempt to “fix” anything.
28. **Know the location** and proper use of all safety equipment (especially fire extinguishers and fire blankets), alarm systems and exits.

Please DO NOT write in this book

Your teacher will hand out a safety agreement to you, that you can then read and sign.

Safety Agreement**Learner:**

I have received and understand the **Safety & Responsibility Rules** and agree to abide by them.

(Print name)

(Signature)

(Date)

Parent or Guardian:

I have received and understand the **Safety & Responsibility Rules** and agree to support my child and teacher in maintaining a safe and orderly workshop environment.

Safety Guide for Art Studios

Safety is everyone's responsibility and if you do not follow the safety rules carefully, it could result in physical injury or illness or initiate fires. That is why it is essential for artists to understand studio hazards and how to protect themselves and those working around them.

You can organize these hazards under the following headings:

- Chemical Hazards
- Product Labels
- Fire Hazards
- Physical Hazards
- Ventilation
- Protective Gear
- Emergency Preparedness

Chemical Hazards

1. It is very important that you must understand the hazards inherent in the art materials you use such as:

- Toxic content
- Flammability
- Reactivity
- Appropriate precautions to protect against illness or injury.

2. Find Out About the Hazards of the Materials You Are Using:

Two good, immediately available sources of health and safety information are:

Product Labels

All chemical products must be labelled with:

- The common name of the chemical or product.
- The name, address, and emergency phone number of the company that manufactured the product:
- An appropriate hazard warning which may include words such as **DANGER**, **WARNING**, or **CAUTION**.

DANGER is reserved for products that have serious health or safety hazards associated with them, such as being highly toxic, or flammable.

WARNING and **CAUTION** are used on less hazardous substances.

- Most labels provide additional safety information including:
- **A list of specific potential hazards associated with:**

- ✓ The material
- ✓ Protective measures to be used when handling the material
- ✓ Personal protective equipment or clothing that should be worn
- ✓ First aid instructions
- ✓ Storage information
- ✓ Procedures to follow in the event of a fire, leak, or spill.

- “Nontoxic” may also contain chemicals for which there are no chronic toxic data.
- Use all art products with care!

Fire Hazards

The fire hazards associated with artist’s materials are often overlooked, yet fire may be the greatest risk an artist face.

Common art materials that may cause a fire include:

- Flammable or combustible solvents.
Flammable solvents should be stored in a storage cabinet designed for flammable materials.
- Oily rags
- Chemical oxidizers

- Compressed welding gases

- Improper use of solvents causes most Art related fires

- Fires and electrical shock may be caused by overloaded electrical circuits and tangled extension cords.

Physical Hazards

Physical hazards in the arts include:

- Improperly maintained equipment.
- Poor storage and process management.
- Injury arising from carelessness and inattention.
- Wet and slippery floors and work surfaces may lead to physical injury.

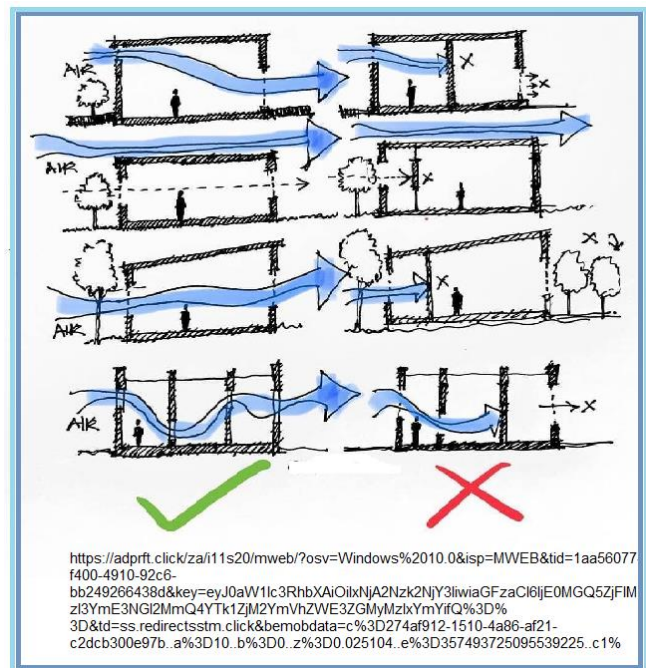

NEVER run or chase fellow students around!!!

Know your school's safety rules and follow it.

Ventilation

- Ensure proper ventilation when working with solvents and cleaning materials.
- Make sure windows and doors are open to allow enough fresh air to circulate.
- When using spray paint or strong solvents, work outside.
- Use a fan to circulate airflow if necessary.

Protective Gear

- All students should wear an overhaul or an apron to prevent soiling of clothes.
- It is considered a serious offence to smear or splash paint, dirty water or any other agent or solvent on a fellow student.
- Gloves and safety goggles or glasses should be worn when working with agents that can damage the skin or eyes of a student.
- Use a face mask to protect you against odours and viruses
- Wash your hands regularly and sanitise as often as possible

Emergency Preparedness

Studios should have fire extinguishers and first aid kits close at hand. Know where this equipment is located and how to use it.

Get to know the appropriate emergency response.

Conclusion

Safety should be a constant focus in the class and the daily responsibility of all students!

**Activity 1****Safety**

You will complete this activity in your workbook.

Please DO NOT write in this book.

- Answer the following questions on workshop safety.
- 1. Name the two immediate sources of health and safety information available to the user of chemicals. (2)
- 2. What is the difference between DANGER and WARNING / CAUTION on a label of a product? (3)
- 3. What causes art related fires? (6)
- 4. What can learners do to prevent physical hazards in the classroom? (1)
- 5. Why do we need to keep the art class well ventilated? (2)
- 6. How can you protect your clothes during the time you spend in the art class? (1)

Total:15

**Poster**

You will complete this activity in your visual diary.

Please DO NOT write in this book.

- Look at the warning labels/signs we have just discussed.
- Now you must create your own warning label/sign for safety in the Art Class.
- Use this warning sign in a poster that you will draw in your visual diary.
- Please do not make your drawing in this book.

Chapter 2

TOC (Technical Occupational Curriculum)

1. Accumulates ideas for design of craft product.
- 2. Identifies and prepares materials, tools, and equipment for design/craft production.**
 - Identifies and selects the appropriate *materials* for production of design/craft products.
 - Identifies and selects appropriate *tools and equipment* for production of design/craft products.
 - Prepares materials for production of design/craft products.
- 3. Makes marketable design/craft product.**
 - Collects documents and interprets objects and/or ideas through drawing.
 - Uses and applies elements and principles of art.
- 4. Makes marketable design/craft product.**
 - Uses tools and materials to produce design/craft products.
 - Produces craft products with specific materials.
 - Produces craft products in line with given designs.

Visual Literacy

Dear learner at the end of this chapter you will be able to:

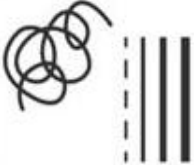

- To use art elements and design principals in your design
- To analyse artwork critically
- Express yourself in an abstract design in a 2D design
- Be able to think creatively in an abstract manner
- You will complete Activity 4 in your workbooks and or classwork books

Recap of the previous year's work

- The elements of art are the basic components of art-marking.
- It is impossible to create a work of art without using at least one of the elements of art.
- To be successful in art creation, an artist must be able to intelligently use the elements of art.
- Artwork can also be analysed according to the use of the elements in a work of art.

The Elements of Art

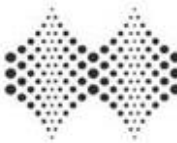

The building blocks of making art

Line		A line is a path made by a moving point through space. It is one-dimensional and can vary in width, direction, and length.
Shape		Shapes are flat, enclosed areas that are two-dimensional (length and height). Artists use both geometric and organic shapes.
Color		Color is perceived by the way light reflects off a surface. There are three properties of color: hue (color name), intensity (strength/purity), and value (lightness and darkness).
Value		Value describes the lightness or darkness of a surface.
Texture		Texture describes the surface quality of an object. Artists use both actual texture (how things feel) and implied texture (how things look like they feel).
Space		Space is used to create the illusion of depth within an artwork. It can also refer to the positive and negative space between, around, or within objects.
Form		Forms are three-dimensional (length, width, height) and can be viewed from many angles. Forms have volume and take up space.

The Art of Education | www.theartofed.com

The Principles of Design

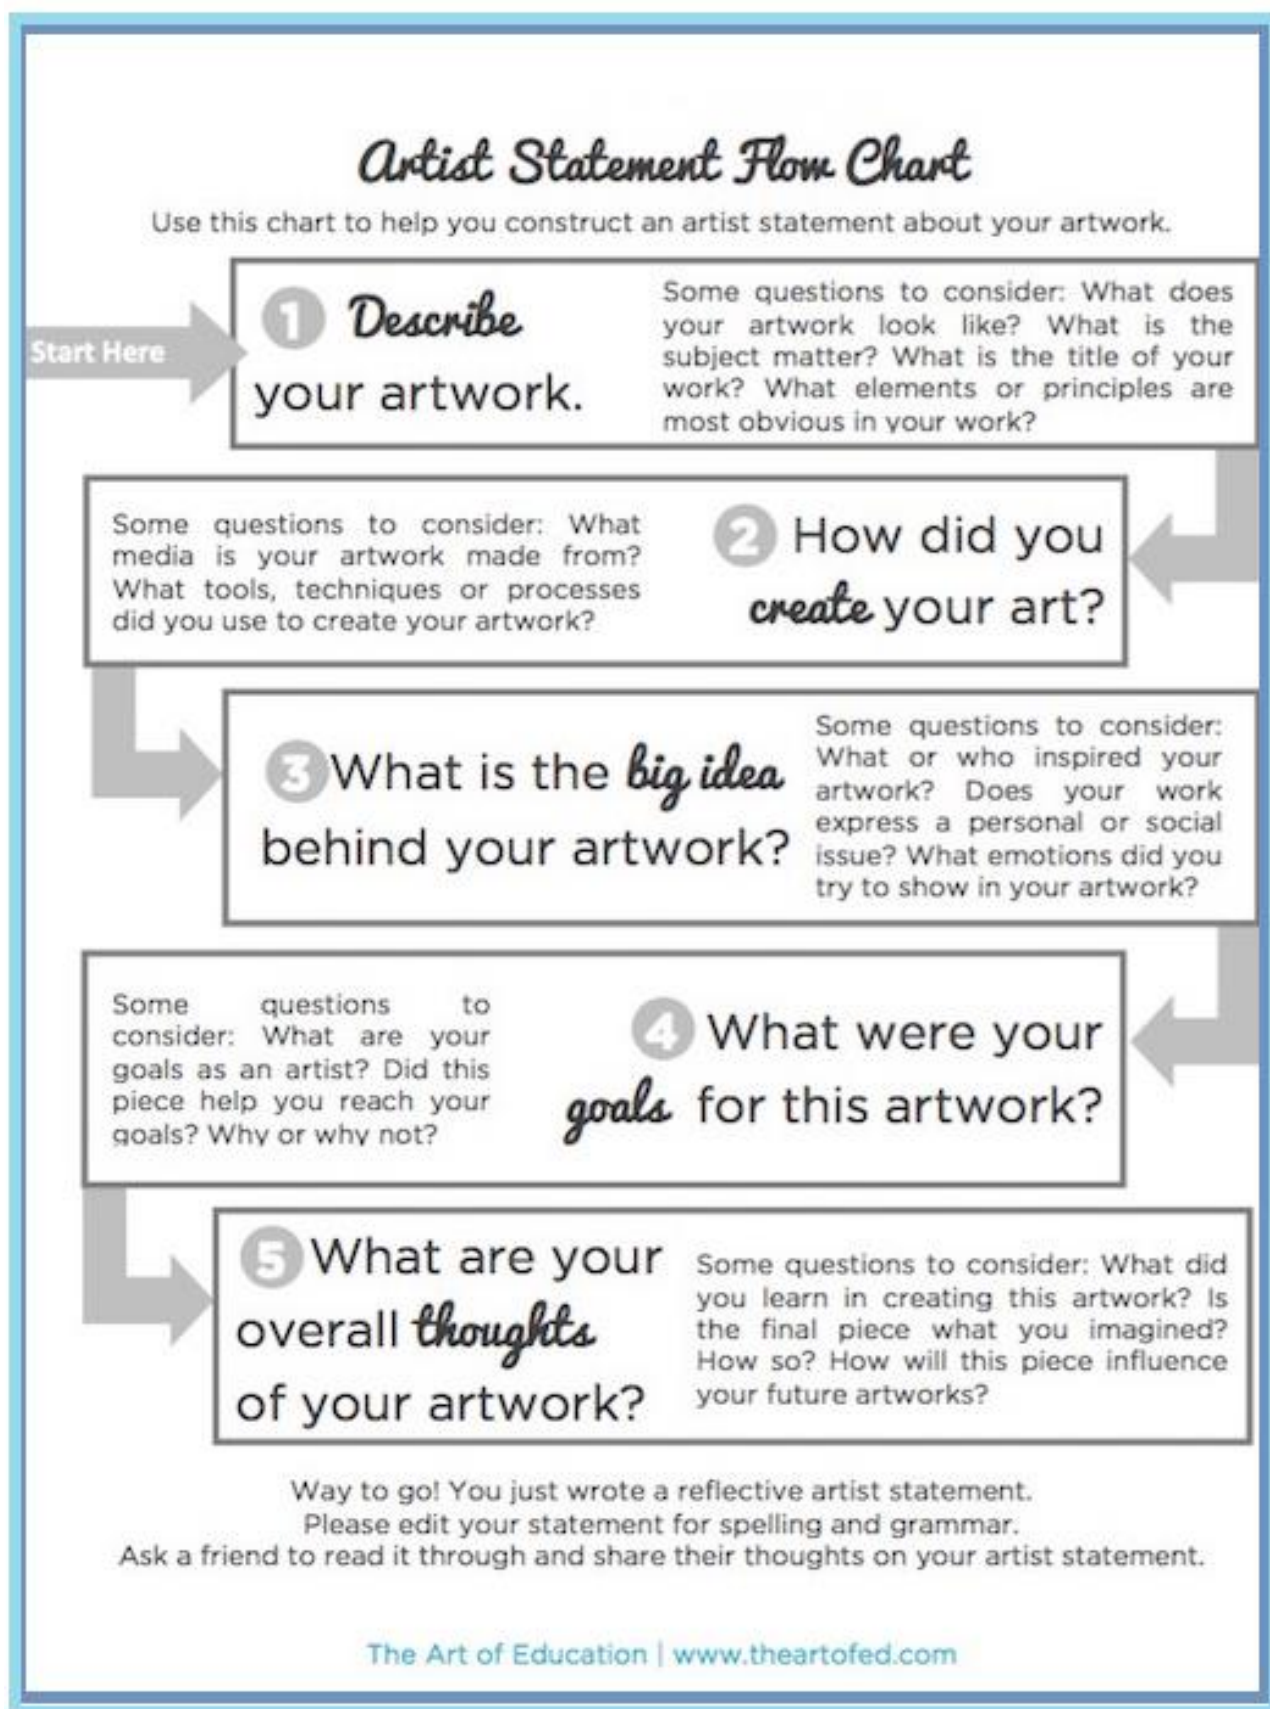

The tools to plan and organize artwork

Balance		Balance is the distribution of visual weight in an artwork. The three types of balance are symmetrical (two sides are the same), asymmetrical (two sides are different but visually weighted equally) and radial (design emerges from center point).
Contrast		Contrast is the difference between elements in a composition. This can happen through a variety of elements such as value change, size difference, etc.
Emphasis		Emphasis is the creation of a focal point in an artwork. Emphasis draws the viewer's eye to particular areas of the artwork first.
Pattern		Pattern decorates the artwork with regularly repeated elements such as shapes or color.
Unity		Unity means that all elements within the artwork are in harmony. Variety within elements adds interest to the composition.
Movement		Movement is how the eye travels through an artwork. Movement can lead the viewer from one aspect to another within the composition.
Rhythm		Rhythm is the regular repetition of elements such as line, shape and forms to create interest and consistency.

The Art of Education | www.theartofed.com

How to analyse an artwork

 Activity 3**Analyse the painting**

You will complete this activity in your workbook.

Please DO NOT write in this book.

1. Study the artwork.
2. Look for the **elements of art** as well as the **principles of design** in the painting.
3. List and discuss the elements and principles that you identify.
4. What do you think the artist wants the viewer to think and feel when looking at this painting?
5. List some interesting facts about the painting.

<https://media-cdn.tripadvisor.com/media/photo-s/0e/d9/cf/86/pop-arts-painting-lady.jpg>

**Activity 4****Creating in 2D****Visual diary****Homework**

You will complete this activity in your visual diary.

Please DO NOT write in this book.

Dear learner, by the end of this activity you will be able to:

- Create your own product and know what is necessary to make a good artist impression in your visual diary.
- Use the elements of art and design principles effectively.

Resources**Gather some basic art journaling supplies**

- Use your visual diary.
- Black permanent artist pen.
- Paint - acrylic and or watercolour are good choices.
- Pencil.
- Eraser.

Instructions

- Your theme is: **“You”**
- Designs and decorate a page in your visual diary with this theme.
- Keep the following in mind to help you:
 - Name and surname
 - Family tree
 - Who am I?
 - Family Dynamics (Mom is the loving one, dad is the strict one etc.)
 - My good qualities and features
 - My bad qualities and features
 - What do I believe in?
 - Hobbies and sport.

Step 1

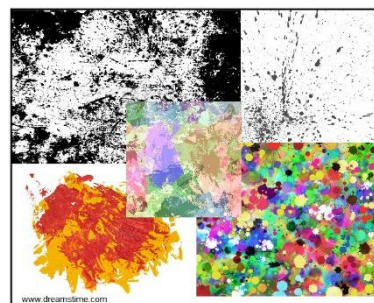

Make a Background

- A beautiful background is always a great place to begin.
- The visual diary can feel a lot less intimidating when you are not staring at a white page.
- Choose your background carefully.

Here are a few ideas to considerate before you start:

Messy Acrylic Background

- You must just be able to scribble with paint.

Tissue paper technique

- All it requires is tissue paper, a brush, and water. It is simple and fun.
- Take coloured tissue paper and make a pattern that you like, on your background page.
- Spray with water, this will cause the tissue paper to bleed into the page. Staining it.
- Remove and wait for it to dry.

Watercolour Dots

- Wet the entire page with water, and then brush on purple watercolour paint.
- Next make “dots” with your watercolour brush of blue and purple all over the circle until it is filled with colour.

Step 2

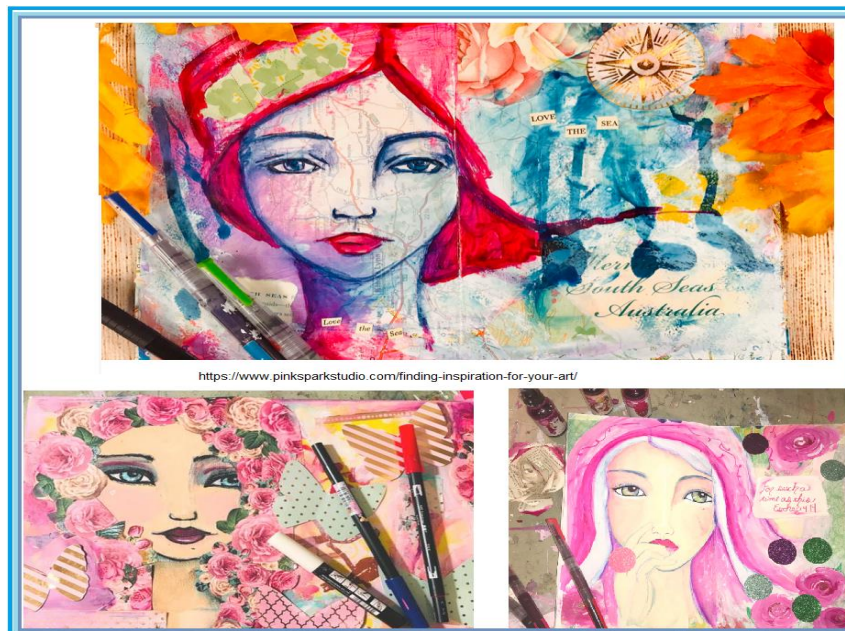

Choose a theme for your page and create!

- Once you have a background, you have a great base upon which to layer images and/or text.

Here follows a list of examples you can use to start off your journal.

Please remember you cannot copy these samples because it will be plagiarism.

- Create a collage

**Activity 5****Visual Literacy**

You will complete this activity in your visual diary.

Please DO NOT write in this book.

1. Find different pictures that you like/ catches your eye in magazines.
2. Make a collage with all the different bits and pieces.
3. All the elements of art must be included in the collage.
4. Give a description of the finished result - explaining what principles of design were used and where the elements of art are. (E.g., what types of lines, texture, balance, etc.)
5. Be creative and have fun.

**Colour**

By the end of this activity, you will be able to:

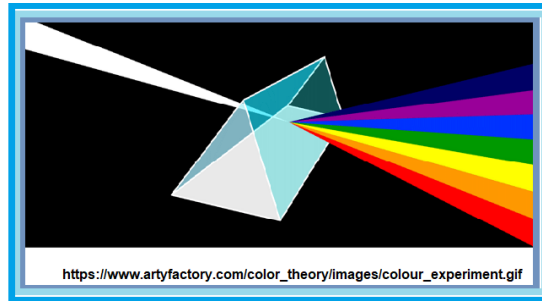

- Understand colour and how it works.

- Colour is an **element of art** that refers to reflected light.
- Colour theory is defined as a **theory** because it cannot be proven.
- Theories are generally accepted, even if they **cannot** really be proven.
- Laws are accepted because they **can** be proven.
- More than 300 years ago the famous scientist **Isaac Newton**, experimented with light and colour.
- He developed the colour wheel by taking the colour spectrum and bending it into a circle.
- One of the things he experimented with was a prism.
- When a white light beam goes through a prism, the light beam divides up into the seven colours of the rainbow.

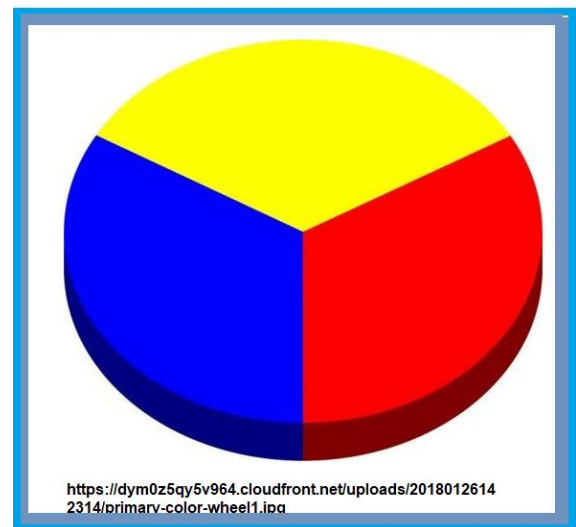

- Objects reflect light. They reflect different parts of the spectrum.

Example: When white light falls on an orange, it seems orange because it reflects the colour orange, and it absorbs all the other colours of the spectrum.

Primary colours

- The **primary** colours are red, yellow, and blue.
- They are called primary for a couple of reasons.
- First, no two colours can be mixed to create a primary colour.
- Primary colours can only be created by using natural pigments.
- All other colours found on the colour wheel can be created by mixing primary colours together.

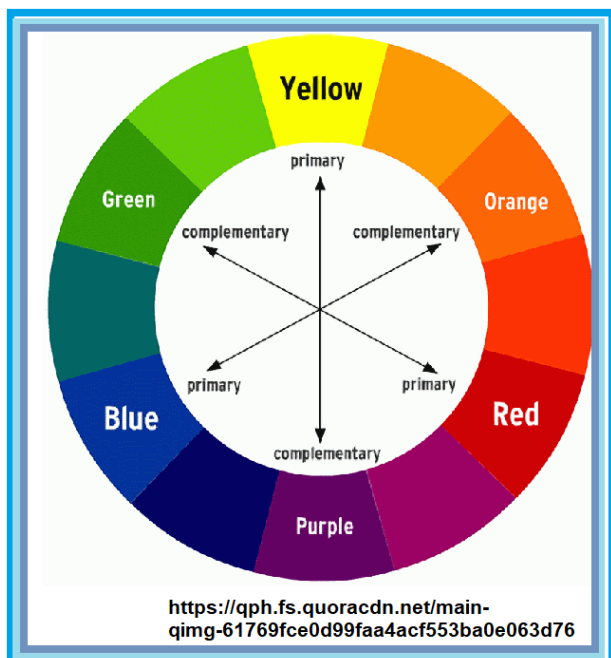

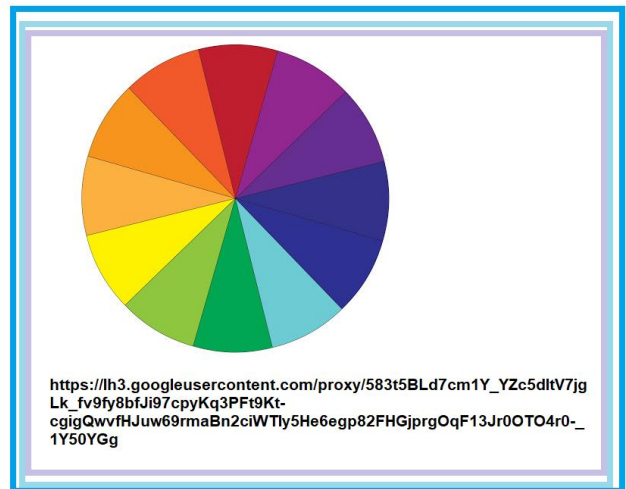

Secondary Colours

- The **secondary** colours are orange, green, and purple.
- Secondary colours are created by mixing equal parts of any two primary colours.
- Yellow and blue will give you green.
- Red and blue will create purple (violet). Red and yellow will give you orange.

Tertiary Colours

- **Tertiary** colours are created by mixing equal parts of a secondary colour and a primary colour together.
- There are six tertiary colours:
 - red-purple, red-orange
 - blue-green, blue-purple
 - yellow-green, and yellow-orange.
- Notice that the proper way to refer to tertiary colours is by listing the primary colour first and the secondary colour, second.

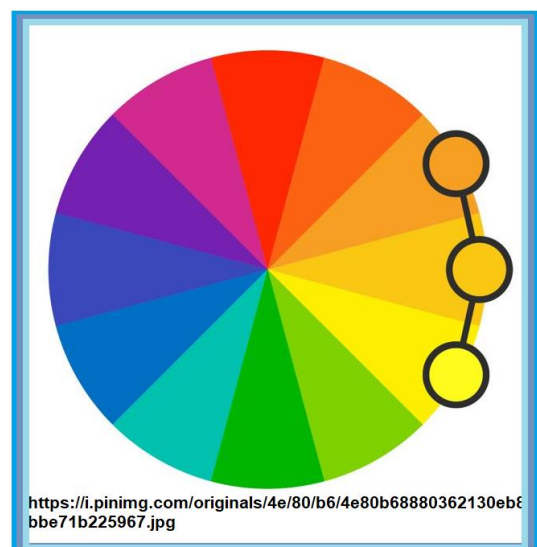

Complementary colours

- **Complementary colours** are pairs of colours which, when combined or **mixed**, cancel each other out (lose **hue**) by producing a **grayscale** colour like white or black.
- When placed next to each other, they create the strongest contrast for those two colours.
- Complementary colours may also be called "opposite colours."
- They are across each other on the colour wheel. Blue and Orange, Red and Green, Yellow and Purple

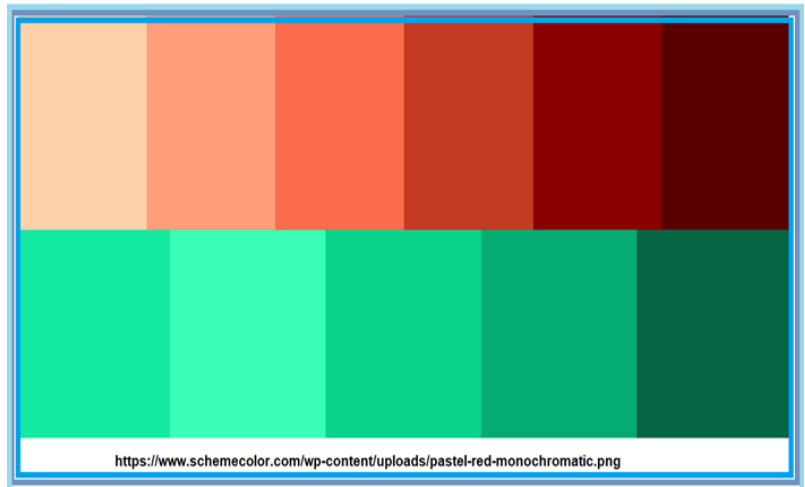

Analogous colours

- **Analogous** colour schemes use colours that are next to each other on the colour wheel.
- They usually match well and create serene and comfortable designs.
- Analogous colour schemes are often found in nature and are harmonious and pleasing to the eye.

Monochromatic Scheme

- These tone-on-tone combinations use several **shades** (adding black) and **tints** (adding white) of a single hue for a subtle colour palette.
- Think pale blue, sky blue, and navy. Or fuchsia, pink, and light pink

Activity 6

Colour

You will complete this activity in your workbook.

Please DO NOT write in this book.

Match **Column A** with **Column B**

COLUMN A	COLUMN B	Answer
1. Analogous colours	A. Blue, blue-green, and green	
2. Complementary colours	B. Orange, green and violet.	
3. Colour family	C. Blue, violet, and green	
4. Warm colours	D. Red, Yellow and Blue	
5. Shade	E. Blue-violet	
6. Secondary Colours	F. Next to each other on the colour wheel	
7. Tint	G. Black	
8. Cool colours	H. White	
9. Tertiary Colour	I. Red, yellow, and orange	
10. Primary Colours	J. Opposite each other on the colour wheel	

Design Principles

Recap on Year 1-3 work.

Principles of Design

Balance

Balance is the arrangements of parts so that they have equal weight or force.

Contrast

Contrast is to show great difference between objects through color, texture, value, etc.

Emphasis

Emphasis is when the artist makes one part more important through color, texture, value, etc.

Movement

Movement is how an artist makes our eyes travel around an artworks edges and lines.

Repetition & Rhythm

To repeat (like a pattern) through color, texture, value creating rhythm.

Unity

Unity is the appearance of oneness and similarity in an artwork.

Emphasis

Emphasis is defined as an area or object within the artwork that draws attention and becomes a focal point.

E.g., Yellow fish against a grey scale background, a giant thumb in the middle of a street, a woman that is all isolates (all alone) from everything else in the painting.

<https://hhsartdesignprinciples6.weebly.com/emphasis.html>

Scale or Proportion is the relation between everything in the image with one another. Things in the background will be smaller than things in the foreground.

Callebotte, Piraguas, 1877

The Art Blog of Random Things - Another form of expression

Sequencing

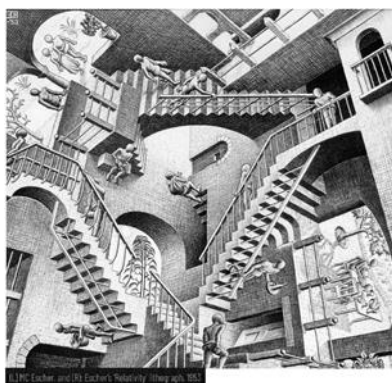

Sequencing is the particular order in which things that have to do with each other, follow each other. E.g., The steps (sequence of events) that take place when a caterpillar breaks free from its chrysalis and flies away as a beautiful butterfly.

Spatial awareness

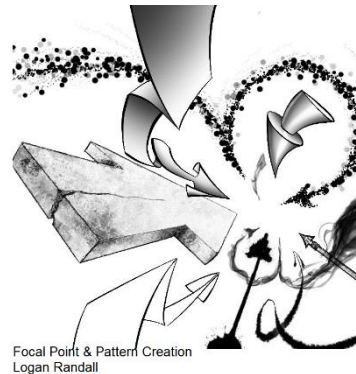

Spatial awareness can be described as being aware of your position in a given space.

E.g., front, side, back, middle.

Focal point

A painting is the area in the composition to which the viewer's eye is naturally drawn to. This can be a point of any size, shape, or colour.

Activity 7

Contrast

You will complete this activity in your visual diary.

Please DO NOT write in this book.

- **Contrast** is when something is strikingly different from something else.
 - Similar but not to be confused with emphasis.
 - Contrast is often created by using complementary colours.
1. Colour the following picture by using only two contrasting colours.

Contrast and Proportion

Proportion and scale are principles of design that describe the size, location, or amount of one element in relation to another.

They have a great deal to do with the overall harmony of an individual piece and our perception of the art.

Examples:

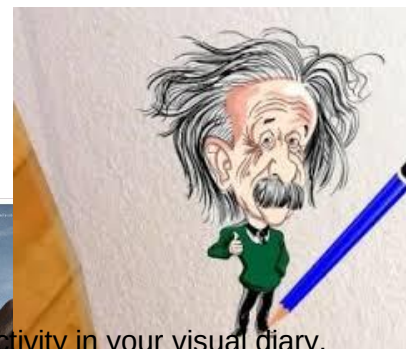

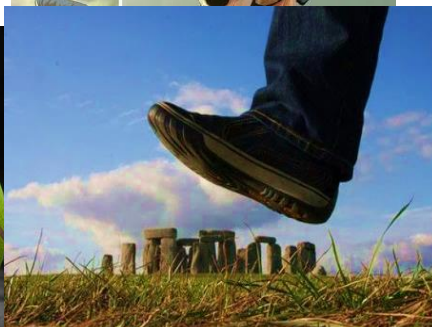

balance by christian schloe

Spoonbridge and Cherry by Claes Oldenburg and Coosje van Bruggen

Cartoon style examples of **exaggerated** Proportion:

activity in your visual diary.
 NOT write in this book.

1. Make a unique drawing to show exaggeration in proportion in a cartoon style.
2. Emphasise a part of the character by enlarging or making smaller, any body part, or facial feature e.g., big eyes, nose, teeth, head, etc.
3. Use your space well.

**Create in 2D**

Pretty Pets

Assessment 1 Formal activity

Start Date: _____**Date:** _____

Dear learner, by the end of this activity you will be able to:

- Identify and use contrasting colours in an artwork.
- You will use contrast, emphasis, and proportion in a drawing of your pet.
- Create focal point in a drawing.

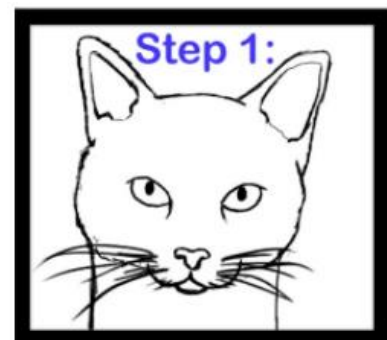

Resources

- Pastels
- Pencil
- White paper / Portfolio
- Pictures of pets
- Coloured pencil
- Black marker

Instructions

Step 1:

- Using a resource image, and make an outline drawing of any animal.
- Use a pencil and do not put any shading or details on the drawing.
- Leave the background bare.

Credit: Sedef Yilmabasar.

Step 2:

- Draw a variety of shapes on the animal's face.
- Do not make the shapes too small.
- In this example, 22 lines were drawn to create $\pm$ 30 shapes.
- You could draw shapes around different shades in your picture.

Credit: Sedef Yilmabasar.

Credit: Sedef Yilmabasar.

Step 3

- With the coloured pencil, draw a swirling line, diagonally across the entire artwork, making sure the loops touch.
- This will create additional shapes.

Step 4:

- Colour each shape, using contrasting colours.
- Some of the shapes must have some patterns in. (look at the example)

Credit: Sedef Yilmabasar.

Credit: Sedef Yilmabasar.

Step 5:

- Using a black marker or sharpie, trace **EVENLY** over all the lines created from steps 1, 2 and 3.
- Lines around the eyes, should be made thicker as this will make them stand out.

Step 6:

- **Use only constating colours to colour your final image.**
- Look at the rubric to see what is being assessed and what is required of you.

You will complete this activity in your visual diary.

Please **DO NOT** write in this book.

✓ **Rubric**

Contrast and Proportion

Criteria	Marks				
Composition is neat and precise	5	4	3	2	1
Effective placement on paper	5	4	3	2	1
Learner understands concept of contrast and proportion	5	4	3	2	1
An excellent focus point is evident	5	4	3	2	1
Use of colour is successful	5	4	3	2	1
Artwork reflects pride and a timeous effort	5	4	3	2	1
Successful artwork is created	5	4	3	2	1

Remarks:

Visual Literacy

Assessment 2 Formal Test

Your teacher will guide you.

TOC (Technical Occupational Curriculum)
Topic 2: Creating in 3-D
1. Identifies and prepares materials, tools, and equipment for craft production.
2. Incorporate basic Design Principles: Balance, Contrast, Emphasis, Proportion, Pattern, Rhythm, Unity, Variety
3. Incorporate basic Art Elements: Line, Tone / Value, Texture, Shape & Form, Colour
4. Makes marketable craft products. (Using Paper-Mache & Clay)
5. Uses tools and materials to produce design/craft products.
6. Produces craft products with specific materials.
7. Produces design/craft products in line with given designs.
8. Produces sequences of the same product design/craft.
9. Selects material, tools, and production process for producing a specified quantity of same product.
10. Identifies and makes use of the same design specifications of the original product.
11. Produces a sequence of the same product.
12. Reviews and finishes craft products for market.
13. Aligns end products with teacher specifications.
14. Grades the quality of finished products.

Chapter 3

Create in 3D

Paper Crafts

We are going to start our 3D journey this year again with Paper crafts and Clay.

When making a 3D model using clay, recyclable products, or paper, we must keep the following in mind:

- Art Elements to be used: colour, line, tone / value, texture, scale / perspective, shapes, and form.
- Design principles to be used: pattern, contrast, rhythm, proportion, emphasis, unity, and variety.
- Types of tools to be used to create the product.
- Your craft product must be something that you will be able to sell in a market, in a shop, school craft market, farm stalls, etc.
- You can start off with one product and if you are fast you may continue to a second product.

Working with paper

Pop-Up Cards

Brief history of pop up's

Pop up cards and books use the element of surprise to delight and amaze audiences at all age levels.

The inventor of Pop-Up's was Ramon Llull (1232-1315) He was a writer, theologian, and mathematician.

He invented a device known as the "Lullian Circle," which was composed of several revolving, affixed circles.

The discs were cut out and attached so that they could rotate upon each other.

Each disc was related to a specific category related to what Llull identified as an essential truth.

Pop-ups become more commonly popular in the fourteenth century as a tool for medical students to learn anatomy. In the 1700's books with moving parts became popular for children.

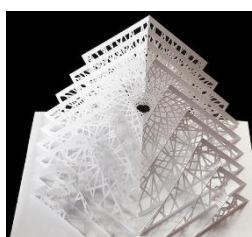

Wonderfully illustrated books with intricate moving parts told stories of adventures and fairy tales.

As well as pop-up books another type of paper art known as 'lift the flap' style was common.

This style of books required children to lift certain flaps on the page to reveal more illustrations or text. It wasn't until the 1900's that the term 'pop-up book' was coined.

Pop-up books and other forms of paper engineering continue to amaze and delight both adults and children.

Here are some examples of Pop-Up Art done by Peter Dahmen:

 Activity 9**Pop up cards**

- You are going to make your own Pop-Up Card, but first you need to practise the basics.
- Who knows, maybe one day you will also be able to create such wonders out of paper.
- Everybody must start somewhere, so let us start with the basics.
- We are going to learn how to make a simple pop-up card.
- As you become more familiar with the technique, you can go full out and create your own amazing cards.
- We are going to take a “2D image” and fold, cut, and turn it into a clever 3D Pop-Up Card.
- Watch these YouTube Videos on how to make Pop-Up’s
- Practise this a few times before you make the one that is going to be assessed.

<https://youtu.be/zFXdAJLbB30> <https://youtu.be/PRyD3VVmp4E> <https://youtu.be/6c4MNvCVotI>

i Here are some examples of Pop-Up Cards:

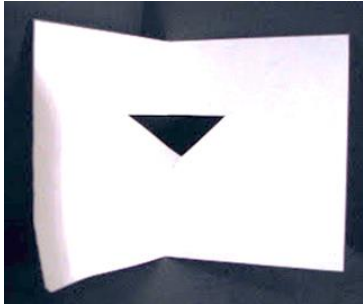

Instructions

There are two basic folding methods that are being used for Pop-ups:

The V-Fold

The most basic V fold pop up is a symmetrical 45 degree angle fold.

The Box-Fold.

You can use this box as a base for infinite creations.

The V-Fold:

Step 1:

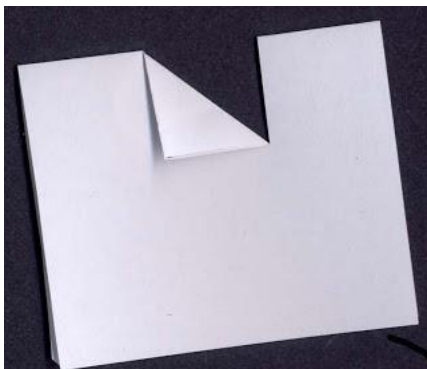

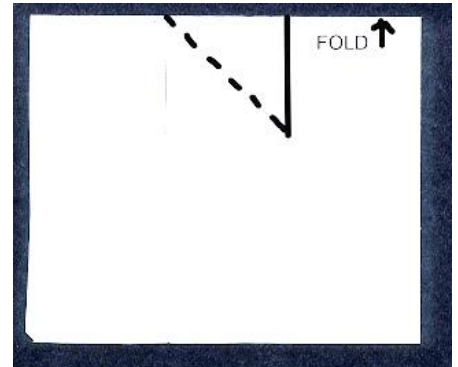

To make this V fold pop up, fold a piece of paper in half.

Draw a square with one side on the fold.

Cut along the solid black line.

Score along the dotted line.

(A pen that has no ink in, works very well when you do some scoring)

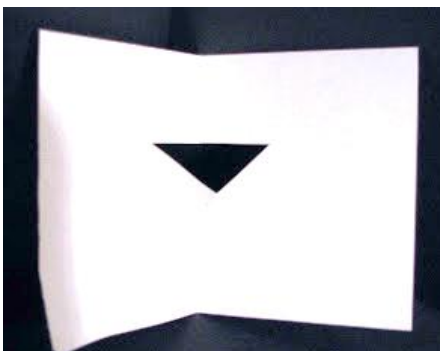

Step 2:

Fold along the dotted line and press it down. Now fold it to the other side. Do that a few times to set the fold.

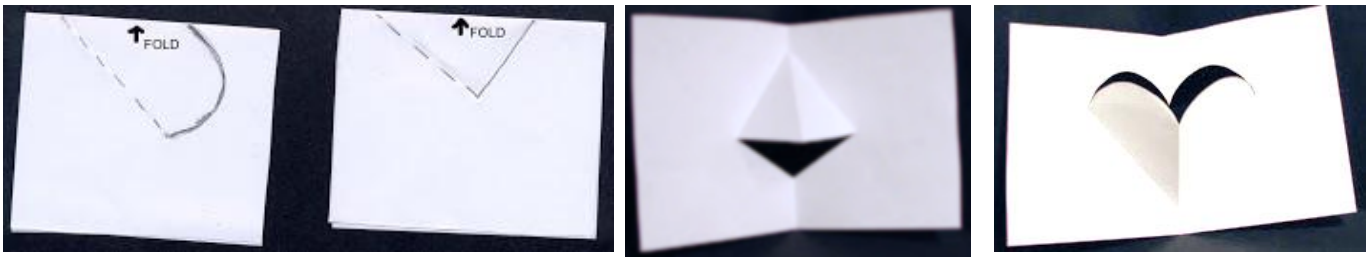

Step 3:

Open it and push from the back to pop the V forward.

Turned this way, it could be a vase or a spout or a bottom lip. Turned upside down it resembles a tree, or a skirt, a hat, or a beak.

Try changing the angle of the fold to make a nose. Change the shape of the cut to make a heart.

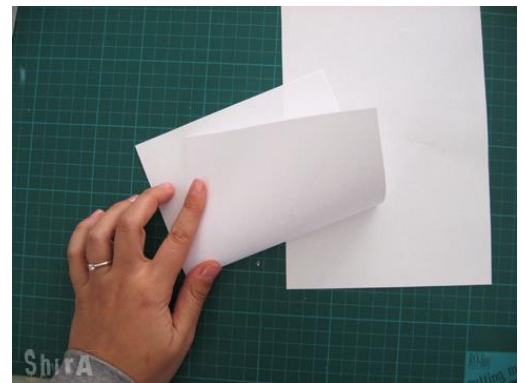

2. The Box-Fold:

Step 1:

Select the paper that you intend to use on the inside of the card and fold it in half.

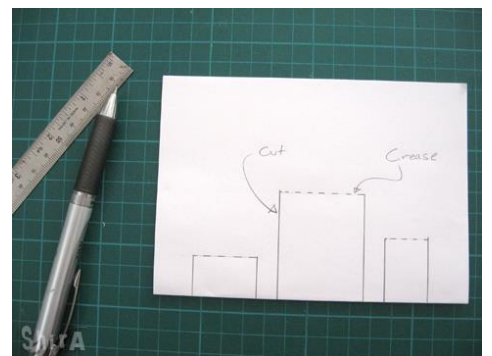

(These examples were made of printer paper for the purpose of demonstration, but a card stock or heavy-weight paper will provide you with a sturdier mechanism.)

Step 2:

On the outside of the folded card, draw one or more rectangles of any size, making sure one side of the rectangle matches the centre fold.

Make sure the length of the cut you are planning (which dictates the length (=depth) of the box) is shorter than half of the card's depth, or else the box might peek out of the card.

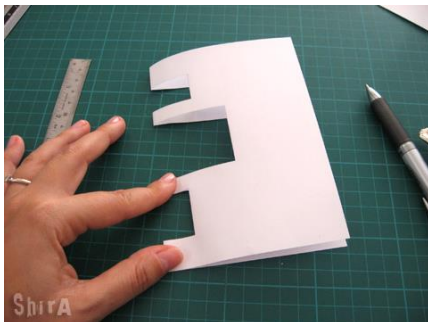

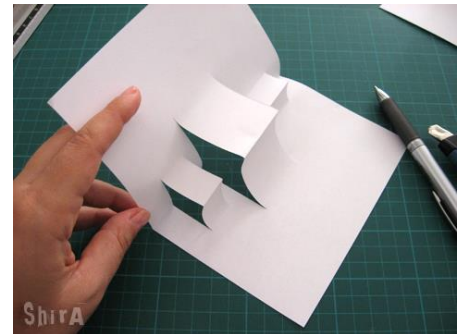

Step 3:

Cut the solid lines.

Use the pen with no ink in and score the dotted (broken) line.

Step 4:

Open the card and push the boxes gently inwards, reversing their “natural” direction. Pinch the popping corner of each box to set the fold into its new direction

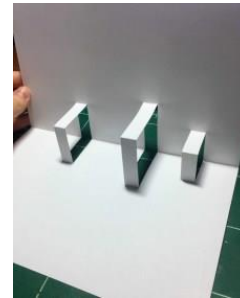

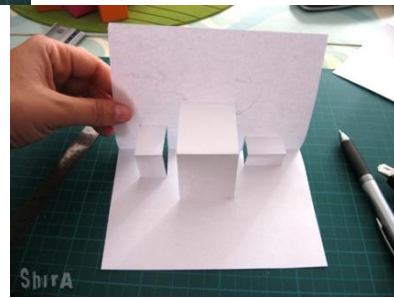

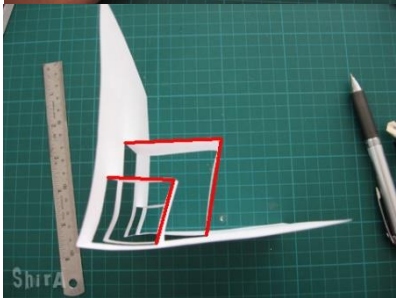

Step 5:

Carefully close the card, making sure to flatten the creases you initially scored.

Step 6:

And there you have it! You can use the boxes as a base for glued-on decorative images, or even use them as the main popping element of the card.

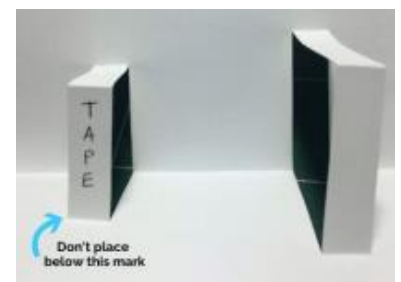

Pop Up Embellishments

The base is complete and now we just need to add embellishments and a cover paper.

Add trees for Christmas. Presents for birthdays. Maybe even a baby and a crib for a Baby Shower.

The key to adding the pop up mechanism is to:

- 1) Make sure it fits in the card. If it's too big, then it will stick outside the card. (It's nice to make it a surprise when you open the card.)
- 2) Line it up with the bottom so it doesn't get ruined on the bottom by folding where it's not supposed to.

- 3) Only put tape on the tab. If you try to guess where to tape or tape the entire embellishment you run into the risk that the pop up will be glued to the base card. You don't want that. Just tape the front of the tab.
- 4) Paste your pictures / letters on the fold-ups.

Final Steps

Don't forget to cover up the popped-in places with a new cover for the base. The cover needs to be white so the inside of the card is uniform. (Unless you want to create a contrast)

Add tape to the outside of the base. Use another piece of cardstock (same size), line up its edges with the base, and stick them together. Then, decorate

the front of the card and sign the inside for a loved one.

Topic 2: Create in 3-D

Pop-Up Cards

Activity 11

Formal Activity

Date: _____

Materials needed:

Card paper (Colour of your choice)

Paper to make your design on

Pencil

Pictures (own choice)

Glue

Ruler

Pen without ink (for scoring)

Glitter (optional)

Own design:

Method:

Design your card on a paper.

Decide what the theme would be. (Birthday, Valentine, Mother, Father, Congratulations, etc.)

Decide what colours you want to use.

Get everything you need together before you start.

Get creative and use the techniques that you have learned to create your own Pop-Up Card.

OR

Cut out flower design:

Materials needed:

Card paper (White and a contrasting colour)

Carpet knife

Pencil

Cutting board

Glue

Ruler

Stencil

Method:Step 1:

Fold the white card paper in half to see where the middle is.

Step 2:

Use the given template, or choose a stencil and trace the lines on the white card paper. If you use your own stencil – make sure you do your scoring lines as the example.

Step 3:

Place your card paper on a cutting mat.

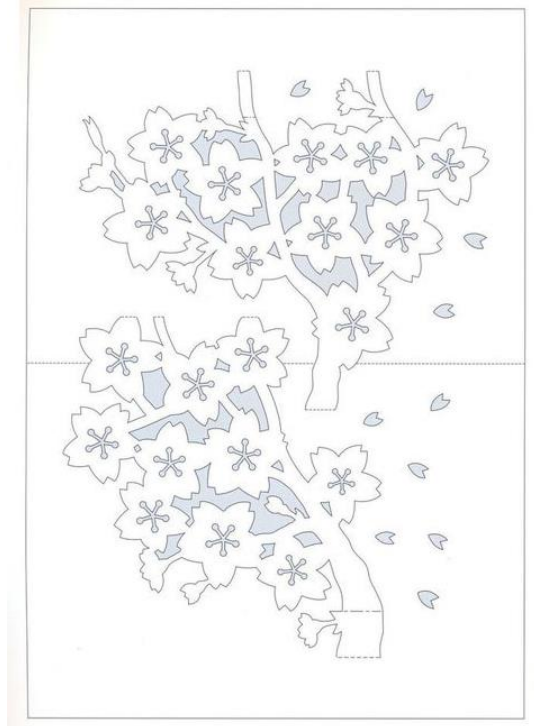

Use a craft / carpet knife and cut on the solid lines.

Cut the darker parts out.

Score your card on the dash lines.

Step 4:

Be careful and lift the pieces up. Fold carefully along the dashed lines.

Step 5:

Use glue and attach your card to the outer card.

Step

Do the finishing touches on the card.

2. Creating in 3-D

Clay work:

Clay: (Reflect on work of the previous years)

Air drying clay:

Air dry clay is a versatile product that can be used in many craft projects. Air dry clay does not need to be heated, unlike traditional clays that need to be fired in a kiln at a high temperature, or polymer clays that need to be heated in an oven to cure.

This kind of clay hardens and cures at normal room temperature and once dry, it can be painted and decorated in a variety of ways.

There are many ways of adding surface decoration to air dry clay. One of the best ways to add texture and design is to use rubber stamps

Rubber stamps are great to use with air dry clay. Deeply etched stamps leave a clear and precise image, while other stamps are good for creating texture and all over designs.

When using rubber stamps to make impressions on air dry clay it is important to remember that the stamped image works in reverse to how the image will look on paper. The raised part of the stamp sinks into the clay. This means that very different looks can be achieved from your favourite stamps. Remember to clean your stamps well after using them to stamp in clay. Scrubbing with an old nail brush should remove any clay left in the stamps.

make your own
STAMPED
CLAY BOWLS

Uses

of air dry clay:

Air dry clay can be used to coil, slab, pinch, and score, and can be used as modelling clay. Air dry clay makes great embellishments for cards and other projects. The finished items need to be allowed to thoroughly dry, however, and it can take up to a week for air dry clay to dry completely. The exact time will depend on the thickness of the item

and room temperature.

Equipment Required:

You won't need any special tools to work with air dry clay. A rolling pin that is dedicated to crafting use, plus a knife, will be all that you'll need for most air dry clay projects. If you are rolling out the clay to work with, then a flat and clean work surface will be useful. A dedicated chopping board may be a useful surface to work on.

Colouring:

In addition to using tempera and acrylic paints, air dry clay can be coloured with marker pens and inks. Other embellishments including glitter glue can be added. Just remember that air dry clay is porous and the finished item should be sealed with a varnish.

Activity 12

Creating jewellery from air

dry

clay Date: _____

Materials needed:

Air Dry Clay – White

Knitting Needle or Skewer

Fine Sandpaper

Cocktail Stick

Watercolour or Acrylic Paint

Varnish

Instructions

1. Take a piece of clay and roll it into a ball. Nice chunky beads is about 2.5cm in diameter.

2. Use a cocktail stick to make a hole. If the hole is off centre, just roll the clay up and have another go!

3. Refine the shape and smooth any marks before sliding off the needle.

4. To create a Bicone shape, (more or less a diamond shape) roll it into a ball and make a hole as you did for the round bead. Once on the knitting needle or skewer, pinch one side of the bead to a point. Repeat on the other side.

5. Smooth out any bumps, before removing from the needle.

6. For the cylinder bead, first roll out a sausage shape

7. Squeeze the ends together to flatten them

8. Gently use the cocktail stick to make the hole, it's really easy to go off centre with this shape! Use the needle or skewer to enlarge the hole before smoothing the surface.

9. Once you have made all your beads, leave them to dry for a few hours.

10. Once they are totally dry, use a very fine grade sandpaper over the surface of the beads.

11. Cover your work surface, it's about to get messy! Mix up your first colour. You can add orange and a bit of pink watercolour to some opaque white acrylic paint and watered it down. Load your brush with the paint and tap the paint off onto the beads! The

beads are quite porous so the paint will dry within a few minutes. Turn the beads around to cover all sides.

Criteria	Mark Allocation	Learner Mark	Comments
1. Process:			
a. Is the paintwork done neatly?	2		
b. Is the end result acceptable?	2		
c. Is this a unique product?	2		
d. Able to make smooth round balls?	2		
e. Are the holes neatly made?	2		
f. Is there variety in the beads?	2		
g. Is the varnish put on smoothly?	2		
h. Was the learner able to interpret and analyse his final product?	2		
2. Elements of art:			
a) Colour: Primary, Secondary and Tertiary colours	6		
b) Line	2		
c) Texture	2		
d) Shape	2		
3. Design Principles:			
a. Pattern	3		
b. Proportion	3		
c. Rhythm	3		
d. Contrast	3		

Total: 40

INSTRUCTIONS:

1. Choose one of the products that you have made this term and make a sequence of it.
2. Follow instructions.
3. Work neatly.
4. Be creative and positive and do your best.
5. Remember that the products will be sold to the public and must be of good quality!
6. Do not quit during the work process.
7. Work at a reasonable speed.
8. Do something extra and special.
9. Tidy up before you leave the work station.

Assessment:

You will be assessed on the following:

Criteria	Possible mark	Real mark	Comment:
1. Personal hygiene	5		
2. Ability to produce a quality product.	5		
3. Ability to follow orders.	5		
4. Ability to carry on and not to quit during the work process.	5		
5. Ability to work at a reasonable speed.	5		
6. Ability to do something extra.	5		
7. Cleaning and tidying.	5		
8. Attitude and helpfulness.	5		
Total	40		
General comments of the assessor:			

Rubric:

Outstanding	5	• Effort far beyond that is required • The “wow” factor is evident
Very good	4	• Good evidence of effort • Technically good
Average	3	• Adequate • Displays understanding, but lacks imagination
Poor	2	• General lack of commitment • No evidence of original thought
Unacceptable	1	• Very little or no work – work incomplete • No effort
