

Electrical Maintenance

Soldering

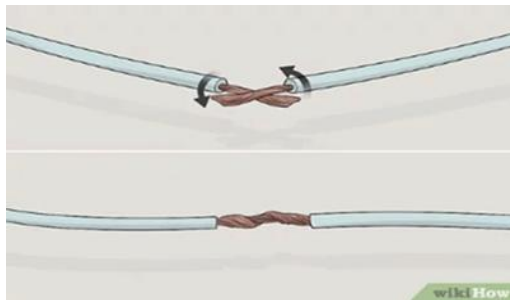

Purpose : It is any various fusible alloys to join metallic parts.

Step 1 : Splice the wire

Purpose : To strip insulation off the end of the wire.

Step 3 : Twist the ends of the wires together.

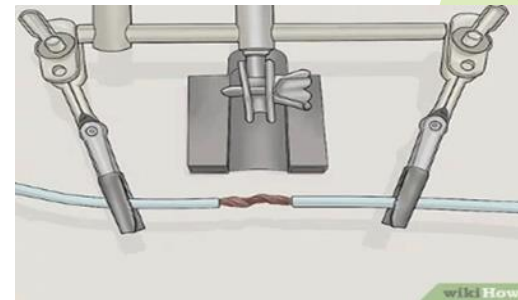

Purpose : To combine them.

Step 2 : Slide a piece of heat-shrink tubing onto one of the wires.

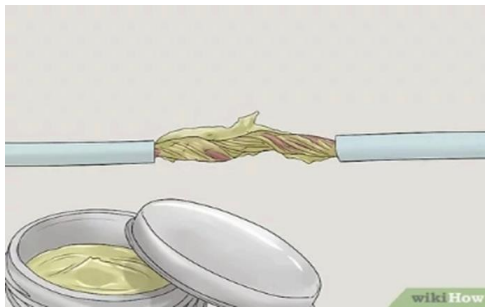

Purpose : To cover the splice of the insulation later on

Step 4 : Clamp the wires in alligator clips.

Purpose : To keep them off your work surface.

Step 5 : Put rosin flux on the spliced wire.

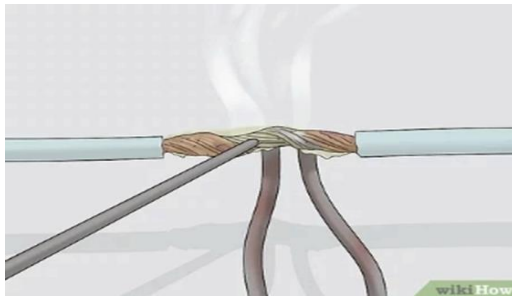

Purpose : To help the solder adhere better.

Step 7 : Melt solder on the tip of your soldering iron.

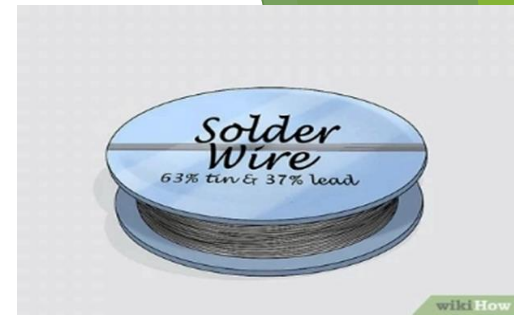

Purpose : To prevent oxidation

Step 9 : Run solder on top of the wire.

Purpose : To melt the wires.

Step 6 : Get solder.

Purpose : Easy material to use.

Step 8 : Hold soldering iron against the bottom of the splice.

Purpose : To heat the flux.

Step 10 : Let the solder to cool down.

Purpose : To solidify

Marks : 10

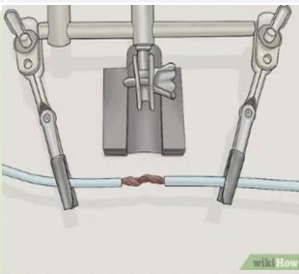

Time : 30 mins

Question:1

1. How to solder wires?

Complete the table below:

Stage	Picture	Activity	Purpose
1		Splice the wires.	
2		Slide a piece of shrink-heat tubing onto one of the wires.	
3		Twist the ends of the wires together.	

Stage	Picture	Activity	Purpose
4		Clamp wires in alligator clips.	
5		Put rosin flux on spliced wires.	
6		Get 63/37 solder.	
7		Melt solder on the tip of Soldering Iron.	
8		Hold Soldering Iron against the bottom of the splice.	

Stage	Picture	Activity	Purpose
9		Run the tip of the solder on top of the wire.	
10		Let the solder cool.	

How to wire a Lamp.

Connecting The Wiring for New and Old Lamps.

Step 1 : Remove the lamp shade and bulb.

Step 2 : Remove the harp.

Step 3 : Remove the lamp's protective base.

Step 4 : Loosen the socket.

Step 5 : Pull the wires out of the lamp.

Step 6 : Remove the socket from the shell.

Step 7 : Push new wire inside the socket.

Step 8 : Attach new wire.

Step 9 : Assemble the socket and the lamp.

Step 10 : Switch the lamp on.
