Chapter 1

Visual Literacy

At the end of this activity, you will be able to do the following:

- Using the art elements and design principles creatively.
- Know about some careers for artists.
- Using the basics of Optical illusions to create “Op Art Creations”.

Elements of Art:

Design Principles:

Balance

Contrast

Emphasis

Movement

Pattern

Rhythm

Unity

http://nwsa-2dart.blogspot.com/2013_08_01_archive.html

Activity 1.1

Resources

- A4 drawing paper, for each learner.
- Template of the T-shirt as well as the instruction T-shirt that shows the block allocation.
- Drawing medium that the learner is comfortable with.
- Any appropriate colouring medium of the learners choosing.

Instructions

- Use the template and decorate the T-Shirt to tell us something about yourself.
- Use art elements and design principles to create your T-Shirt.
- Make sure you also use appropriate colours.
- Work neatly and be creative.
- Look at the rubric to see what you will be assessed on.

Look at the example:

Favourite Movie	If I were an animal	My favourite sport	Favourite place
Favourite song	Name	Self Portrait	
	Age	Grade	Favourite drink
Favourite subject	Favourite fruit	Favourite colour	
	Favourite vegetable	Favourite book	

Activity 1.2

Resources

- White T-shirt in the learner's size.
- Black clothing marker to draw blocks on the T-shirt.
- Pencil to draw on shirt before painting.
- Fabrik paint in various colours. (Food colouring may also be used as experimental techniques and colours.)
- Paint brushes. (Fabrik pens may also be used if available.)

Instructions

- Give each learner a T-shirt. (If possible, they may also bring a white T-shirt from home, make sure that parent gave consent and is aware that learner will be painting on the T-shirt.)
- Help learners, if needed, to mark the shirt with the different blocks.
- Copy your ideas, drawing from planning phase, onto your T-shirt. Use a pencil.
- Each learner will paint their own shirt in whatever design they drew in the planning phase.
- When you are done, leave your T-shirt to dry in a clean dry place.

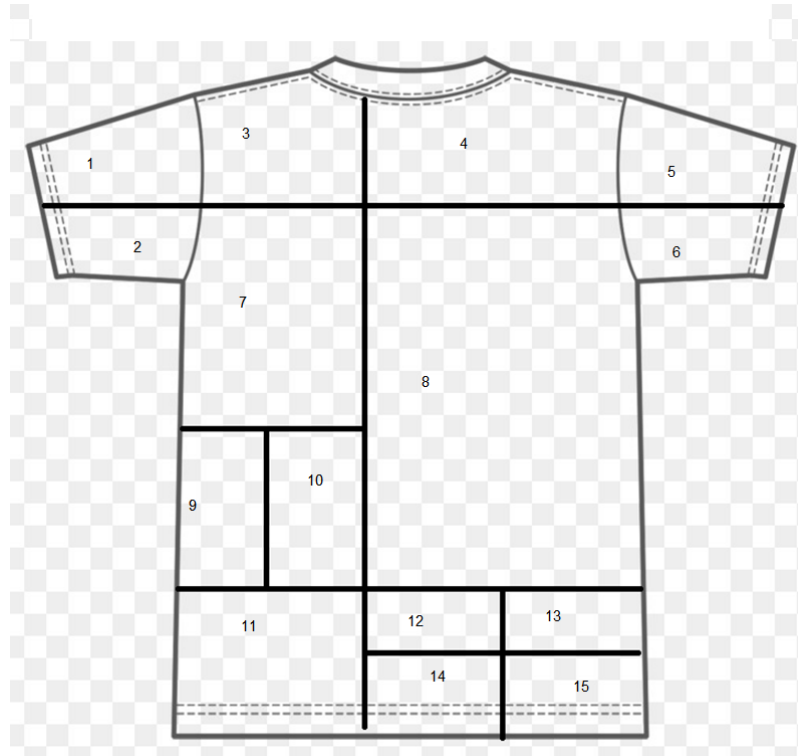

Clean up your workstation and brushes.

Reflection

Answer the following question:

1. Which Elements of Art and Design Principles did you use for your creation?
2. Write it next to the corresponding number.

Please DO NO write on this page

- 1 _____
- 2 _____
- 3 _____
- 4 _____
- 5 _____
- 6 _____
- 7 _____
- 8 _____

- 14 _____
- 15 _____

Assessment

Your artwork will be assessed on the following:

Criteria	Possible mark	Real mark	Comment:
1. Did you use art elements creatively?	5		
2. Did you use design principles creatively?	5		
3. Could you name them all correctly?	15		
4. Is this artwork true to who you are?	5		
5. Did you use monochromatic colours?	5		
Total	35		
General comments of the assessor:			

✓ Rubric

Outstanding	5	• Effort far beyond that is required • The “wow” factor is evident
Very good	4	• Good evidence of effort • Technically good
Average	3	• Adequate • Displays understanding, but lacks imagination
Poor	2	• General lack of commitment • No evidence of original thought
Unacceptable	1	• Very little or no work – work incomplete • No effort

Hopes and Dreams

There are jobs to do with art and design in many industries, whether you want a career as an artist or designer yourself or would prefer to look after artwork by important artists or help others appreciate art.

Art careers come in all shapes and sizes. There are art industry jobs creating original works, selling, and promoting them, and displaying them to the public in museums and galleries. There are jobs teaching others about art and jobs helping people to express themselves through art.

There are also lots of art related jobs outside the world of art. Artistic vision and design skills are needed in areas such as architecture, fashion, media, film, and theatre.

Fine artist

Fine artists create original works of art. This can be in any medium, such as paint, wood, metal, or textiles. What distinguishes the work of fine artists from most other careers on this list is that its purpose is purely to be a work of art, rather than to add visual

Source: Ahran Gate.

appeal to something with a functional purpose (such as making a building, clothing item or webpage look good). Fine artists make money by selling their work, and many have another job too to give them a regular, reliable income. You do not have to have qualifications in art to be an artist.

Illustrator

Illustrators use their painting or drawing skills to create images for products such as books, greetings cards, clothing, posters, and animations. They can work with traditional materials to create physical images or use relevant software packages. Specialist areas include scientific and medical illustration, for example for use in textbooks. Most illustrators are self-employed but there are some permanent jobs available. Your skill as an illustrator is more important than your qualifications.

Art and design jobs in fashion

Fashion designers can design clothes or work in specialisms such as jewellery, shoe design, bags, or accessories. Textile designers design fabrics, while fashion stylists use their knowledge of emerging trends to dress models for fashion shoots or help individuals to update their wardrobes.

Jobs to do with art in media, film, and theatre

There are lots of jobs in the media, film and theatre that will put your design skills or eye for beauty to good use. You could work in publishing or advertising as a web designer, graphic designer, or photographer. Art-related jobs in TV, film or theatre include set designer, costume designer, make-up artist, lighting technician and lighting designer/director. In TV and film there are also roles such as camera operator, cinematographer, and film/video editor.

Makeup artist

Drama is a complex art form. Theatre is a mixed art because it needs help from many artists and experts to create the correct atmosphere.

Stage and screen make-up is a challenging career. People use make-up in theatre, movies, ballet, and dance presentation. Some musicians use make-up to create effects for their shows. Musicians use make-up to create effects for their shows.

Makeup artists learn how to make people look older or younger. They apply hair where there is none. They also create characters, and special effects, such as cuts and burns. When movies are filmed, the make-up artist needs to create the same look every day. In the theatre, the make-up artist shows performers how to put on their make-up.

Face painting

Whether you are looking for a rainy-day activity, something to make a party memorable, or some ideas for your next school fundraising event, face painting is the answer. You cannot quite beat the silent, anticipatory face paint queue of excited little people waiting to be transformed into a character from their imagination, or that moment when you turn the mirror to them and there is a little rainbow face of awe looking back at themselves.

And do not panic that face painting is only for fine artists. With good-quality face paints, a few brushes, and sponges, you too can create face paints to wow, inspire, and amuse.

Our top tip for amateur face-painters: remember you are going for overall effect, not detail. No one is looking closely, and the harshest critic is yourself. Children are far more prepared to look beyond any wobbly lines and get lost in their transformation. So be confident, have fun.

Hopes and Dreams

There are jobs to do with art and design in many industries, whether you want a career as an artist or designer yourself or would prefer to look after artwork by important artists or help others appreciate art.

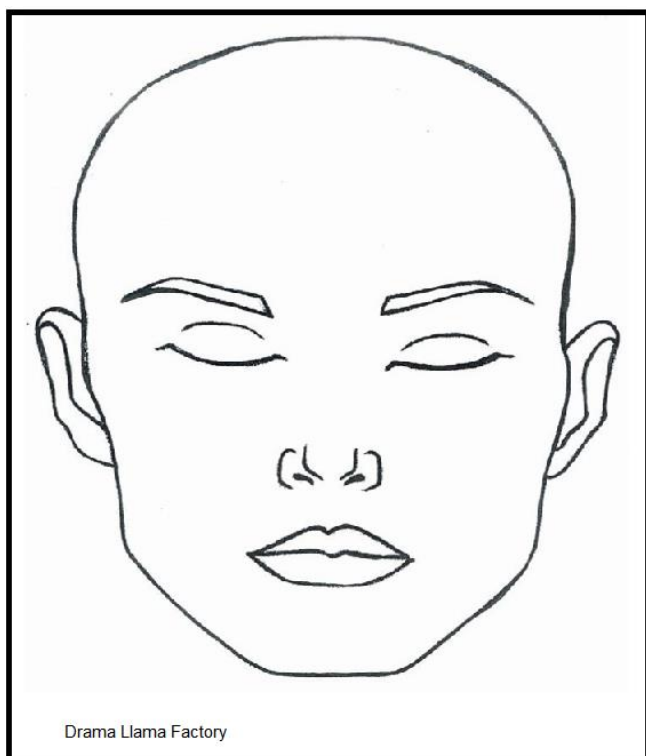

Art careers come in all shapes and sizes. There are art industry jobs creating original works, selling, and promoting them, and displaying them to the public in museums and galleries. There are jobs teaching others about art and jobs helping people to express themselves through art.

There are also lots of art related jobs outside the world of art. Artistic vision and design skills are needed in areas such as architecture, fashion, media, film, and theatre.

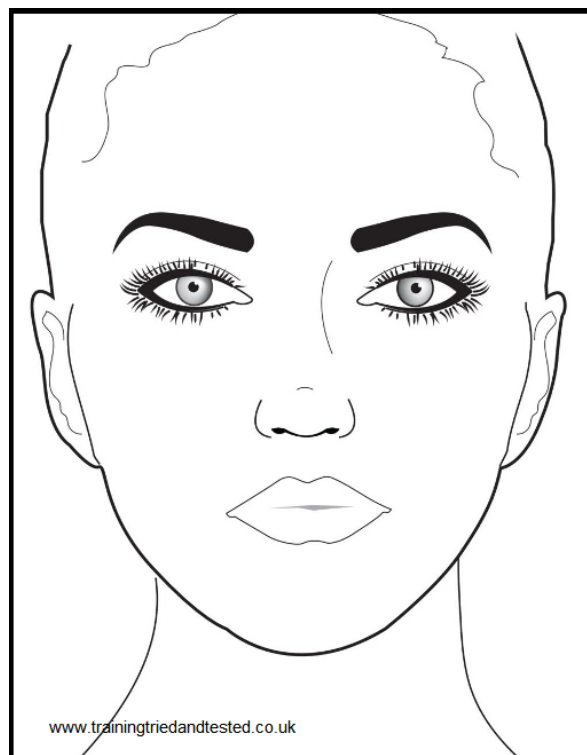

Activity 2

- Look at the templates below.
- Your teacher will give you one to work on, please do not draw in the book.
- Draw and colour these faces as if you were face painting on 1) a child (boy or girl) and 2) a lady.
- You can be as creative as you want.

Child

Lady

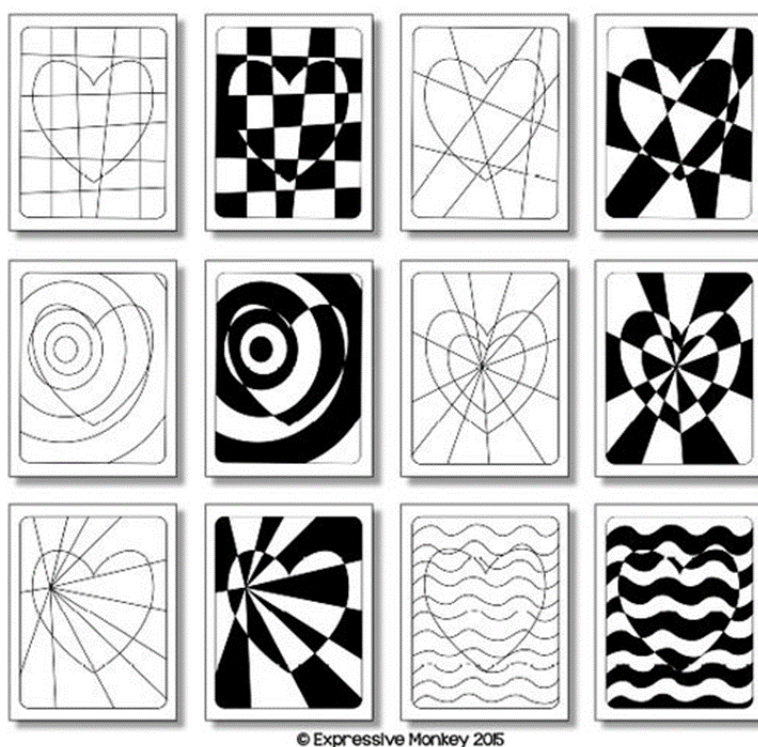

Activity 3

Optical illusions

Activity 3.1

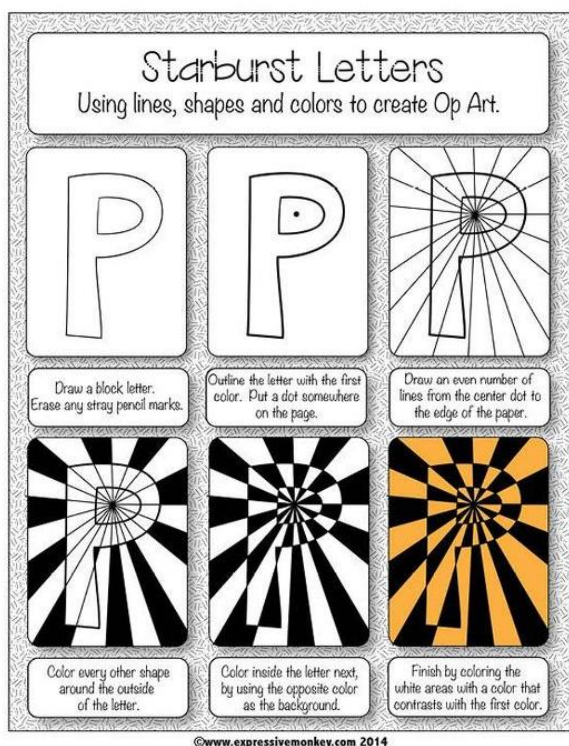

- Look at the optical illusion hearts below.
- See how different lines across the hearts can create interesting designs with black and white.
- Your teacher will give you one to work on, please do not draw in the book.
- Draw your own optical illusion heart or colour them in your own unique way.
- You can be as creative as you want.

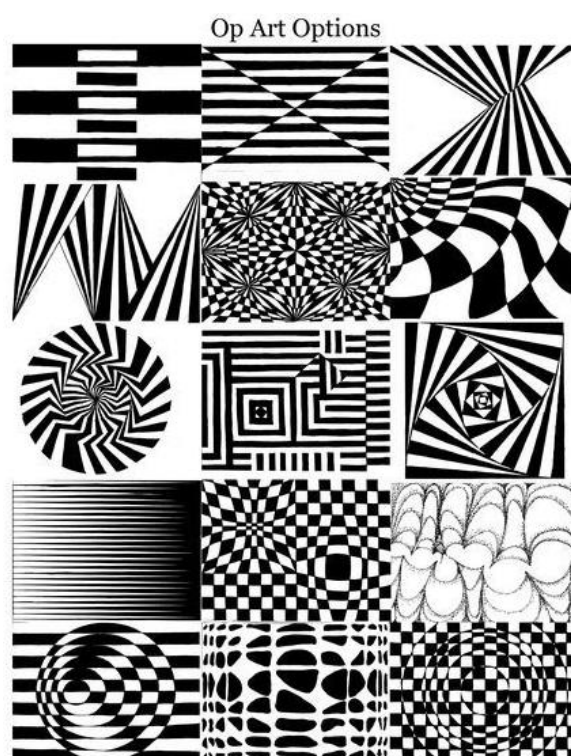

Activity 3.2

- Look at the examples below.
- See how different lines and colours can create interesting designs and illusions.
- Your teacher will give you a page to work on, please do not draw in the book.
- Draw your own optical illusion with the first letter of your name.
- You can be as creative as you want.

Example of the letter **P**

Here are some other ideas

Chapter 2

Create in 3D

At the end of this activity, you will be able to:

- Build and or put together their own canvas frames.
- Stretch the canvas over the wood frame.

Tutorials

<https://www.instructables.com/How-To-Build-A-Custom-Sized-Stretched-Canvas/>

<https://www.wikihow.com/Make-a-Canvas>

Resources

Wood Frame

To make a canvas on a wood frame, you will need the following supplies.

You can find these supplies at your school's woodworking workshop, local art store or hardware store.

- A long piece of art canvas. You should get a canvas that is long enough to create your ideal canvas size.
- Four stretcher bars. These are wooden bars that have notches on one end. You should get two stretcher bars that are the ideal width you want for the canvas and two stretcher bars that are the ideal height you want for the canvas, **for example**, 16 x 24 or 11 x 15.
- A hammer or nail gun.
- A staple gun.
- A pair of scissors.
- Acrylic based glue gesso. (an absorbent primer coat substrate for painting)
- A paintbrush.
- Sandpaper.
- Palette paper.

Board Frame

You will first need to purchase either non-buckle board, Masonite, hard board, or birch plywood.

You can find these supplies at your local art store, school's woodworking workshop, or hardware store.

You will need 1,5 cm thick panels.

The sizes of the board should be the size you wish your painting to be.

You will also need:

- Linen or cotton canvas material. This usually comes in rolls and can be found at arts and crafts stores.
- Wood glue, or any fabric glue to glue your canvas to the board. (Atlas paints @ (353 Derdepoort Rd, Silverton, Pretoria, 0184).
- Rotary blade/ carpet knife and/or scissors.
- Ruler.
- Pencil.
- Rubber paint roller.
- Heavy rubber roller, you can also use your hands.
- Paper towels.
- Sandpaper.
- Saw (for Masonite, hard board, and/or birch plywood)
- Brown wrapping paper

Instructions

Wood Frame

Step 1

- **Fit the stretcher bars together.**
- Take one long stretcher bar and one short stretcher bar. Slide the notched ends of the stretcher bars together, pushing with your hands until the two ends side together. They should be flush with each other, forming a diagonal line where the two ends meet.
- Repeat this with the two remaining stretcher bars (wood pieces) until you have built a wooden frame composing of all four stretcher bars.

Step 2

- Tap the sides lightly with the hammer.
- This is to make sure that the sides of the canvas are fitted properly and securely, you can use the hammer to tap the sides.
- Do this on the outside of the wooden frame and tap lightly to make sure the ends are properly joined together.

Step 3

- Cut the canvas to fit the wood frame.
- Spread the canvas out on a flat surface, like as a table.
- Then, place the wooden frame on top of the canvas.
- Gently fold the canvas so it covers the length of the wooden frame and the ends fold over the wooden frame, so the 4 wooden frame pieces are covered by the canvas.
- Use the scissors to make a cut and then use your hands to tear the canvas so the excess canvas comes off.
- Do this by holding down one half of the canvas and tearing the excess canvas off at an angle.
- Repeat this on the other side of the wooden frame until the canvas fits the wooden frame.

Step 4

- Attach the canvas to the frame. Use the staple gun to attach the canvas to the frame.
- Fold over one short side of the canvas so it covers the stretcher bar and then staple the canvas to the stretcher bar. Place one staple on one end, one staple in the center, and one on the other end for a total of three staples.
- Rotate the frame and pull the canvas very tightly on the opposite end.
- Then, attach the canvas to the other short side of the canvas with three staples. Leave the center staple for last.

- Turn the frame to the longer side. Fold the canvas over the frame. You will notice a notch of canvas that sticks out when you fold the canvas over the frame. Use your index finger to gently push in this notch so it tucks into the fold. Then, pull the canvas up as tight as possible and push it down over the frame. Attach the canvas to the frame with a staple over the folded corner.
- Repeat these steps for the other corner, making sure to push down the notch, pull the canvas tightly and fold it over. Secure the canvas with a staple.
- Finish attaching the rest of the canvas to the frame by pulling tightly on the canvas and staple it down. You can put six staples on the longer ends of the canvas to ensure it is secure.

Step 5

- Prime the canvas. To make the canvas smooth, tight, and ready for painting, you will need to prime it.
- Do this by applying acrylic based gesso (primer) to the canvas so it dries stiff and taut.
- Start by shaking up the acrylic based gesso.
- Then, pour the gesso onto a sheet of palette paper.
- Use the paint brush to paint the entire area of the canvas.
- You should do one thick coat of the paint, making sure to get the sides of the canvas as well.
- Let the gesso dry.
- Then, use the sandpaper to sand the canvas. Sand the canvas using small, circular motions. Do one layer of sanding on the canvas and do not worry too much about making it very smooth.
- After one sanding session, pour gesso onto the palette paper and use the brush to add another layer of gesso to the entire canvas.
- You can use a hair dryer to dry the gesso faster.
- Once the gesso is dry, sand the canvas one more time. Try to make the canvas really smooth.
- After a good sanding, the canvas is ready for use.

Instructions

Board Frame

Step 1

- First measure out, using a ruler and pencil, the size of your board. You can draw lines directly onto the board. Try and make sure to use the back of the board, this way your pencil lines will not appear on the front.
- When you are done you should have a rectangular / square shape outlined on the board.
- Cut the board to the size you want.
- If your board is Masonite, hard board, or birch plywood, you will need to use a rotary saw to cut it down to size. Cut along the lines that you drew on the board.
- Make sure that you are in a safe area, like outside or in your workshops.
- Always wear goggles when cutting, and make sure that your hands do not get near the blade.
- No matter what board you are using, after it is cut, sand the edges down gently so that they are smooth.

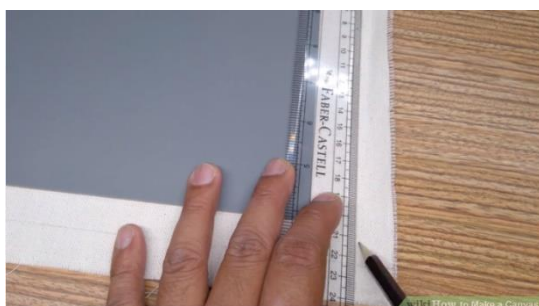

Step 2

- Place the canvas material underneath the board.
- Outline a blueprint to cut along, approximately 2.5 cm longer than the board on each side. You can do this with a simple ruler and pencil. If your canvas material has two sides (one for show, one for backing) make sure you are drawing pencil lines on the side meant for backing.

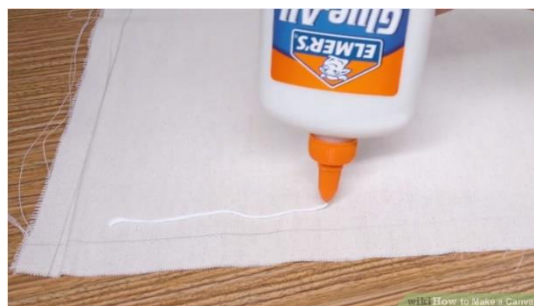

Example: If your board is 20 X 30 inches, the rectangle you draw onto the canvas should be 22 X 32 inches.

- Lift away your canvas.
- Cut the drawn rectangle out with either a pair of scissors or a rotary blade.
- If you use a rotary blade, make sure that you are cutting on top of a safe surface such as a cutting board.

Step 3

- Glue the canvas and board. Take some of your glue and pour it onto the middle of the canvas sheet.
- Take out your rubber paint roller and begin spreading the glue around the sheet. Try your best to keep the glue contained within the drawn lines.
- Then pour some glue onto the middle of one side of your board.
- Take the same roller and begin to spread it around.
- The corners and edges are especially important.
- The glue spread over both surfaces should be a relatively thin layer.
- Do not pour too much otherwise it will ooze out the sides when you place them together.

Step 4

- Combine the canvas and board. Take your board and flip it over. Press the glued side of the board against the glue side of the canvas (on table, facing up).
- Line up the board as best you can with the drawn rectangle on the canvas.
- Then, take your heavy roller out and begin to run the roller against the board. This will get the air bubbles out that are likely to be present between the canvas and board.
- While you are rolling the board, you may have to move it because the board might slide.
- After you have rolled against the board, press down with your hands. Place pressure firmly and evenly all over. This will further secure the board to the canvas.

Step 5

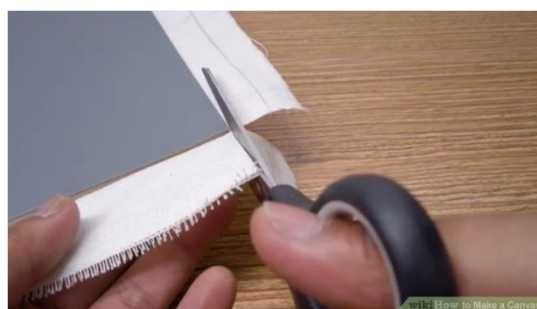

- Put books on top of your board. Place heavy books on top of your canvas so that they cover the entire space.
- Then begin to stack other books on top of them. You can even add other heavy objects like a paper weights or bricks. This pressure needs to be created for the canvas to seal with the board.
- If you have not already done so, move your stack to a safe place.
- This should be somewhere where there is not a lot of movement going on.
- Your canvas will need an entire day to properly dry and set. Only the following day (after 24 hours) can you remove the books/weights.

Step 6

- Cut the corners of the canvas material.

Option 1

Do so by cutting a diagonal slice into the canvas in line with each corner of the board. Then fold each side of the slice so they are lying on top of each other in a perpendicular manner. One option to get them to remain pulled back is to apply some super glue to the underside of the canvas edges. Then press each edge, one at a time, against the edge of the board. Hold each edge for at least 1 minute.

- If you use the glue method, make sure that the glue is spread evenly over the entire strip so that it does not begin to peel away.
- The second method is to use sewing pins. Curve your edges backwards and stick two to three pins on each side, through the canvas and into the board. This method only really works on Gator Board; however, you can try to tick the pins into a harder surface.

Option 2

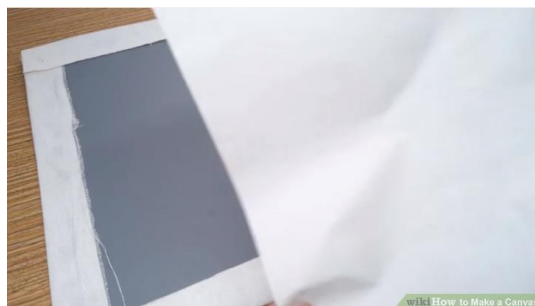

- Take your rotary blade and cut the canvas as close to the board as you can possibly get it. Make sure that you are cutting on a safe surface such as a cutting board. Depending on the thickness of the canvas you may have to pass over the same area multiple times in order to cut it.

Step 7

- Create a backing for your canvas.
- Outline and cut a sheet of brown wrapping paper about 1.5 cm smaller than the actual size of the mounted canvas on each side.

Example: If your mounted canvas is 51 x 76 cm, the brown wrapping paper should be 49,5 x 75 cm.

- Simply use a ruler to measure the edges and draw out the sizes onto the paper using a pencil.
- Then cut with either scissors or a rotary blade.

Step 8

- Attach the backing to your canvas. Make sure that the canvas fabric is facing down.
- First, pour some glue onto the back of the board. Spread it out evenly using your paint roller.
- Then take your brown wrapping paper and press it against the glued board.
- Use your heavy roller and roll against the brown paper. Make sure that there are no air bubbles left over.
- Put two heavy books on top of the brown paper so that they cover the entire space. Put other heavy books and/or objects on top of those two books.

Step 9

- Allow the canvas to dry. The canvas should once more be kept in a safe space.
- Place a heavy book or weight over the canvas.
- Wait 24 hours before you remove the books and/or objects.
- Once the canvas is dry, it is ready for use.

Chapter 3

Create in 2D

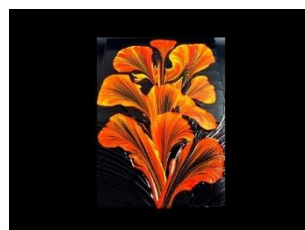

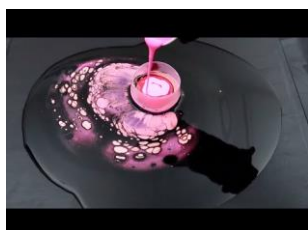

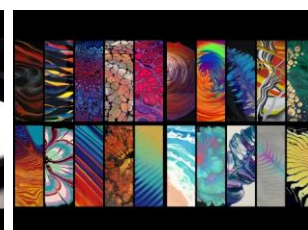

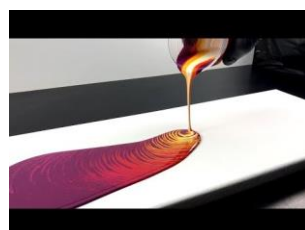

At the end of this activity, you will be able to do the following:

- Watch a few tutorials on how to do Acrylic Pouring
- Know the basics of Acrylic Pouring.
- Know which equipment to use when doing Acrylic Pouring
- Using the basic methods to create an Acrylic Pouring Art pieces.

Watch the following Tutorials on how to do Acrylic Pouring:

(You need to try different techniques)

Acrylic Pouring

Acrylic Pouring is a relatively new art form, which has its origin in the USA and finds more and more followers all over the world.

It is a fascinating fluid painting technique.

It is created with acrylic paint, which you make into a

liquid, pourable consistency with the use of pouring medium and other additives as required.

Depending on how you do it, this liquid (runny) paint is then poured into/onto each other or poured onto the canvas and moved around by tilting the painting. Depending on the choice of the colour, the medium and the additives, different effects are created.

The result is a unique work of art that can almost never be reproduced again. One of a kind!

There are uncountable possibilities, starting from the colour combinations, different acrylic colours from different manufacturers, as well as various additives and of course the techniques.

Here are some of the reasons why Acrylic Pouring is an excellent art idea:

- It is easy! You do not need any previous drawing or painting skills. From young to old everyone can enjoy in this hobby.
- You only need a small number of supplies to start pouring acrylic.
- It is quick! You do not need to spend the whole day on one painting. You can pour a painting in 30min.
- It is FUN.

i <https://feltmagnet.com/painting/How-to-Do-a-Pour-Painting>

<https://malen-lernen.org/acrylic-pouring-anleitung/>

What do you need for Pour painting?

The main components for the Acrylic Pouring are:

- Acrylic paint
- Pouring Medium (Could also be a mixture of glue and water)
- Canvas / Board
- Tools such as a pallet knife, ice cream sticks, cups & paint brush
- Plastic to protect your surface
- Aluminium container / Box / Big plastic container (For your paint to drip in)
- Depending on your needs, you can add further additives such as silicone oil for cell formation

How do we do it?

- The acrylic paint is mixed with the pouring medium and given extra additives like silicone oil. (The paint should flow well but is not too thin.)
- Then this colour mixture is poured onto the painting canvas. (The way you pour it, will depend on the technique you are using)

Step 1

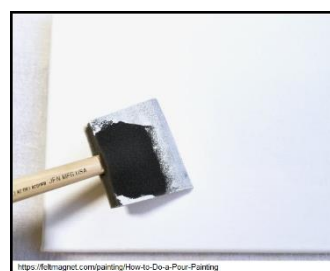

Workplace preparation:

- Protect the work surface and floor with a plastic sheet. (Dried paint splashes and stains are difficult to remove, and the acrylic flow technique can be messy.)
- Have all your equipment ready so that you always have everything on hand.
- Put on gloves so that you do not have your fingers full of paint.
- Make sure that your work surface is level.

Step 2

- Paint the whole canvas / board white or black.

Step 3

Mix the colours with the pouring medium.

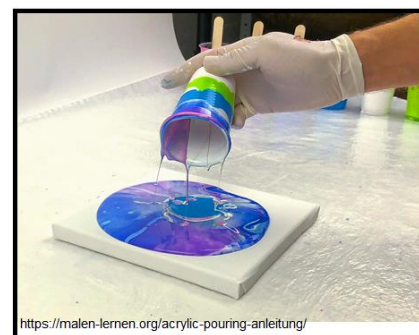

- Use a cup or container of your choice.
- Pour some acrylic paint into it and then, depending on the pouring medium you use, pour in the same amount or twice as much of the pouring medium.
- Mix the whole thing carefully until it all looks the same.
- The mixture should look like liquid honey. If the mixture is too thick, you can also add some water and mix everything again.
- Leave these mixtures to stand for a while so that all the bubbles can rise to the top.

Step 4

Now you can start with the actual pouring, here is an example of the **Flip Cup** Technique

- Take your cups with the pouring mixture and pour them one after the other, into a new, larger cup. The aim is that all colours form layers on top of each other.
- Take your big cup and hold it over the middle of the canvas without any paint spilling out.
- Tip the cup over, very carefully, so that the paint pours out.
- Move back and forth in a very small circle until all the paint has run out of the cup.
- Take the canvas in your hand and tilt it from side to side, to spread the paint on the canvas.
(Do not forget the sides of your canvas, these should also be covered with paint)
- Make sure that the canvas lies flat and straight.
- Let the painting dry for a few days.
(If possible, in a room that is not too hot and dry to avoid cracks.)

The **Flip Cup** technique is only one of many, pouring techniques. If you watch the YouTube Videos, you will get some great ideas of which techniques you would like to try.

You have been introduced to Acrylic Pouring art, now you are going to make your very own art piece. Look at the Rubric to see what your artwork will be assessed on.
HAVE FUN!!!

Activity 4

Rubric

Acrylic Pouring

Criteria	5	4	3	2	1
Art elements	Learner was able to use all art elements and the artwork is exquisite.	Learner used all art elements, and the artwork is very good.	Learner used most of the art elements, and the artwork looks good.	Learner used some art elements, and the artwork is satisfactory.	Learner used no or minimal art elements.
Marketable	Artwork will definitely sell.	Most people will want to buy the artwork.	Some people will buy the artwork.	The artwork is unpopular with buyer.	The artwork is not suitable to sell.
Design principles	Used all principles in the correct way with stunning end results.	Used all principles in a very good way and end result is good.	Used most principles and the result is relative good.	Used some principles and result is satisfactory.	Minimal principles and finished product was of low quality.
Skills	Excellent skills development	Good skill development	Relatively good skills development	Some skills were developed	Very little to no skills.
Productivity	Learner was able to complete more than three art pieces.	Learner produced more than two art pieces.	Learner produced more than one art piece.	Learner produced only one art piece.	The learner was not able to complete one art piece.
Detail	All details can be seen.	Artwork details were good.	Artwork details are satisfactory.	Learner was distracted in some of the methods.	Learner was not able to use all components to its fullest.
Method	Learner was able to apply different methods in an excellent way.	Learner was able to apply different methods in a good way.	Learner could apply a basic method successfully.	Learner could apply a basic method.	Learner was unable to apply a basic method
