

## Chapter 1

### Visual Literacy

**At the end of this lesson you will be able to:**

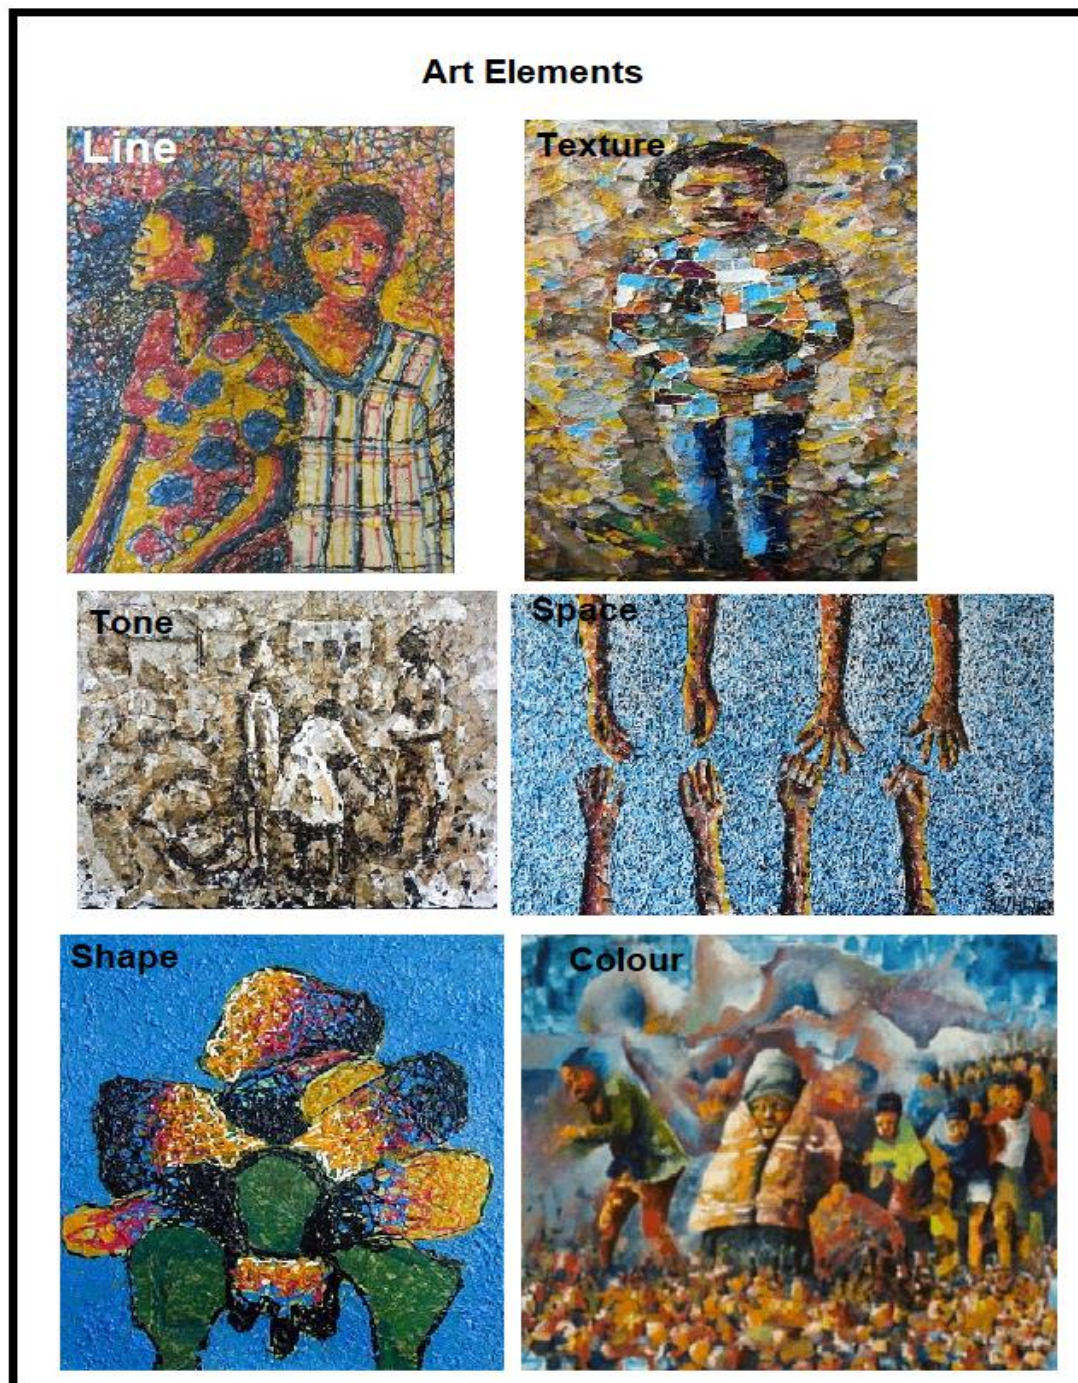

- Apply the art elements and design principles in all work of arts and crafts.
- Understand that the elements and principles are all around us in everything we do.
- Criticise art products critically
- Complete the Activity sheet in their learner books

### Art Elements

**Listen and discuss the art of Mbongeni Buthelezi**

## Visual Literacy

### Activity 1

### Art Elements and Design principals

**At the end of this activity you have to:**

- Complete the worksheet handed out to you by your educator.
- Write in the date applicable
- Do not write in this copy of your textbook because others also need to use it in the following years.
- Cut out the worksheet so that it will fit into your class work books.
- Paste the worksheet in the classwork books.

**1. Study the pictures above and under each section, discuss 3 facts e.g. picture on colour what type of colours do you see or name the colours etc.**

Activity 1                      Art Elements & Design Principals

Date: \_\_\_\_\_

1. Name three types of lines used in this artwork.

\_\_\_\_\_

2. After you have watched the video, how do you think he created texture on the painting?

\_\_\_\_\_

3. What type of colour scheme were used in the picture indicating value? \_\_\_\_\_

4. Do you think that in the artist work on space and form it was utilized correctly and give an answer for your decision.

\_\_\_\_\_

5. What colours can you see in the colour painting and identify the types of colour.

\_\_\_\_\_

\_\_\_\_\_

6. What is the real emphasis in the painting on empahsis and explain why you gave this meaning.

\_\_\_\_\_

7. Name the design principal you liked the most.

\_\_\_\_\_

## Visual Literacy

**Mobongeni Buthelezi**

**At the end of this lesson you will be able to:**

- Apply the art elements and design principles in all work of arts and crafts.
- Understand that the elements and principles are all around us in everything we do.
- Criticise art products critically
- Complete the Activity sheet in their leaner books

## **Mobongeni Buthelezi**

**Born:** 1966, Johannesburg, South Africa

The journey to becoming a recognized 'recycled plastic' artist was not easy for Buthelezi, and he started his craft by studying from a local artist called Lucky Moema, in exchange for bread and tea.

He moved on to Johannesburg, where he studied part-time with very little money and materials he had.

He wanted to become a sculptor.

Buthelezi was encouraged to try drawing and painting, but eventually, it was not paint that he found himself applying to the canvas.

Buthelezi had to look for alternative materials, because he couldn't afford to buy expensive paints and canvases.

In a workshop with a Swiss artist who used plastic as canvas for his artworks, Buthelezi got his initial inspiration.

His idea was to use plastic not only as a canvas but also to paint with this cheap material one can find everywhere.

Soon he found himself experimenting with a heat gun, applying the melted material onto a black plastic background.

In that year he received best marks for his plastic works and from then on he continuously improved his technique- making a virtue out of necessity."

After being recognized for his work and winning awards, he moved into full time study, and began making recycled plastic art as his primary style.

Using discarded plastics of a certain quality in melting process, he paints impastos solid forms burnt with a heat gun onto a thick, roofing plastic surface.

He has created a new form of paint, a so called plastic painting.

His unique paintings are often larger than life.

He is able to work realistically and abstractly, with the technique being extremely detailed.

He is widely recognized as one of South Africa's most exceptional artists, having been awarded numerous awards and commissions over that time.

Knowing how hard it was to receive an art education, Buthelezi even spent time as a part-time art teacher, sharing his love and creativity.

## Visual Literacy

### Activity 3

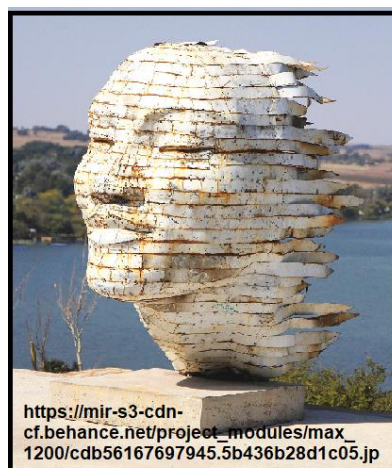

### Anton Smit

#### The following needs to be done by you:

- Read the biography of Anton Smit.
- Answer the questions on his personal life.
- Analyse Anton Smit's artwork.
- Read the questions and answer accordingly.
- Cut out the worksheet and paste them into your workbook.
- Do not write in the learner books.

#### Anton Smit

- Born in Boksburg, August 2, 1954.
- Best known for his monumental sculptures representing emotionally compelling human figures, heads, masks, and abstract works which are said to evoke "themes of suffering, reconciliation, glory and sublimation."
- Smith is the son of a police officer and a school teacher. At the age of 17 he began to take an interest in sculpture while finishing high school in Pretoria.
- A decade at various security occupations elapsed before Smit could assume art as a main endeavor.
- Anton Smit is the father of Lionel Smit, also a noted South African sculptor and canvas artist with whom he often shares art initiatives.
- His artwork is part of an open-air sculpture collection at the University of Pretoria's (main) Hatfield Campus.
- Further sculptural work by the artist can now be found on permanent public display at several locations in South Africa where they have become tourist attractions.
- These include the wine estate grounds of Grande Provence, Avondale Paarl, Idiom Wine, and Delaire Graff.
- Beyond borders, Smit's monumental (7 m high) statue "Faith" was inaugurated at

## Background

1. Where was she born?
2. What work did his mother and father do?
3. Name some of the artworks he has made?
4. Name two public spaces where his work is a permanent feature.

## Description

**Describe what you see in full detail as if explaining this painting to a blind person.**

1. What medium did the artist use?
2. What subject matter did the artist use?
3. Is the subject matter historical. Cultural, a landscape, portrait etc? Explain
4. What is the possible meaning of the artwork?

## Analysing

**Describe the elements and principles in the artwork and how they work together to compose the image.**

- 2.1 How did the artist use space?
- 2.2 How did the artist use colour?
- 2.3 Did the artist use form?
- 2.4 Is there tint's and shades in the art and explain the answer?
- 2.5 Are there shapes and what do they look like?
- 2.6 Is this painting realistic or cubistic or contemporary? Explain your answer.
- 2.7 What type of texture were used?
- 2.8 Name a few types of lines the artist used in this artwork.
- 2.9 Name the type of balance the artist created.
- 2.10 Is there any contrast in the artwork? Explain.

2.10 Did the artist use unity, repetition and rhythm? Explain.

2.11 What is the focal point in the painting?

### **Interpretation**

3.1 How does the image make you feel?

3.2 What mood does it have?

3.3 What does the picture remind you of?

3.4 What did you like the most in the picture? Describe why?

### **Judgment**

Do you like the painting or not? Give your own opinion.

## Chapter 2

Create in 2 D

### Printing

#### At the end of this lesson you need to:

- Understand that printing can be done in many ways
- Printing techniques and how you will be doing it.
- Surface printing ideas.
- Creating creative thinking on your own design.

### What is printing?

- Printmaking is the process of printing motifs or patterns onto a surface, with the help of ink and pressure.
- This method is very old, and was first discovered in China around 255 B.C.
- Since then, printmaking has been around in different forms all over the world. Think of the way the first books were printed.
- The same invention that revolutionized the world of knowledge also made a huge impact on the visual arts.

### Four main types of printmaking

#### Relief printing

- This is printing from a raised surface.
- A simple example of relief printing is a rubber stamp pressed into a stamp pad and pressed onto a piece of paper.
- Relief printing plates are made from flat sheets of material such as wood, linoleum, metal, Styrofoam etc.
- After drawing a picture on the surface, the artist uses tools to cut away the areas that will not print.
- A roller – called a brayer – is used to spread ink on the plate.
- A sheet of paper is placed on top of the plate and the image is transferred by rubbing with the hand or a block of wood, or by being run through a printing press.

#### Woodcut

- Historical uses: Textiles and other decorative purposes, playing cards, calendars and book illustrations.
- Artists worth studying: Holbein the Younger, Fred Hagen, Vincent Van Gogh, James Whistler, any Japanese printmaker.

- This describes prints that are made by cutting the picture into the surface of the printing plate.
- Using a sharp V-shaped tool – called a burin – the printmaker gouges the lines of an image into the surface of a smooth polished sheet of metal or in some cases a piece of plexiglass.

- To make a print, ink is pushed into the lines of the design.
- The surface is then wiped clean so that the only areas with ink are the lines. A sheet of paper which has been soaked in water is then placed on the plate which is run through a printing press.
- The paper is literally forced into the small lines that have been cut into the plate. A variation of this technique is known as etching.

## Lithography

- Lithography is the art of printing from a flat stone (limestone) or metal plate by a method based on the simple fact that grease attracts grease as it repels water.
- A design or image is drawn on the surface with a greasy material – grease crayon, pencil or ink – and then water and printing ink are applied.
- The greasy parts absorb the ink and the wet parts do not. Acids are often used with this type of printmaking to etch the stone and prevent grease from traveling where it should not.
- Lithography was invented in 1798.

## Stenciling

- A stencil is a sheet of paper, fabric, plastic, metal or other material with designs cut, perforated or punched from it.
- Ink is forced through the openings onto the surface (paper, fabric etc.) to be printed.
- Sometimes called silk screening, serigraphy (seri means silk) is a type of stencil printing.

Create in 2 D

## Activity 4

### Formal Activity

At the end of the activity you need to be able to:

- Create table mats with printing techniques
- Create marketable products to sell at a craft market
- Understand processes of printing.
- Set up a budget and do costing and selling document.

#### Brief

Accumulate different ideas of craft product you like and collect pictures and ideas from magazines, pamphlets, newspapers, prints, the internet, prints etc.

Creating printed table placement mats.

Learners to use different kinds of recycled printing props to create the placement mats.

After completing these table placement mats they have to laminate them and repackage them for markets.

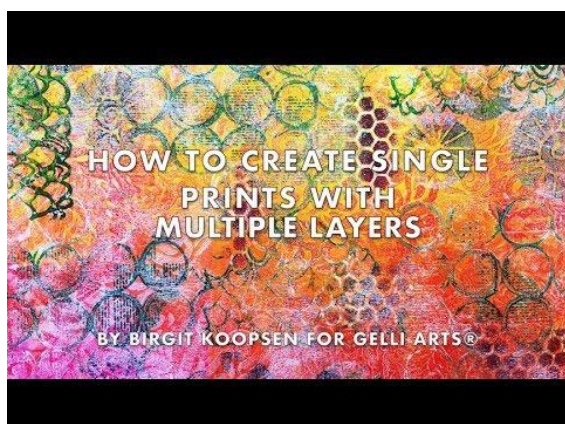

Before you start the project look at some of the video's here to support you in ideas

### Materials

|                                                                                                                                                                       |                                                   |                 |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------|-----------------|
| Bottle caps                                                                                                                                                           | Toilet rolls                                      | Buttons         |
| Bubble rap                                                                                                                                                            | Ear Buds                                          | Paper/Cardboard |
| Paints                                                                                                                                                                | Paintbrush                                        | Water           |
| Water containers                                                                                                                                                      | Rubber Roller                                     |                 |
| A4 page                                                                                                                                                               | 6 x A3 board or soft card board for final product |                 |
| Colouring pencils                                                                                                                                                     | Hard piece of plastic and or xray plate           |                 |
| Carpet knife or craft knife                                                                                                                                           | Sponge                                            | Apron           |
| Polystyrene – some pizza bases, plates or containers made of polystyrene. You can also buy polystyrene blocks or rolls.                                               |                                                   |                 |
| Something to roll the paint or ink onto – a paint tray, a flat, plastic board, a piece of cardboard or a glass tile.                                                  |                                                   |                 |
| Something pointy (but not too sharp) to carve into the polystyrene – a blunt pencil, a knitting needle, a ballpoint pen with a lid on it, or the end of a paintbrush. |                                                   |                 |

### Instructions

### **Step 1**

#### **Sketch your design on a A4 page**

- Make some sketches of the print you'd like to make on paper.
- Lines will work well carved into the polystyrene. As you sketch your design, think about how you could incorporate a mix of lines and patterns, using different tools.
- Two things to remember: 1. Your print will be a mirror image of what you see on the printing block 2. The parts you press down will not be inked, so will be the colour of the paper on your final print.

### **Step 2**

#### **Prep your polystyrene**

- Give your polystyrene a good wash if it's recycled.
- Next, if you are using a tray or takeaway tray, make your polystyrene flat by cutting off any edges that are sticking out.
- Cut your polystyrene, the printing "block", to the shape you want to have for your print.
- Think about your edges – make them smooth, or just be aware of how they will print.

### **Step 3**

#### **Press into your block using your tools**

- Different tools will make different marks.
- Before you start, you might want to practise on some spare polystyrene and look at how the different tools work.
- If you make some lines deeper and some slightly shallower, your print will show the variation. Test the resistance of the block. Keep stepping back and looking at the overall design.

### **Step 4**

#### **Get your ink ready**

- Once you are happy with your design, prep your work area, covering it in newspaper.
- Squeeze a thin line of ink into the tray.
- Make sure there's not too much: you only need enough to cover the roller in a thin, even way.
- Roll the ink out, using your roller. Keep rolling until the ink is evenly and thinly spread all over your roller.

### **Step 5**

#### **Apply ink to the block**

- Then, gently roll the ink onto the block using the ink-covered roller.
- Cover the block all the way to the edges, rolling the ink back and forth gently over the block.
- Add more ink if needed to get an even coat of ink. You'll start to see where the ink is going to go once it's printed.

| e) Made at least 4 place mats                                         | 1               |               |
| f) Professional – Made it marketable                                  | 1               |               |
| <b>TOTAL</b>                                                          | <b>25</b>       |               |

## Chapter 3

### Visual Literacy

**At the end of this lesson you will be able to:**

- Understand the types of air dry clay
- How to use air dry clay to create products
- Understand how to use different techniques

<https://www.youtube.com/watch?v=lq6wMzSU1NI>

<https://www.youtube.com/watch?v=PCG1mwnUtug>

- Clay is a crafting medium with a few different subtypes, including paper-based, earthen, and epoxy two-part mixed-base.
- Choosing the right clay type depends on the user's material preference and the particulars of the project.
- Each variety of air-dry clay has different ingredients, textures, dry time, and strength once hardened.

### Paper-Based

- Paper-based clay starts with a clay body, such as terra cotta or earthenware, then adds processed paper (or other cellulose fiber).
- Paper clay improves joining capabilities.
- Benefit of paper based clay : To make alterations to a project, paper-based clay can undergo dry-to-dry and wet-to-dry joins. The paper fibers increase the firmness of the sculpture while minimizing shrinkage during the drying process.

### Earthen clay

- Earthen clay is the most common type of clay.
- It's made of natural clay containing iron and other minerals from ground soil and the plant and animal life within it.
- These finely grained earth materials become pliable when wet, forming a nontoxic clay.
- It's a good fit for sculpture and other "look but don't touch" projects.

### Epoxy Two-Part Mixed-Base

- Epoxy clay comes as (1) a resin and (2) a hardener that must be mixed thoroughly to set and dry properly.
- Once mixed, epoxy clay dries quickly; it takes up to two hours for the clay to harden.
- Once the two-part compound dries, the user cannot make alterations to the structure of the work.
- The good news is that epoxy clay is quite solid when it dries, so it's a good choice for jewelry, ornaments, and other objects that people handle.
- Depending on the brand, epoxy air-dry clay may be called waterproof because of the strength of the chemical bond, but it's best to err on the side of caution and put plastic liners inside pottery used as a vase.

## Chapter 4

Create in 3 D

### Activity 5

#### Formal Activity

**At the end of this lesson you need to:**

Create your own pinch pot / pot's.

Know what product you want to make and if you will be able to create more than one marketable product.

Do costing on sequence of products.

### Brief

Creating a pinch pot out of any type of clay that will be used as a commercial product for art markets or curio shops.

#### Materials to be used:

Clay

Clay tools

Water

Paints

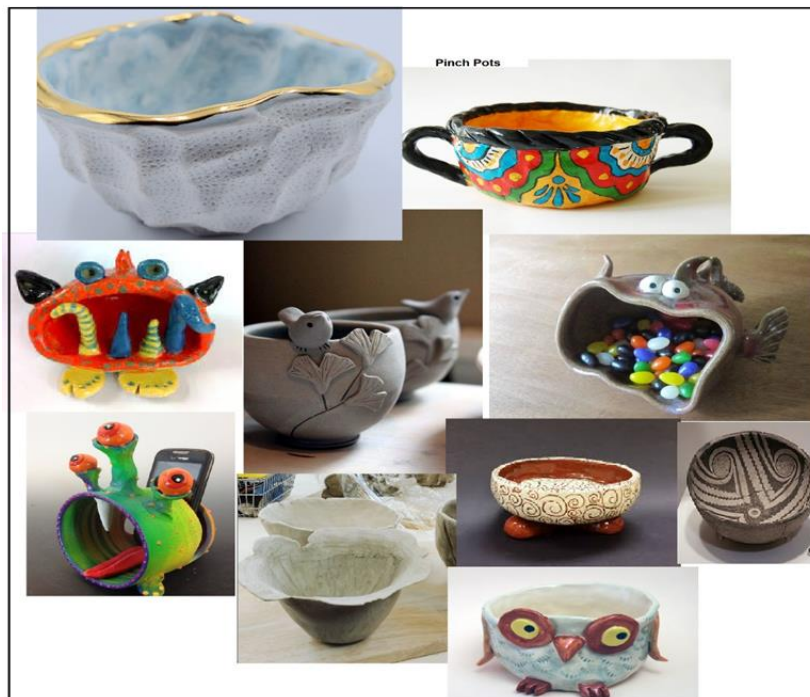

### Instructions

1. Draw three to four designs in your art dairy.
2. Place in the surface designs you want to place on the pots e.g. patterns, colours etc.
3. Read the rubric before you begin.
4. Watch the videos to guide you in the making of the clay objects and observe ideas from the pictures below.

|                    | <b>Exceeding Standards<br/>4</b>                                                                                                                              | <b>Meeting standards<br/>3</b>                                                                                                                                    | <b>Approaching standards<br/>2</b>                                                                           | <b>Not meeting standards<br/>1</b>                                                                                                               |
|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Shape</b>       | The shape of the bowl is similar to that of half a ball. The bottom is rounded and the walls are vertical. The bowl is taller than it is wide.                | The shape of the bowl is fluted out or curved in too much. The bottom is more flat than round. The bowl is still taller than it is wide.                          | The bowl is wider then it is tall (ashtray appearance). The walls are vertical but very short.               | There is no bowl shape at all in the project piece turned in. No project was turned in.                                                          |
| <b>Appearance</b>  | The bowl is devoid of unwanted tool marks, dimples or bulges. There are no cracks in the surface and the lip is smooth and even.                              | There are a few marks or cracks. The lip is still fairly smooth. There are minimal dimples and bulges.                                                            | The bowl has several flaws including cracks, wrinkles, dimples or bulges.                                    | The bowl could not be used as a functional object. The walls are cracked and wrinkled dramatically.                                              |
| <b>Consistency</b> | The thickness of the walls and base are even. The walls should be about ¼" in thickness                                                                       | The wall thickness is more than ¼". There is a slight variation in the wall and base thickness.                                                                   | The difference between the wall and base thickness is very apparent.                                         | The walls or base are paper thin in comparison to one another. One area is thicker than the other.                                               |
| <b>Effort</b>      | Student took time and listened to teacher's advice and mentoring. They stayed focused throughout class and took care of their project. Helped other students. | Student worked well and took most of the teacher's advice. The project was taken care of fairly well. Teacher rarely had to refocus. Able to help other students. | Student ignored teacher's advice. They frequently needed to be refocused. Student was distracting to others. | Student was preoccupied by conversations or homework from other classes. Student was distracting to others. Teacher consistently had to refocus. |
| <b>Drawings</b>    | Learner drew pots in perspective and applied detail on what was going to be on the end product.                                                               | Learner drew pots but did not explain what he / she were going to use to create estetic unity                                                                     | Learner drew bowls and used very little detail on the drawings                                               | Only some drawings were done but no detail was produced                                                                                          |

## Chapter 5

### Budgeting

At the end of this section you need to be able to:

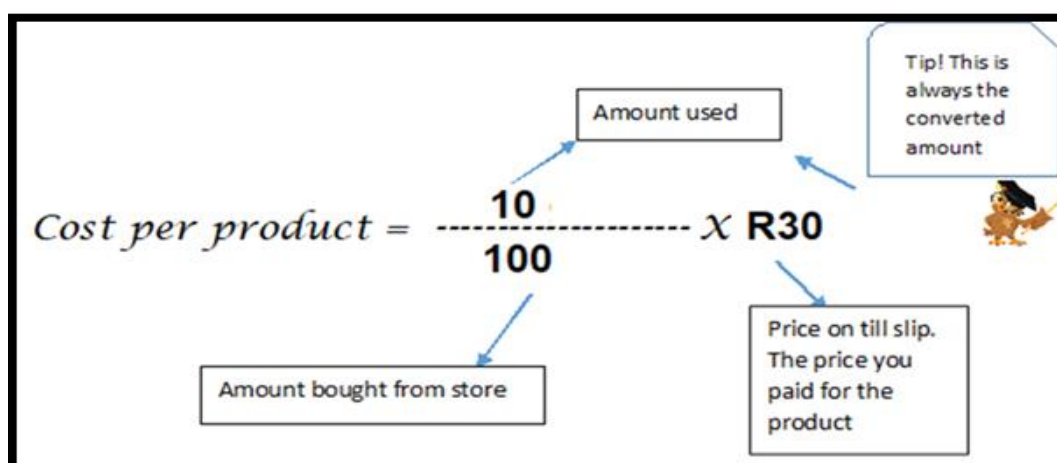

Do costing on products and how to set up the budget

Work out profit margin on product you created

### Instructions

Work out budget on the 2 D and 3 D product.

Remember: You have to do this step with ALL the items that you use in the product.

### Step 1

To get the total cost per product, you have to add all of the **costs** per items used to create the one product. [16]

| Material                           | Base Cost | Total Used | Total Cost |
|------------------------------------|-----------|------------|------------|
|                                    |           |            |            |
|                                    |           |            |            |
|                                    |           |            |            |
|                                    |           |            |            |
| Cost per 2D table placement mats = |           |            |            |

| Material                    | Base Cost | Total Used | Total Cost |
|-----------------------------|-----------|------------|------------|
|                             |           |            |            |
|                             |           |            |            |
|                             |           |            |            |
|                             |           |            |            |
| <b>Cost per Pinch pot =</b> |           |            |            |

## Step 2

**You have to add labour costs.**

**[6]**

Example: You are making 4 placemats

One takes about 30 minutes to make.

One placemat cost R4.40 and you work for R5 an hour.

How much will it cost to make 4 or 6 placemats?

**Cost = Time + Material**

### Placemats

| Material/Time                         | Amount of Products | Cost for one | Total Cost |
|---------------------------------------|--------------------|--------------|------------|
|                                       |                    |              |            |
|                                       |                    |              |            |
| <b>Total cost to make 4 placemats</b> |                    |              |            |

### Pinch pots

| Material/Time                          | Amount of Products | Cost for one | Total Cost |
|----------------------------------------|--------------------|--------------|------------|
|                                        |                    |              |            |
|                                        |                    |              |            |
| <b>Total cost to make 4 pinch pots</b> |                    |              |            |

### Step 3

#### How much can one charge for a product?

[3]

- To know exactly how much you can get for your creations is going to take some serious trial and error.
- The general rule with retail sales is to triple your expenses to find your selling price.
- This means that, if you've made that if a placemat cost with a total cost of R4,50, and your labour is R5 the total is R9.5 and you should sell it for R22.50 (or round it off to R30.00) in a retail situation.
- However, you'll need to think about how and where you're going to sell before you put a price tag on your work.
- The best advice would be to try a couple of pieces at different prices and see what happens. If they sell like hot cakes, you may have priced them too low. If you're not selling anything at all, your prices are likely too high.
- Also take into consideration that you may have hit on a trend, and are making and selling things that people really want.
- Taste is probably one of the biggest factors when a buyer makes a purchase.
- With a little luck and a lot of style, you should at least be able to get started in the handmade craft business.

Examinations: External Examinations set by Nasional Team

| Web Address                                                                                                                                                                                                                                                                                                                                                                                                                         |
